Augusta Ada King  
is an English  
mathematician. It  
is known  
primarily about  
the creation of a  
computer  
machine, which  
was developed by  
Charles Babbage.

- He was the only legitimate boy of the English poet George Gordon Byron and his wife Anna Isabella Byron. After the mother and parents never called this name, they called Ada. Various biographies say that they occupy the first place in life, even in marriage; she never knew a single parent.

- June 5, 1833, they first saw each other. Charles Babbage at the time of their acquaintance was a professor at the Department of Mathematics at Cambridge University. Later, she met with other outstanding personalities of that era: Michael Faraday, David Brewster, Charles Wheatstone and others.

- In the end, you can make calculations to the twentieth digit. A drawing with numerous rollers and gears, which are set in motion by the Prime Minister. In 1823, the first subsidy was made for a computer post called the Babbage Analytical Machine. Construction lasted ten years, and construction in 1833 was discontinued.

- In 1842, the Italian scientist Manibera met with an analytical machine, was delighted and made the first detailed description.
