Создан файл базы данных

The screenshot displays the SQL Server Enterprise Designer interface for editing a table named 'Table' in the 'dbo' schema. The top menu bar includes an 'Update' button, which is highlighted by a red arrow. Below the menu is a table grid with columns for 'Name', 'Data Type', 'Allow Nulls', and 'Default'. The 'Name' column contains 'Id', and the 'Data Type' is 'int'. The 'Allow Nulls' column has checkboxes, with the one for 'Id' being unchecked. The 'Default' column is empty.

The main workspace is divided into two panes: 'Designer' and 'SQL'. The 'Designer' pane shows a visual representation of the table structure, with a yellow box labeled 'Данные о таблице' (Table data) overlaid on it. The 'SQL' pane shows the SQL script for creating the table:

```

1 CREATE TABLE [dbo].[Table]
2 (
3     [Id] INT NOT NULL PRIMARY KEY
4 )
5

```

The 'Properties' window on the right shows the properties of the selected table, including 'Data Compression Option', 'Identity Column', 'Is Replicated', 'Lock Escalation', 'Regular Data Space Specif Filegroup', 'Schema', and 'Text Filegroup'. The 'Solution Explorer' on the far right shows the project structure for 'WindowsFormsApp11', including 'Properties', 'References', 'App.config', 'Form1.cs', 'MedDatabase.mdf', and 'Program.cs'.

Annotations include a yellow box labeled 'Свойства столбца, таблицы' (Column properties, table) pointing to the 'Properties' window, and two arrows: an orange arrow labeled 'Двусторонняя связь' (Bidirectional link) pointing from the 'Designer' to the 'SQL' pane, and a green arrow labeled 'Двусторонняя связь с выбранным объектом' (Bidirectional link with selected object) pointing from the 'Designer' to the 'Properties' window.

Редактор таблиц

dbo.Person [Design]* Form1.cs [Design]

Update Script File: dbo.Table.sql*

Name	Data Type	Allow Nulls	Default
Id	int	<input type="checkbox"/>	
FirstName	nchar(32)	<input checked="" type="checkbox"/>	
SecondName	nchar(32)	<input checked="" type="checkbox"/>	
LastName	nchar(64)	<input checked="" type="checkbox"/>	
BirthDate	date	<input checked="" type="checkbox"/>	
		<input type="checkbox"/>	

Состав столбцов таблицы

Id	Первичный ключ (создан автоматически)
Имя, отчество и фамилия	nchar – строка указанной длины
Дата рождения	Специальный тип date

Задайте следующие поля

The screenshot displays the SQL Server Enterprise Designer interface. The main window shows the design view of a table named 'dbo.Person'. The columns are:

Name	Data Type	Allow Nulls	Default
Id	int	<input type="checkbox"/>	
FirstName	nchar(32)	<input checked="" type="checkbox"/>	
SecondName	nchar(32)	<input checked="" type="checkbox"/>	

The SQL script in the lower pane is as follows:

```
1 CREATE TABLE [dbo].[Person]
2 (
3     [Id] INT NOT NULL PRIMARY KEY IDENTITY,
4     [FirstName] NCHAR(32) NULL,
5     [SecondName] NCHAR(32) NULL,
6     [LastName] NCHAR(64) NULL,
7     [BirthDate] DATE NULL
8 )
9
10 GO
11 EXEC sp_addextendedproperty @name = N'MS_Description',
12     @value = N'Имя',
13     @level0type = N'SHEMA',
14     @level0name = N'dbo',
15     @level1type = N'TABLE',
16     @level1name = N'Person',
17     @level2type = N'COLUMN',
18     @level2name = N'FirstName'
```

The Properties window on the right shows the 'Id' column properties:

(Name)	Id
Allow Nulls	False
Collation	
Computed Column Specification	
Data Type	int
Default Value or Binding	
Description	
Full Text Specification	False
Identity Specification	True
(Is Identity)	True
Identity Increment	1
Identity Seed	1
Is Column Set	False
Is FileStream	False

A red arrow points from the 'Id' column in the design view to the 'Identity Specification' property in the Properties window. A blue box highlights the 'Identity Specification' and '(Is Identity)' properties in the Properties window.

