

History of communication development.

Made by:
Aksenov Stepan
Ivantsova Katherine

The bonfires

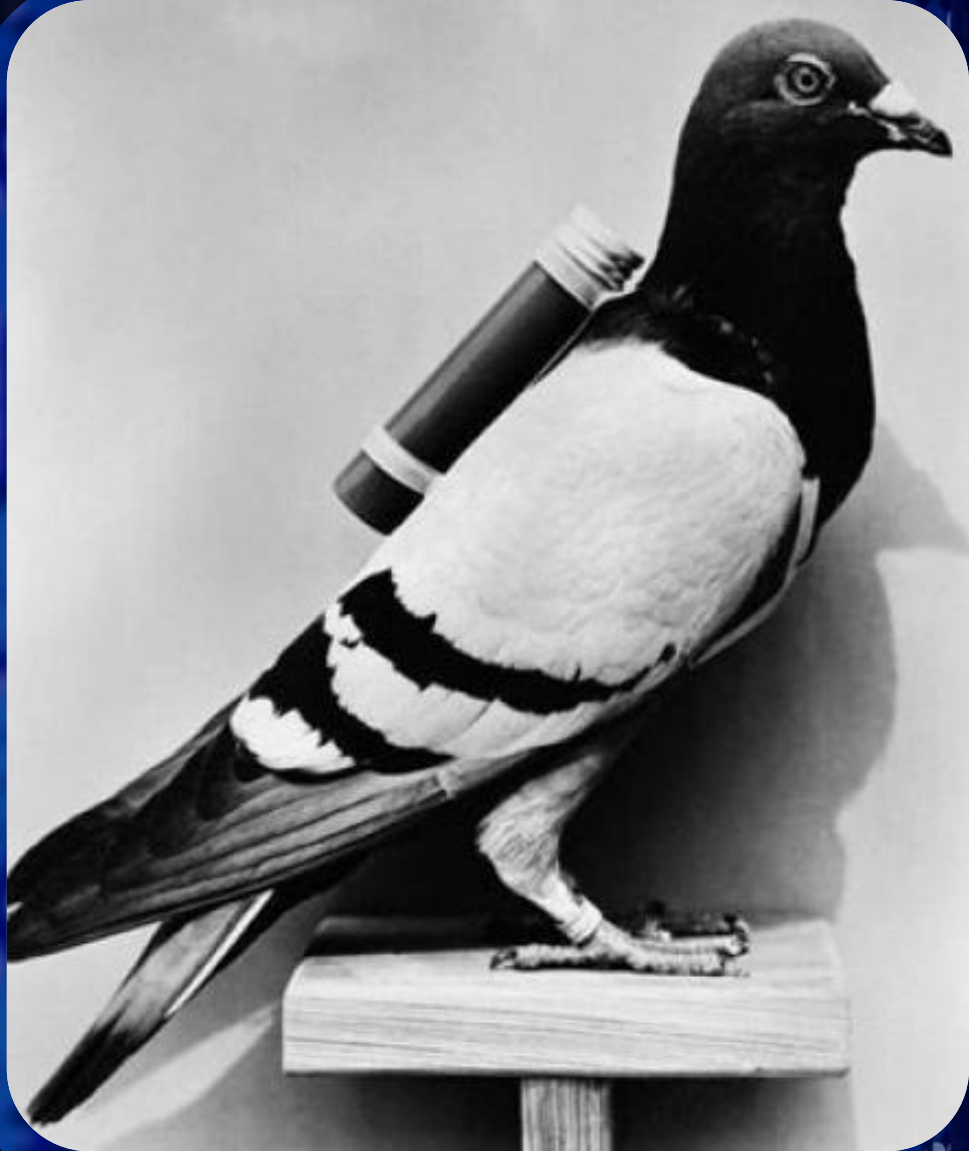

The horse was the first most actively and effectively exploited means of facilitating the faster establishment of mass communications.

The invention of the wheel and its application in the design of the cart made it possible to improve the communication process.

To increase the distance of communication was used a messenger or a courier.

The invention of the postal communication.

