# GOAT

- Goat is one of the first domesticated animals. Domesticated in the middle East. Most males and females have a beard, and the body is covered with straight hair. Its length and quality depend on the breed.

# THE PROTECTION OF ANIMALS

- ❑ To strengthen environmental protection, to protect animal habitats from pollution and destruction.
- ❑ To prevent the poaching of animals-
- ❑ It is necessary to establish limits on the use of animals, particularly fisheries, hunting
- ❑ The most effective form of animal protection — creation of wildlife refuges and nature reserves.

- People, please be kinder to animals! They also live, they suffer from the heat in summer, in winter from the cold, from hunger, from bad attitudes, there are people who specifically mock them, or catch. The problem is that their reproduction is not controlled ,the number of animals increases ,but it turns out that they are not wanted, or no money to feed them, so people throw them away or get rid of them
