

# Smart Glasses

# Additional Reality

Imagine, a person walking along an ordinary street, glasses in his eyes, looking at a certain object, information is coming up, the device is talking actively with its owner, telling the information of this object and showing before the eyes the physical component of the object.

A familiar picture is in the movie Iron Man

# What happens when you turn on this device?

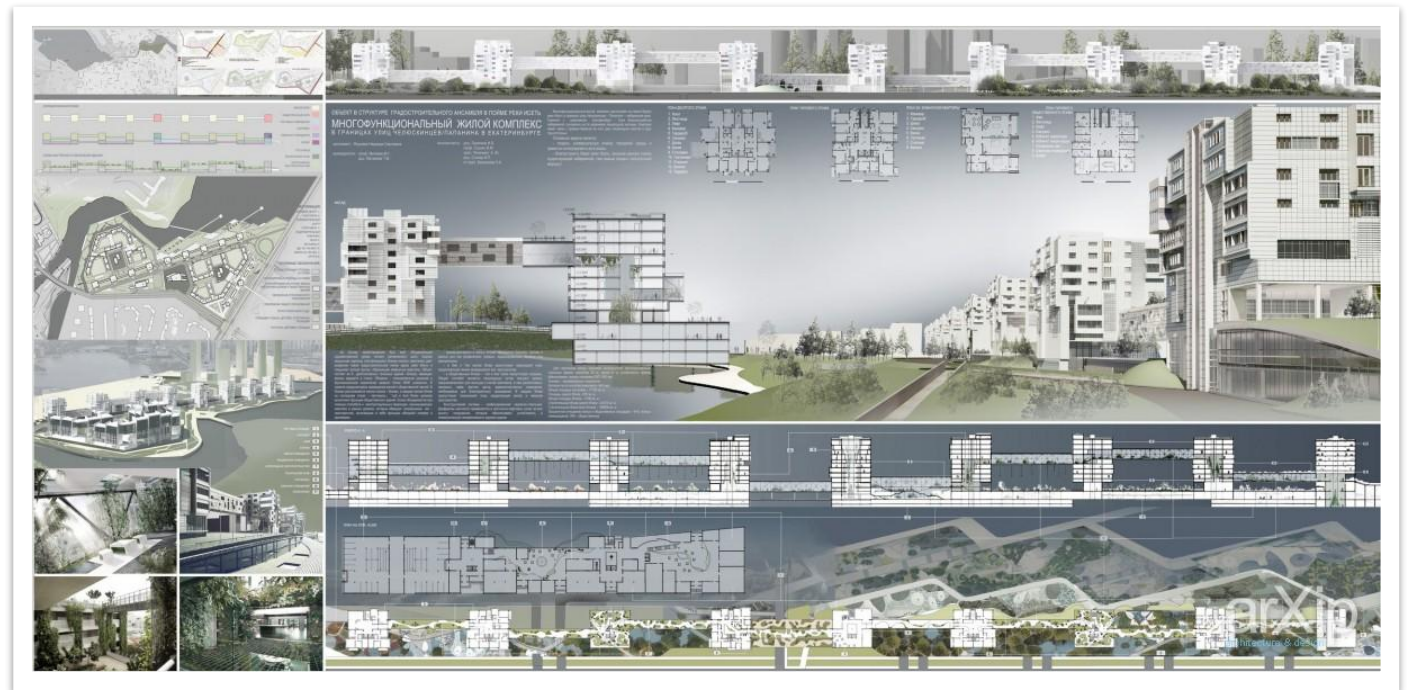

**The owner will have a virtual friend who will conduct the conversation through special headphones, men and women will have the opportunity to switch to male or female voice, when enabled, it will greet you by name and inform you of the information that you need, such as weather for street, what day it is today, etc.**

# What can provide you these glasses?

For example, you walk down the street and see an apartment complex and want to know its characteristics, such as:

- the year of construction of this dwelling
- how many floors?
- how many apartments?
- are there available apartments?
- price of apartment
- area
- condition
- security
- in which district it is located
- which are nearby institutions, shopping centers, etc.

These glasses will provide all this information.

Thanks for watching
