

South African Climate and Wildlife

Suid-Afrikaanse Klimaat en Wild

twinkl

Where is South Africa? Waar is Suid-Afrika?

South Africa is located at the very bottom of the African continent.

Suid-Afrika is aan die onderste punt van die Afrika kontinent geleë.

South Africa is one of the biggest countries in Africa and its shores stretch along the South Atlantic Ocean and the Indian Ocean.

Suid-Afrika is een van die grootste lande in Afrika en sy kuslyne strek vanaf die Suid Atlantiese na die Indiese Oseaan.

Where is South Africa? Waar is Suid-Afrika?

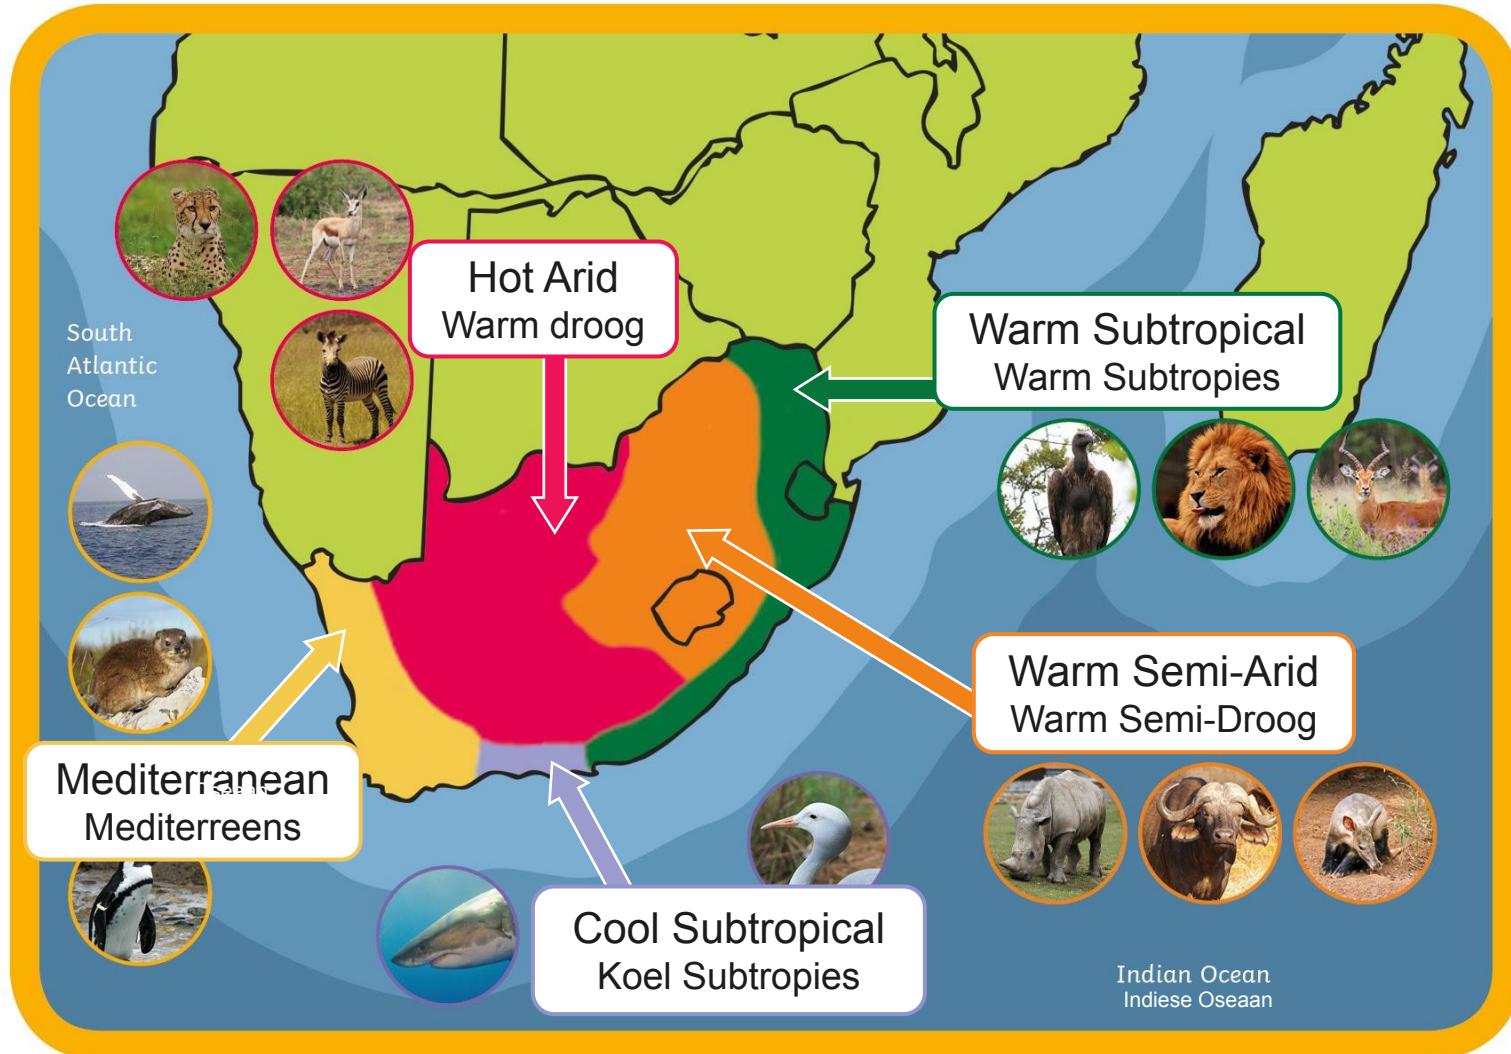

As South Africa is so big, the climate varies in different regions, which attracts various species of wildlife.

Die klimaat in Suid-Afrika verskil baie, omdat die land so groot is. Verskillende diere spesies kom voor as gevolg van die verskillende klimaat.

What types of climate are there in South Africa?

