

FIRST AID GUIDE

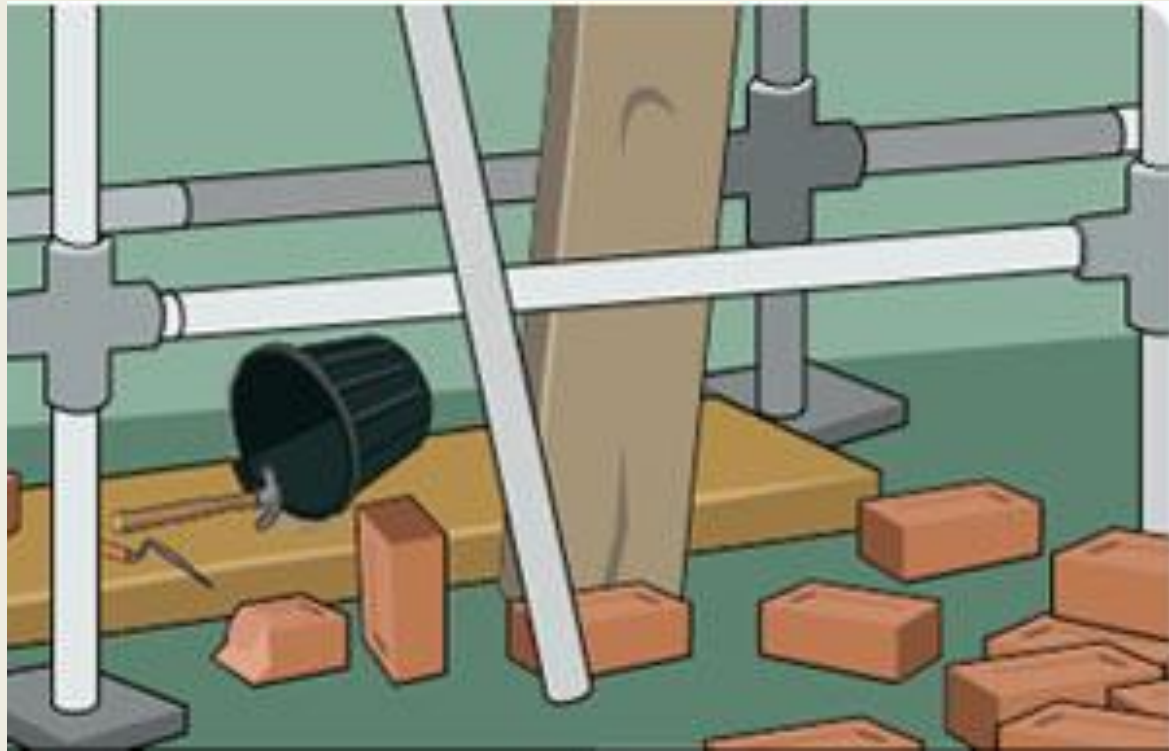

Scaffolding at a building site has collapsed, injuring three workers.

Question 1:

What should your priority be?

- A. Assess the casualties you want to start helping
- B. Ring for emergency help - you need expert medical help
- C. Assess the scene for danger - you don't want to get hurt

Question 2:

After checking for danger, what should you do next?

- A. Assess the casualties you want to start helping
- B. Ring for emergency help - you need expert medical help
- C. Look for people who are losing blood

Question 3:

There are three casualties on the ground.

Having made sure the site is safe, which casualty should you help first?

- A. The one with a bad leg injury, who's losing a lot of blood
- B. The conscious casualty who's moaning and obviously in a lot of pain
- C. The quiet casualty who's laying face up - you can't even tell if he's breathing
