

# Recycling

Why recycling is so important?

A photograph of a recycling facility. In the foreground, there are large, rectangular bales of compressed plastic waste, likely PET bottles, stacked on a paved surface. The background shows a clear blue sky and a yellow building with a red roof. The text is overlaid on a white rectangular box with a dark blue border.

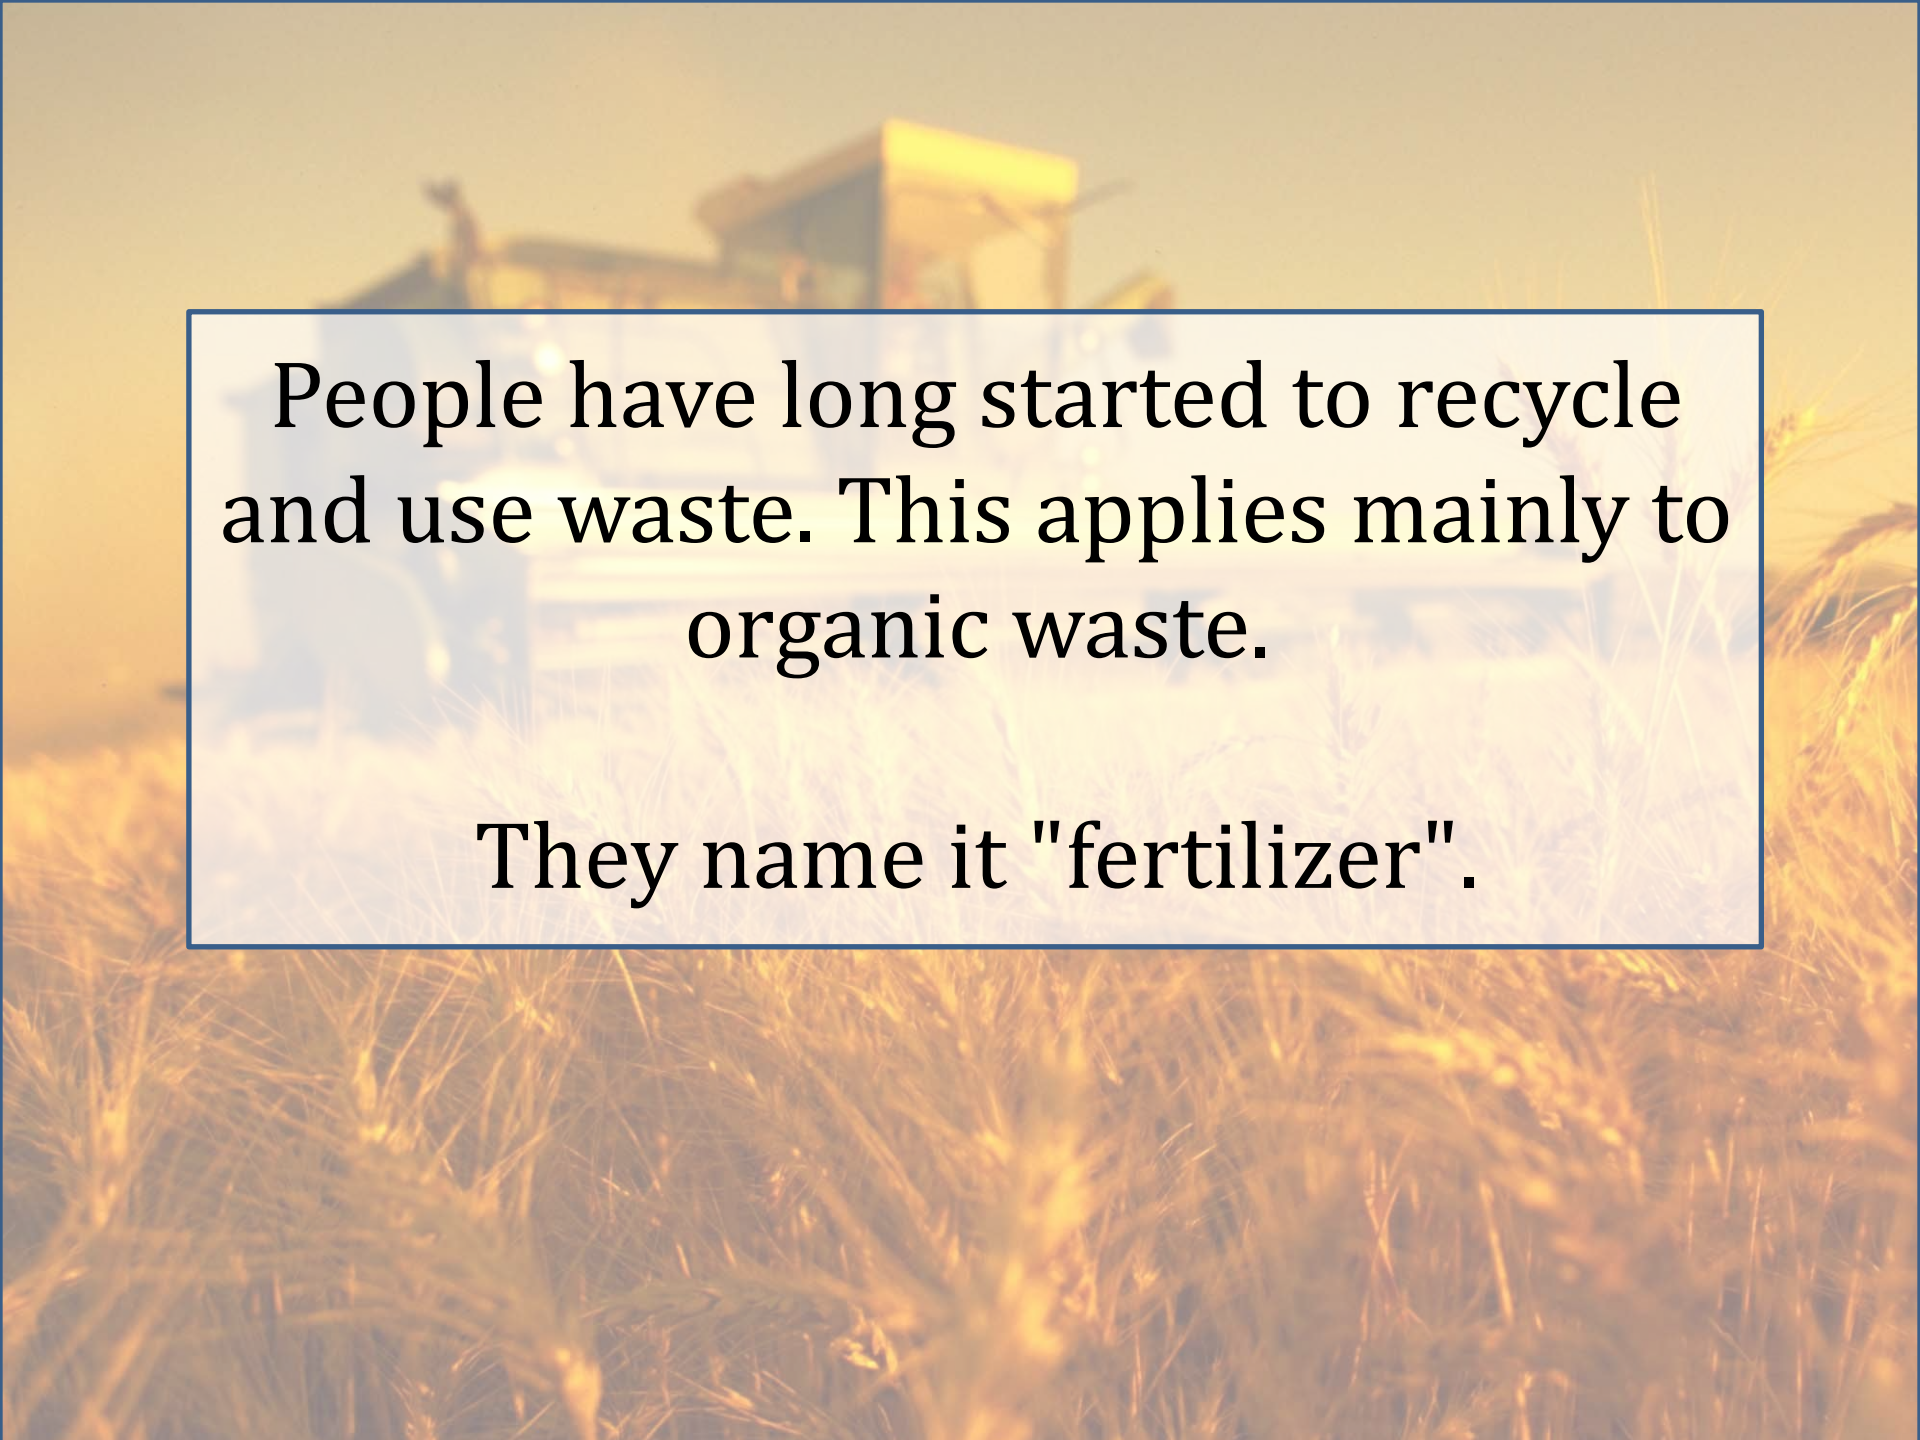

Recycling is really important action.  
It is turning used material into  
material for all a new purpose. The  
main thought when we think of  
recycling we should really think  
about the whole idea: reduce,  
recovery and reuse.

When we are converting old and waste product to new products we are saving resources. It helps to reduce pollution. There are some tips how to recycle: we should buy goods without packages, brings bottle to local recycling centre.

Of course, not all materials may be recyclable. But we can do more than we think. It is possible to recycle glass, paper, iron and other materials. For example, glass bottles can be processed and re-used for the primary purpose. Or cans sent to steel production. Paper and board recovered for reuse.

People have long started to recycle and use waste. This applies mainly to organic waste.

They name it "fertilizer".

Especially in the USSR, recycling is considered an important part of everyday life.

- In the country was built points for collection glass bottles.

- In the schools organized competitions between students and pioneers to collect scrap-metal and wastepaper.

Without recycling planet is will be heavily polluted. So if you need to throw out the trash, do not throw it on the ground. You can easily find a trash can. Come and throw it in there. It is not difficult.