Watter tipe klimaat is daar in Suid-Afrika?

The Cheetah

Die Jagluiperd

Cheetah are the fastest land mammal on earth.

They can reach speeds of up to 120km/h.

Jagluiperde is die snelste landdier en kan tot 120km/h hardloop.

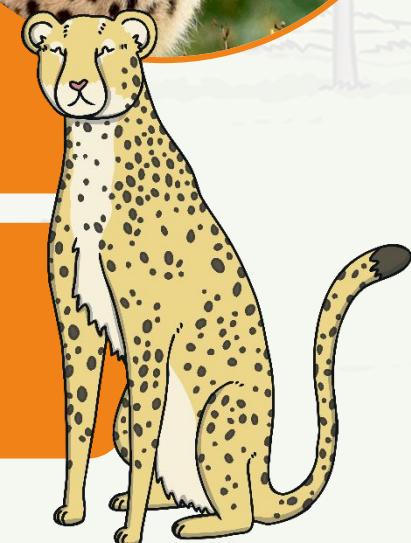

They have a light tan coat which may look like paint. These markings help their eyes to move quickly. Hulle het kenmerkende vlekke wat soos verf lyk. Hierdie vlekke help hulle om snel te beweeg.

Cheetahs are the only cat that can turn in mid-air when chasing prey.

Jagluiperde is die enigste kat wat in die lug kan omdraai, terwyl hulle hul prooi jag.

Cheetahs are the only cat from the feline species that cannot retract their claws; their footprints look like those of dogs.

Jagluiperde is die enigste kat van die katspesies wat nie hul kloue kan terug trek nie. Hul voetspore lyk soos 'n hond sin.