The telegraph, invented in
the 19th century

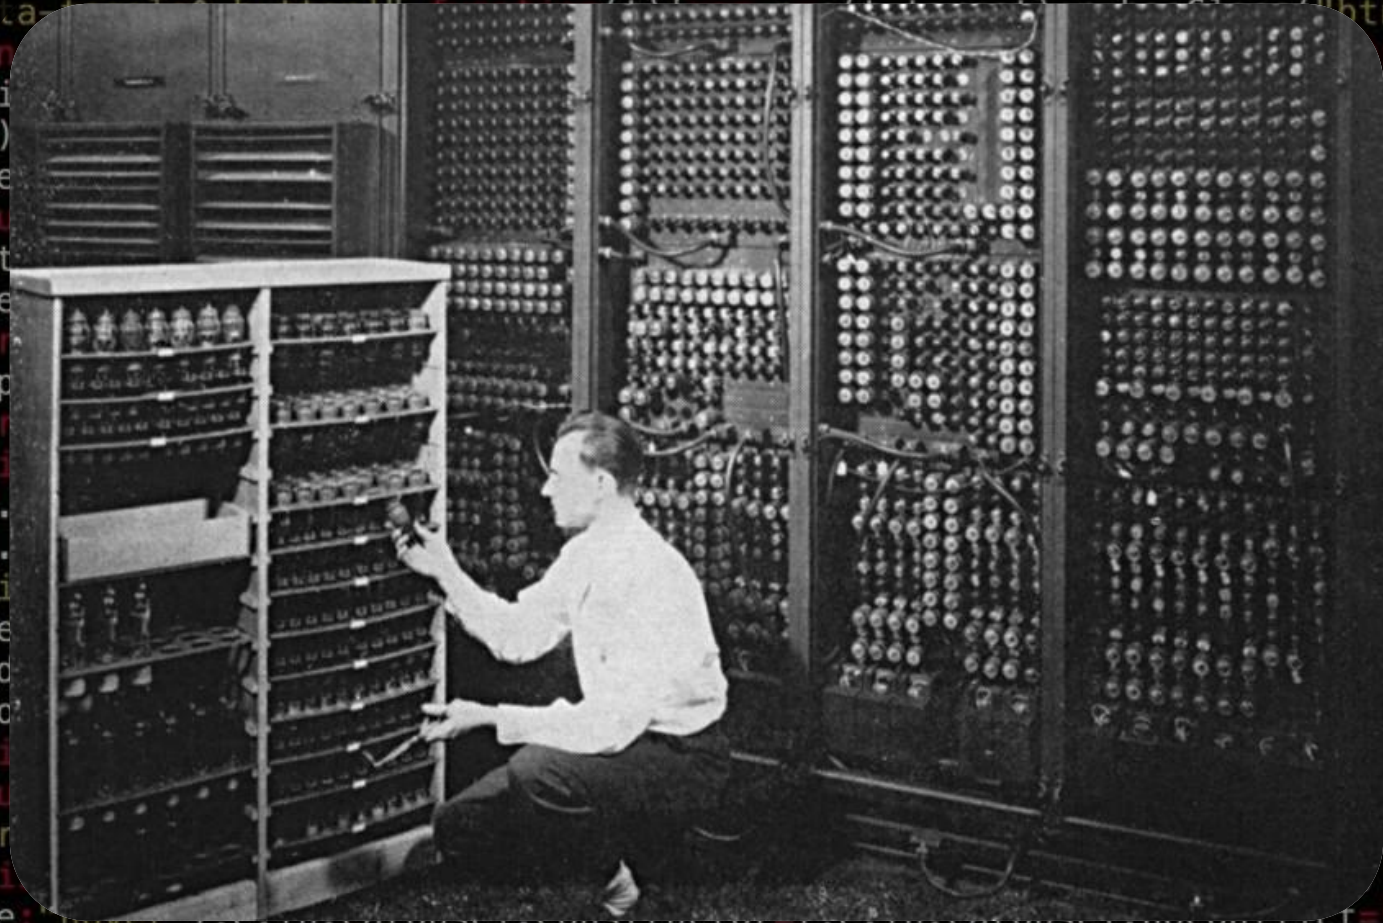

With the invention of radio, the speed of information transmission reached the speed of light, and most importantly, information became available.

Telephone sets increased the availability of communications by 5 times.

Television has made a new breakthrough in increasing the speed of information transmission and the bandwidth of the communication channel by 550 thousand times compared to the telegraph

**Computers were created
as a means of processing
and analyzing
information.**

**The introduction of
the Internet opens a
new era in the
development of
communication**

The history of communication development has overcome three communication revolutions

the invention of writing

introduction of electronic mass media

printing press manufacturing

**means of
communication of
any objects**

**transmission of
information for the
purpose of
influencing the
society**

**Meanings of
the word
communication**

**Interaction and
information
exchange**
