Managing and Presenting With **Picasa** and **PicasaWeb**

This presentation can be reviewed at:

<http://staff.beaumont.k12.tx.us/gloker/picasaintro.htm>

What is it?

- It's a photo album organizer turned photo editor, with a Web Album component
 - Having tried nearly a dozen computer based and/or on-line galleries over the years, each with their pluses and minuses, Picasa is one of the easiest to keep up with your photos no matter WHERE they are on your computer and sync with an online album.
- It's easy to use and learn
 - Having used Photoshop since version 1.0 in 1990, I am still learning and figuring things out with it.
 - With Picasa, in a matter of minutes, not hours, you can fix and upload your photos.

What's NOT...not a social place

- This is exactly what you have been looking for when you do NOT want to have to worry about posting your favs and chit chatting about 20 year old photos, or who wrote on who's wall, or who is in your top 8 or 80 spaces.
 - BUT, it does have a handy **Facebook** uploader.
- Picasa is about keeping up with all of your personal photos, with quick and easy tweaking and ability to get pictures online quick.
- Seamless integration between your desktop and an online album

But it does have some Social Networking

(with Picasa Web)

- Link to favorites
 - Choose to show or not show each favorite on your page for guests to see when they visit your page)
- Keep track of favorites activities.
- Tag people with names (very intuitive) allowing you to view a gallery for just that named person.
- Track comments left for your photos.

Organization

- One of the challenges with a digital camera is the large number of images you will accumulate.
 - Notice 44k...not including weddings, school or church photos.
- In the old days, with prints if you wanted a picture to be in two places, like on a refrigerator and an album, you just made two prints. Of course you can still do that today.
- But how can a digital file be in two places at the same time. Well, it can't unless you use a program like Picasa which categorizes every picture on your computer, and then allows you to create **Virtual Albums**.
 - Virtual Albums help you keep up with your favorites and allow for easy sync with your web album

Getting Started

First Launch

- ONLY scan My Documents, My Pictures and the Desktop.
- The top option will scan the entire computer, which you may need to do if you have lost some images...but this will also add items from inside the Windows folder on the C drive and you will spend a lot of time removing stuff.

Photo Viewer Configuration

- You MAY not like what Picasa does, but I think it is a wonderful way to browse your images even before you launch Picasa
- Go ahead and Select All...you can always change it later.

Managing Your Folders

- Go to Tools, then Folder Manager
- Scan always any folders with pictures
 - Avoid Network Drives
 - Try to add a root of pictures rather than an individual folder

Folder List

For each folder, you can choose whether or not to have Picasa find pictures inside it. You can also pick folders to watch for new pictures.

For P:\

- Scan Once
- Remove from Picasa
- Scan Always

Watched Folders

Path

- C:\Users\Public\Pictures\
- Desktop\BCC\
- My Pictures
- P:\Pictures\2002\
- P:\Pictures\2003\
- P:\Pictures\2004\

Help

Creating Virtual Albums

- Click on a photo that may need to appear in more than one album or samples from one particular shoot.
 - Add to album – the first time you will need to create the album.
 - Afterwards, you can click and select or drag and drop.

Managing Your Folders

- Edit folder descriptions to force pictures to stay current, like a folder of edits. (2x click)
 - Folders with new images will be bold.
 - Sometimes with really larger number of folders, a new scan may put a folder way back in time because of a date stamp on one of the images or the folder.

Managing Your Folders

- Finding your images and folders is only a Click away.
 - **Enter** – takes you into the Picasa View and Edit mode
 - **Ctrl + Enter** – Locates on the disk
 - **Locate in Picasa** is also an option if in an album

Editing

- Although some people would not want to invalidate a photo by altering it with a pixel editor like Photoshop, it is prudent to adjust certain aspects of a photo much like you would do with Film in a darkroom or photo lab.
- Picasa allows considerable control with very little risk to the original file.
 - In fact, changes can be made to an image in Picasa and retained with out EVER saving the changes to the file.
 - If changes are saved, they can be UNDONE
- As a general rule get it right in the camera. But, Picasa makes it easy to make minor adjustments with out leaving your browser.

Editing

- Duplicate a file if you really want
 - Save As
 - Save a Copy
- Lots of ways to get your original back
 - Undo All Edits
 - Revert
 - If you have saved, you can either Undo the Save, or Revert.

Editing

- Undo All Edits
- Lots of warnings

Editing

- Copy all Effects
 - Tweak one picture, like a color cast, or B&W with a boost to the contrast, then apply changes to several similar files.
- Example:
 - IR Shoot...change all images to black and white boosting contrast to a dozen images too only a couple of minutes.

Editing

- 3 Main tabs with lots of automation in several of the options
 - One click fixes...pretty intuitive. Even the cropping does a pretty good job of trying to figure out what would be best for you.

Editing - Straightening

Editing – Auto Red Eye Fix

 Redeye Repair

Picasa has found and corrected red eye(s).

Note: You can click on a box to delete a change.

You can also draw a square around any red eye that Picasa may have missed.

Editing - Retouching

- Don't expect a miracle here...but MAJOR improvement over none at all
 - Just the thought of cleaning a sensor makes me start to sweat...so the ability to get a quick fix is very nice.
 - This will take a little getting used to if you have used Photoshop's Clone tool. Remember, Picasa is not to replace a program like Photoshop...just offer a quick way of tweaking a photo with out really opening the photo.

Publishing

- Picasa is a great way to get your work published onto the web via a Google account and PicasaWeb
 - Images can be tweaked on your computer with out saving to the original (or even creating a 2nd file) and instantly uploaded to the internet.
 - Changes made later to the local file, even if still unsaved, are uploaded as updated to the files already in your PW gallery.
 - I.e. you upload a file...then a day later, you make it Black and White, or crop it, or fix the red eye or whatever, simply right click and Update File Online...and it is done.
