Fast facts about Bitcoin

- 1 Has no command center. Operates due to a huge community.
- 2 Can't be banned! Breakdown of a single network block doesn't influence the network as a whole.
- 3 Can't be disposed/retained, since only the owner has access to it.
- 4 Isn't associated with a person. The wallet key and address are generated automatically.
- 5 Transaction can't be banned, cancelled; it's impossible to change its amount or influence it in some other way.

Why Bitcoin in particular?

No inflation

Bitcoin can't be printed like paper money, thus causing inflation. In fact, new coins are produced, but this is a controlled process, since production schedule was initially built into the code and can't be changed in future.

No transaction limitations; in other words, you can transfer BTC worldwide, and no one will be able to track your transaction.

Minimal fees

You can add any amount, whether it's 100 dollars or 100 million dollars, the fee won't exceed 1 dollar or even less 😊

It just happened that Bitcoin is the most popular cryptocurrency in the world. Its capitalization keeps growing every day, and we in turn augment our funds due to the exchange rate against dollar, euro, or any other currency.