Identity Increment	1
Identity Seed	1

Таблица посещений врача

The screenshot displays the SQL Server Enterprise Designer interface for a table named `Appointment`. The design view shows two columns: `Id` (int, primary key, identity) and `PersonID` (int, nullable). The T-SQL view shows the following code:

```
1 CREATE TABLE [dbo].[Appointment]
2 (
3     [Id] INT NOT NULL PRIMARY KEY IDENTITY,
4     [PersonID] INT NULL
5 )
6
7 GO
8 EXEC sp_addextendedproperty @name = N'MS_Description',
9     @value = N''Пациент'',
10    @level0type = N'SCHEMA',
11    @level0name = N'dbo',
12    @level1type = N'TABLE',
```

The Properties window shows the details for the `PersonID` column:

Property	Value
(Name)	PersonID
Allow Nulls	True
Collation	
Computed Column Specification	
Data Type	int
Default Value or Binding	
Description	'Пациент'
Full Text Specification	False
Identity Specification	False
Is Column Set	False
Is File Stream	False

The screenshot shows the Microsoft SQL Server Enterprise interface. On the left, the 'Server Explorer' pane displays a tree view of a database named 'MedDatabase.mdf'. Under the 'Tables' folder, two tables are visible: 'Appointment' and 'Person'. The 'Appointment' table is selected, and a context menu is open over it. The menu options are: 'Add New Table', 'New Query' (highlighted), 'Refresh', and 'Properties' (with 'Alt+Enter' as a keyboard shortcut). The main window shows the 'dbo.Table_1.sql' script file, which contains the following T-SQL code:

