ссылке:

<http://goo.gl/ZQ3iOG>

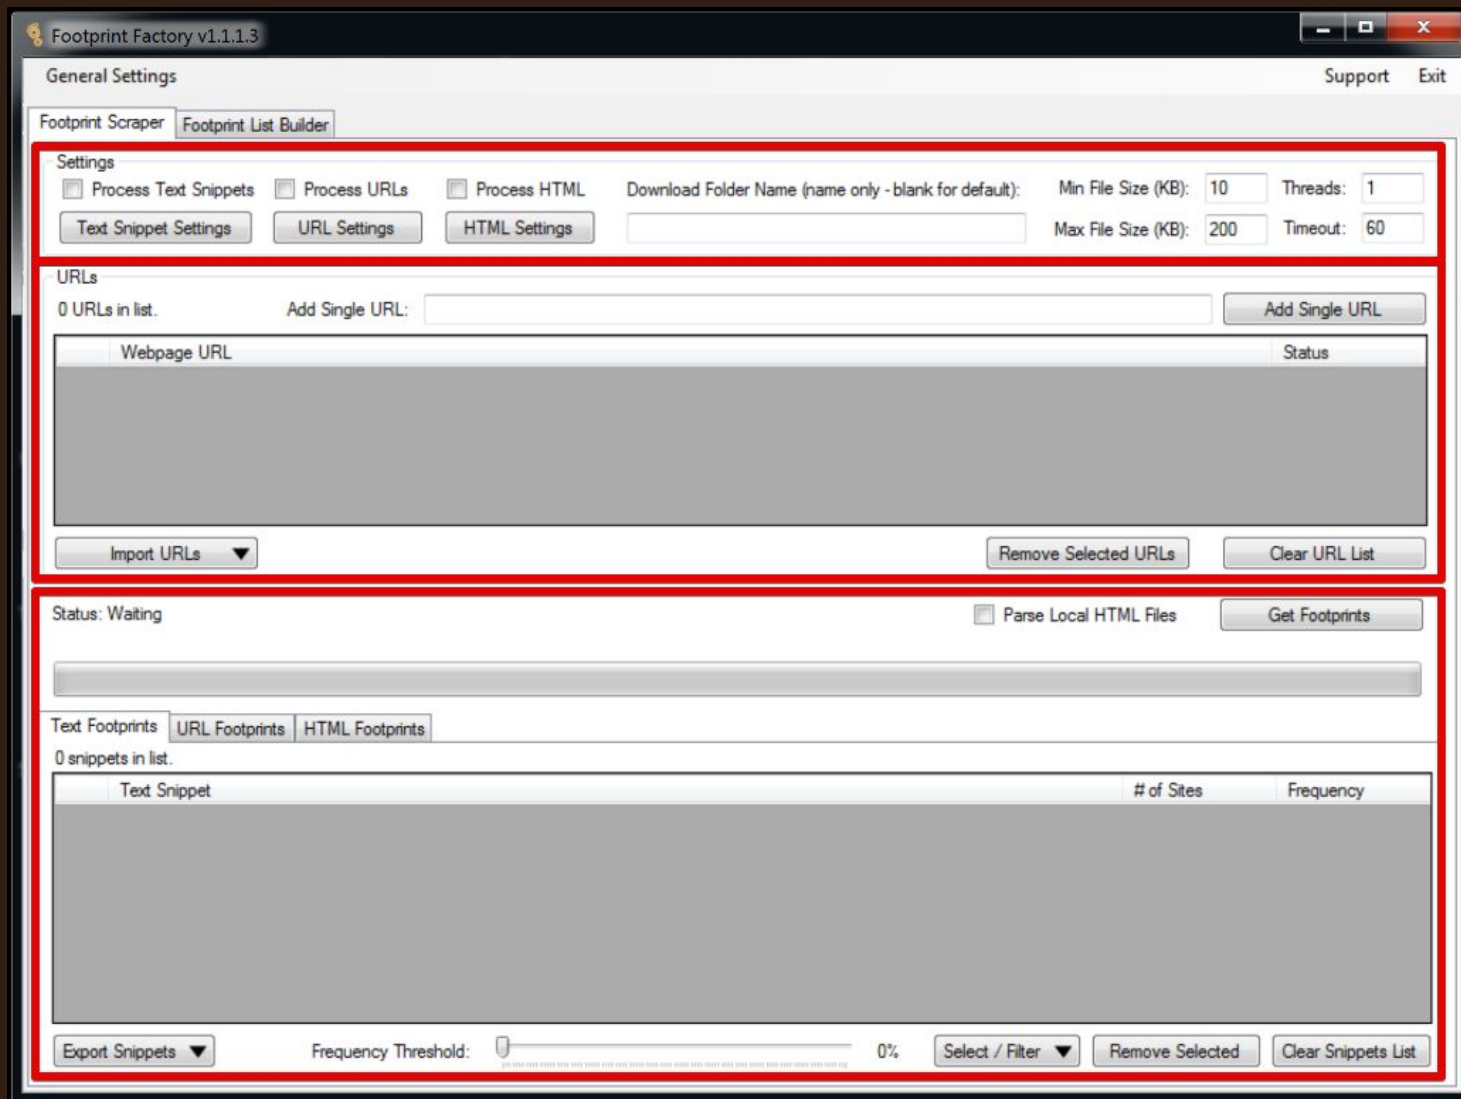

Какие проблемы решаем

- ✓ Как искать бесплатные тематические доноры
- ✓ Как спалить чужую сетку сайтов в вашей нише
- ✓ Как обезопасить свою сетку сайтов от аффилирования и других сеошников.

Основные возможности Footprint Factory

- ✓ Скачивает веб страницы
- ✓ Находить и считать текстовые сниппеты
- ✓ Находить и считать составляющие URL
- ✓ Находить и считать HTML сниппеты
- ✓ Подготавливать футпринты для парсинга в поисковиках

Footprint Scraper

General Settings

General Settings

Scraper/Parser Default Settings

HTML Download Directory: \\psf\Home\Downloads\FootprintFactory\html\ Select

Default Export Directory: \\psf\Home\Downloads\FootprintFactory\export\ Select

Default Minimum File Size (KB): 10 Default Maximum File Size (KB): 200

Default Threads: 1 Default Timeout (seconds): 60

Filter out javascript code when saving HTML (helps avoid triggering anti-virus)

Footprint List Builder List Refresh Frequency

Footprint List Builder list will refresh after every 100 footprints generated.

Minimum Maximum

This setting controls how many footprints the List Builder will generate before refreshing the output list. A lower refresh frequency means that the list will update more often, which is better for UI stability. Increasing the refresh frequency will make the List Builder work faster, but will also cause the UI to be less stable while generating footprints. Results may vary depending on your systems resources.