The Pangolin

Die ietermagog

The pangolin is the only mammal that is covered in scales. These scales are made of keratin, the same substance that our fingernails

Dit is a very strong material.
Die ietermagog se skalen is baie stevig.
The pangolin's tongue can reach up to 40cm in length! It can actually be longer than its own body!

Die ietermagog se tong kan tot 40cm lank word! Dit kan intendeel langer as hul eie liggame wees!

The pangolin is the only mammal that is covered in scales. These scales are made of keratin, the same substance that our fingernails

Die ietermagog se skalen is baie stevig.

Dag" in Februarie om bewusheid aan hul afname te bring.
nommers te bring.

They sleep during the day and hunt at night and their diet consists of ants and termites.

Hulle slaap gedurende die dag en jag snags en hul dieet bestaan uit miere en termiete.

The White Rhino

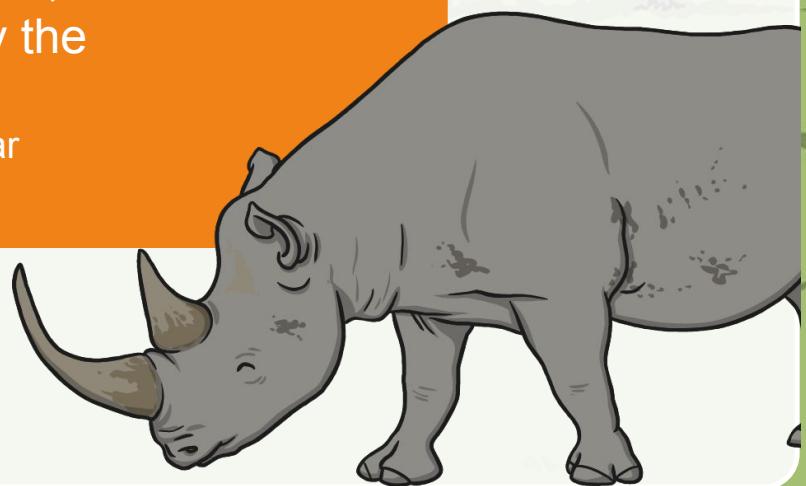

Die Witrenoster

The white rhino is the largest of all the rhino species. Males can reach a weight of about 2300 kg!

Die witrenoster is die grootste van al die renoster spesies.
Die bulle kan tot 2300kg weeg!

There are 5 types of rhinos in the world,
but in South Africa you can find only the
black or the white species.

Daar is 5 ander tipe renosters in die wêrld, maar
Suid-Afrika het slegs die wit- en swartrenoster.

The White Rhino

Die Witrenoster

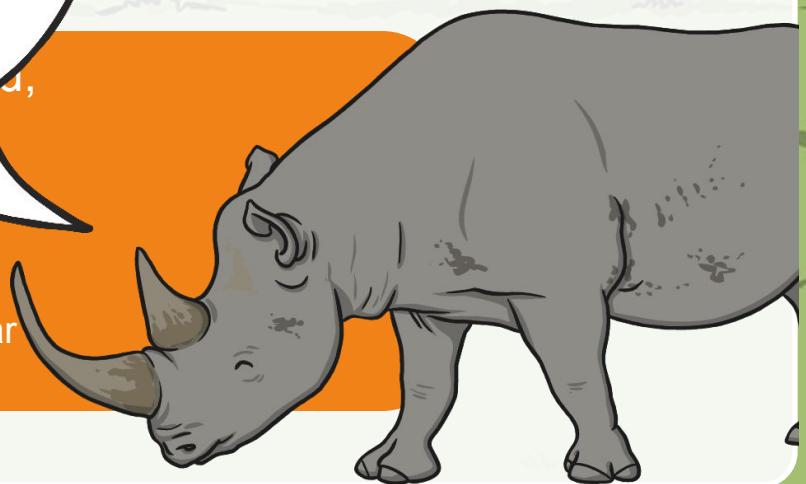

The white rhino was originally called the “wide mouthed” rhino due to the shape of its mouth which it uses to eat grass. People got “wide” mouths from eating too much and started calling it a “white rhino”.