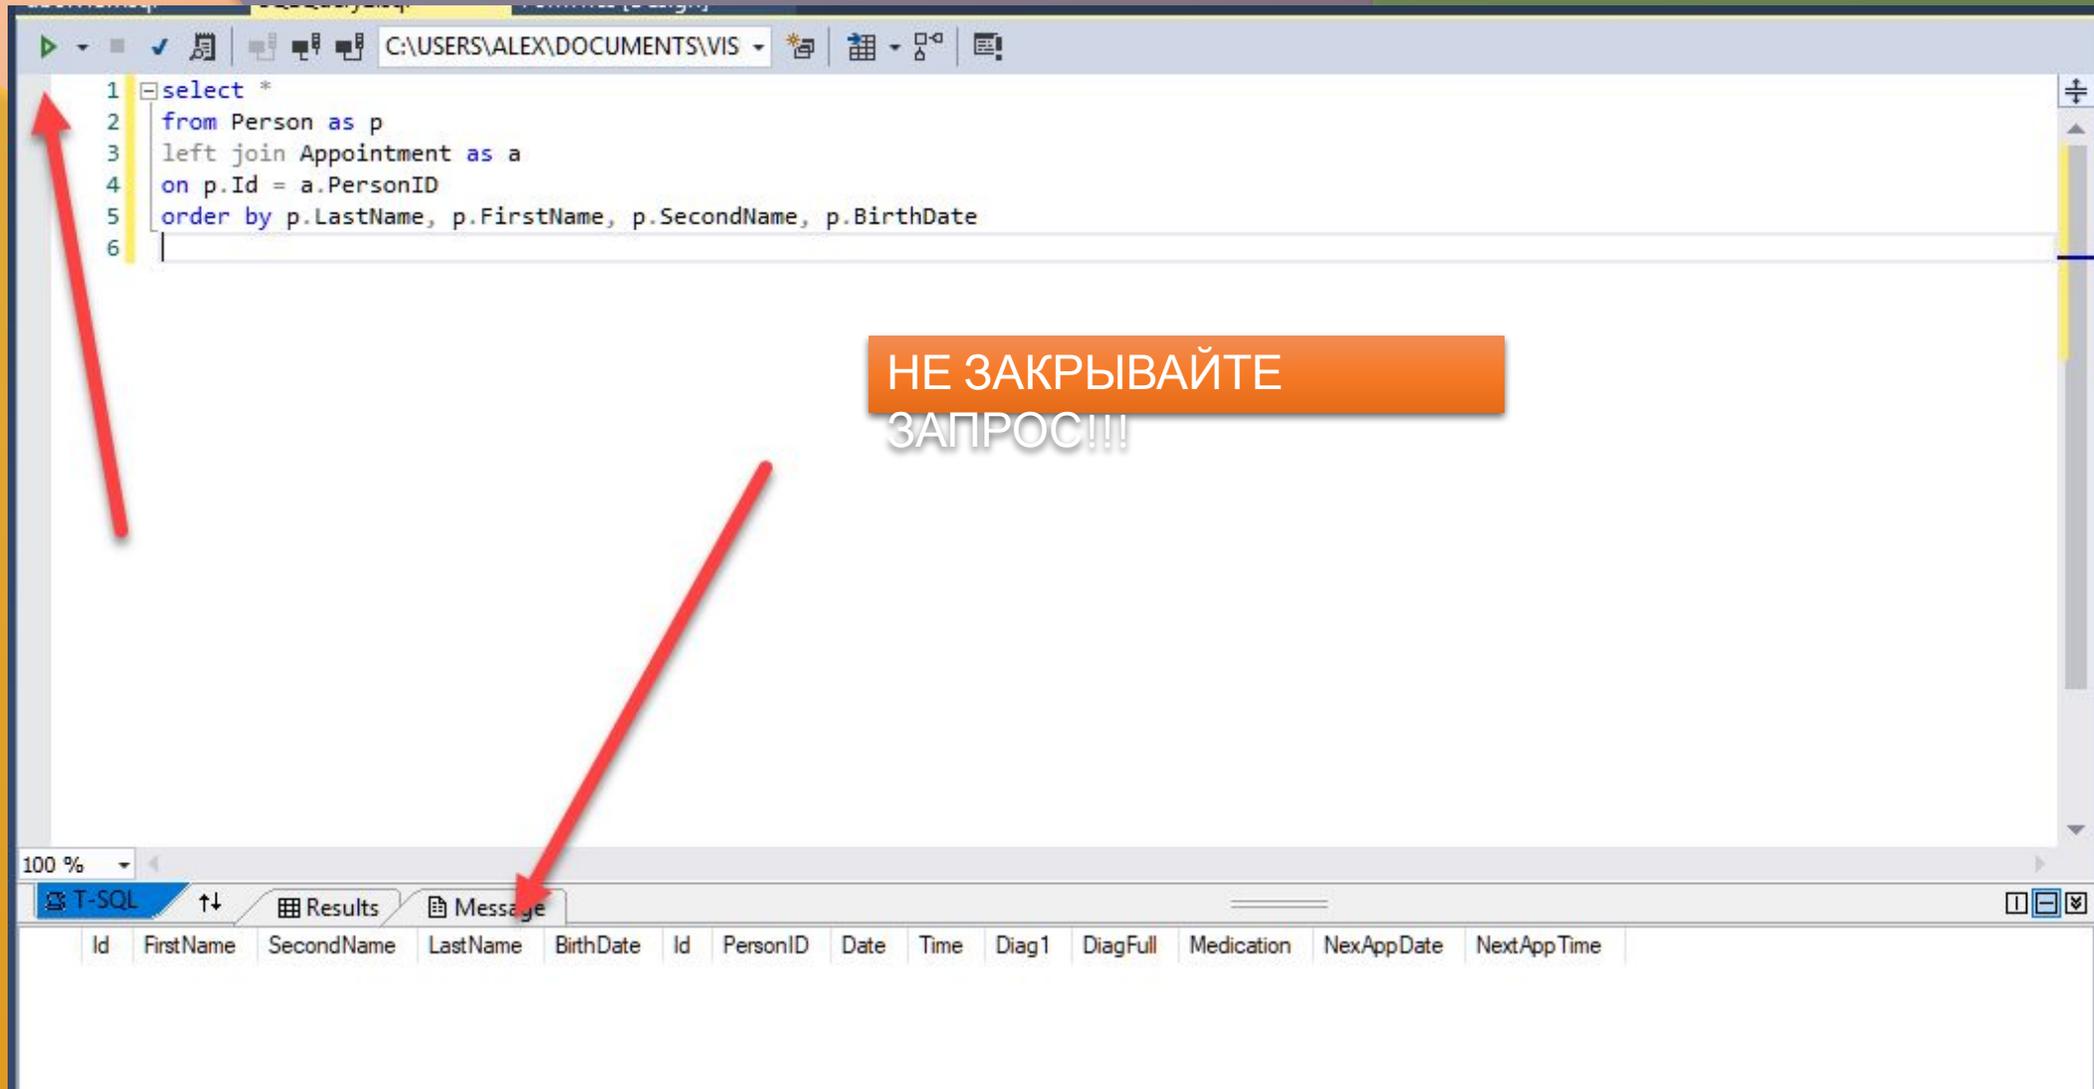

```
1 CREATE TABLE [dbo].[Appo
2 (
3     [Id] INT NOT NULL PR
4     [PersonID] INT NULL,
5     [Date] DATE NULL,
6     [Time] TIME NULL,
7     [Diag1] NCHAR(64) NU
8     [DiagFull] TEXT NULL
9     [Medication] NCHAR(1
10    [NexAppDate] DATE NU
11    [NextAppTime] TIME
```