Automatically check for updates when program starts Save Settings

Text Snippet Scraper Settings

Text Snippet Scraper Settings

Minimum Snippet Length: Characters Replace Numbers with *

Maximum Snippet Length: Characters Treat Pipes as Snippet Separators

Minimum Frequency: Percent Filter Out Characters:

HTML Tag Separator Exceptions

| HTML Tag | Is a Separator |
|------------------------|-------------------------------------|
| <!-- Comments--> | <input type="checkbox"/> |
| <a>... | <input type="checkbox"/> |
| <abbr>...</abbr> | <input checked="" type="checkbox"/> |
| <address>...</address> | <input checked="" type="checkbox"/> |
| <area> | <input checked="" type="checkbox"/> |
| <article>...</article> | <input checked="" type="checkbox"/> |
| <aside>...</aside> | <input checked="" type="checkbox"/> |
| <audio>...</audio> | <input checked="" type="checkbox"/> |
| ... | <input type="checkbox"/> |
| <base> | <input checked="" type="checkbox"/> |
| <bb>...</bb> | <input checked="" type="checkbox"/> |
| <bdi>...</bdi> | <input checked="" type="checkbox"/> |

Any HTML tag can be treated as a "separator". For example if all HTML tags are enabled as separators, then this line of HTML:

this is <i>just</i> an example

Would be split into 3 separate snippets:

1. this is
2. just
3. an example

If you were to uncheck the <i> tag as a separator, then it would consider the example above to be a single snippet:

1. this is just an example
