

# WHEN DID PEOPLE COME TO EARTH?

PREPARED BY : SEIDALKHAN NAZIYA

# THE PURPOSE OF MY TALK IS TO ILLUSTRATE THE PURPOSE THE APPEARANCE OF THE FIRST PEOPLE ON EARTH

- Almost every person on Earth has asked the question: "How did we come to this planet? Who are we and where are we from?)"
- The theory to completely remove all the veils from these secrets so no one succeeded, because neither philosophers nor scientists have been unable to prove at least one theory of the origin of people is not something that the 100 and even 80 percent

# NOW I WANT TO DESCRIBE THE DEVELOPMENT OF THE IDEA.

- There are three versions to consider how the first people on earth appeared.
- At first, absolutely scientific, formulated several centuries ago by the English scientist Charles Darwin.
- It is also known as the theory of evolution. According to her, intelligent man descended from the higher primates. The main changes of the species occurred as a result of a long process-natural selection.

- Secondly, religious or theological (theological). Here everything seems to be simple-God created people. As the Book of books says, that is, the Bible, the first people (Adam and eve) were made of clay by the hands of the Great Creator. Representatives of many religious denominations support it, even with some variations.

# WHERE AND WHEN DID THE FIRST PEOPLE ON EARTH APPEAR?

- Let's move on to the next part, which is the question of when and where the first people on Earth appeared.
- 1. Homo sapiens - "Homo sapiens" was formed about 50 thousand years ago in the area of the Great rift faults in East Africa.
- 2. About a million years ago, Africa, Asia and Europe were inhabited by the most ancient species of people, Homo erectus (Homo erectus).
- Later, Homo heidelbergensis.
- About half a million years ago in Asia Neanderthals

# CONCLUSION

- I'd like to finish with word God created us and I believe .