Die witrenoster word ook bekend as die bos brandweermanne en sal ‘n klein vuurtjie “blus” deur daarop te trap.

When a white rhino was first seen, it was just a small grey rhino. It was difficult to distinguish it from the “white” one.

Toe ‘n ander spesie ontdek word (‘n blaar-of planteter), het mense hom sommer net die “swartrenoster” genoem om die twee van mekaar te onderskei.

Rhinos are known as the bush firefighters and as they will extinguish a small fire by stamping on it.

The African Zebra

Die Afrika Sebra

Zebras belong to the horse family.
They are not striped horses.
Sebras is deel van die paardfamilie.
Hulle is nie gestreepte paarde nie.

Zebras' stripes are different from those of two zebras.
Sebra strepe is verskillend van dié van twee sebras.
Sebras is deel van die paardfamilie.
Hulle is nie gestreepte paarde nie.

Predators, like lions, can only see black and white so when they chase a zebra, the herd will stay close together. The black and white stripes combined together will confuse lions and they will struggle to target an individual zebra.
Roofdiere soos leeus, kan slegs in swart en wit sien, daarom sal die roofdier nie 'n individueel uitsonder nie.

You normally find zebras and wildebeests grazing together. The zebra will eat the long grass and the wildebeest will come afterwards to eat the short grass.
Sebras en wildebeeste wei gewoonlik saam.
Sebras is agter die lang gras aan, terwyl die wildebeeste die korter gras wil eet.

