

Headphones Mindset

Mindset

HEADPHONE

FOR

SCATTERED

Many people experience trouble concentrating regardless of whether they work in the office, at home or at a table in a café. And no matter how long you concentrated on your task, you'll definitely want to improve to do even more. Probably a new start-up Mindset will help.

The Mindset is a headphone from Canada.

The main difference is that the device monitors brain activity by using 3 sensors, and reminds him that he was distracted from his task.

If the owner suddenly gets distracted from work, the headphones notice this and use a beep that makes it clear that they need to return to work.

Also, if the user is too long to work without interruption, the device itself will prompt him to distract.

Of course, these headphones can work as intended - you can listen to music. The sound I assure you is excellent.

For the music component to the company Onkyo is a Japanese company of audio equipment. The sound transmitted by cable or Bluetooth 4.2.

With a battery can «live» 8 hours of continuous music listening and data transferring.