The Humpback Whale

Die Bultrugwalvis

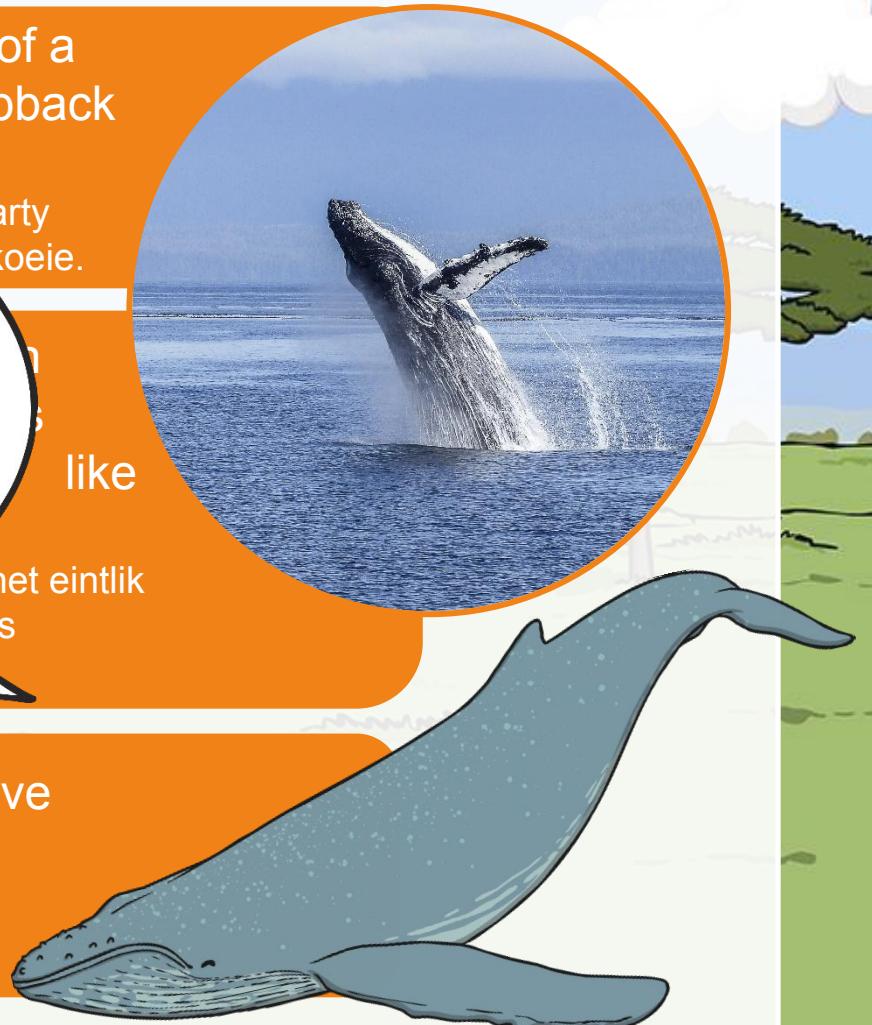

A humpback whale is about the length of a bus. Some are even longer! Male humpback whales are smaller than females.

'n Bultrugwalvis is soeker as 'n bus. Sommige is zelfs langer! Mense wat op die walvis se staart kyk, sien daarvan net soos menslike vingerafdrukke.

Human fingerprints are unique to each individual.
Die vingerafdrukke van 'n mens is uniek aan elkeen.

Nes 'n mens se vingerafdruk, is die bultrugwalvis se stertvin eie aan elke individueel.
Die stertvin van 'n bultrugwalvis is net soos die vingerafdrukke van 'n mens.

They only eat during the summer and live off fat reserves during winter months.
Hulle eet slegs gedurende die somer en lewe dan van vetreserves gedurende die wintermaande.

The Blue Crane

Die Bloukraanvoël

The blue crane is a national bird.

Die bloukraanvoël is 'n nasionale

They live in South Africa. They
lives in Suid-Afrika. They
very protective. Hulle het net
beide is goeie ouers.

Female blue cranes choose
mates after the males put up a
display of throwing objects up
into the air.

Die wyfies kies hul pasmaats nadat
die mannetjies 'n groot vertoning
opgesit het. Hulle doen dit deur
items in die lug op te gooien.

Although blue cranes are good flyers, they
moult during the last parts of summer.

During this time they cannot fly.

Alhoewel bloukraanvoëls baie goed kan vlieg, verveer
hulle gedurende die laaste deel van die somer. Tydens
hierdie tyd kan hulle nie vlieg nie.

The African Penguin

Die Afrika Pikkewyn

The African penguins are only found on the south-western coast of Africa.

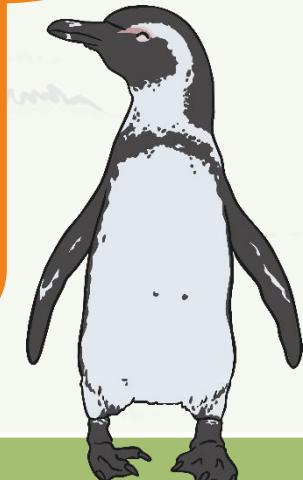

Die Afrika pikkewyn kom slegs aan die suid-westerlike kus van Afrika voor.

Their black and white coat camouflages them underwater!

Hul swart en wit pels kamoeleer hulle terwyl hulle onderwater swem!

African penguins can hold their breath underwater for up to two and a half minutes and can swim to depths of about 30 metres!

Afrika pikkewyne kan hul asems tot sowat twee en 'n half minute onderwater ophou en dan dieptes van omstreng 30 meter swem!

The African Penguin

Die Afrika Pikkewyn

African penguins mate for life which means that they will stay with the same partner for all their lives. They will return to the same breeding site every year.

Afrika pikkewyne paar lewenslank wat beteken dat hulle saam met dieselfde persoon gaan broei. Hulle sal elke jaar na die selfde plek terugkeer.

The African penguins sound like braying donkeys when they communicate with each other.

Die Afrika pikkewyn klink soos donkies wanneer hulle met mekaar kommunikeer.