The screenshot shows a window with two tabs: 'SQLQuery2.sql*' and 'Form1.cs [Design]'. The active tab is 'SQLQuery2.sql*', which contains a SQL query. The query is as follows:

```
1 select *
2 from Person as p
3 left join Appointment as a
4 on p.Id = a.PersonID
5 order by p.LastName, p.FirstName, p.SecondName, p.BirthDate
6
```

Создайте запрос на объединение

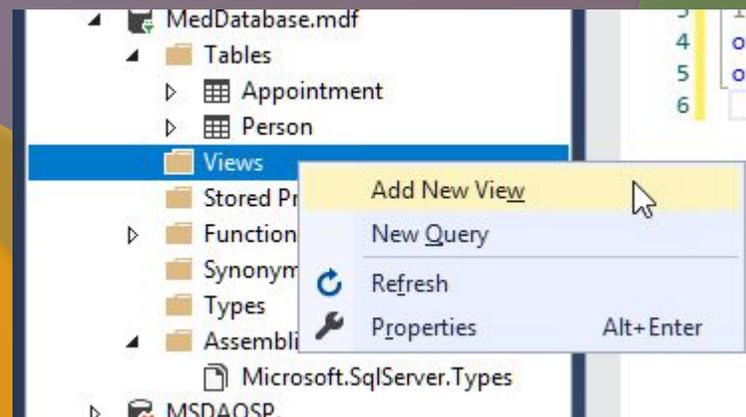

The screenshot shows a SQL Server Enterprise Manager window with a T-SQL query editor. The query is as follows:

```
1 select *  
2 from Person as p  
3 left join Appointment as a  
4 on p.Id = a.PersonID  
5 order by p.LastName, p.FirstName, p.SecondName, p.BirthDate  
6
```

An orange warning box in the center of the window contains the text: НЕ ЗАКРЫВАЙТЕ ЗАПРОС!!! (Do not close the query!!!). Two red arrows point to the 'Execute' button (a green play icon) on the left side of the query editor and the 'Message' tab in the bottom status bar.

The bottom status bar shows the 'Message' tab selected, with a table of columns: Id, FirstName, SecondName, LastName, BirthDate, Id, PersonID, Date, Time, Diag1, DiagFull, Medication, NexAppDate, NextAppTime.

Убедитесь, что запрос дает ответ (хотя бы и пустой)

Создайте вид (имитацию таблицы на базе запроса)

1	1	01.10.2018	13:10:12	Грипп	...	3 см3 пеницил...	10.01.2019	13:00:00
2	1	10.01.2018	14:00:00	...	NULL	NULL	NULL	NULL
NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL

Three red arrows point to the PersonID, Time, and NexAppDate columns in the first row of data.

Обязательно задайте правильный PersonID

The screenshot displays a SQL query window with the following code:

```
1 select *  
2 from Person as p  
3 left join Appointment as a  
4 on p.Id = a.PersonID  
5 order by p.LastName, p.FirstName, p.SecondName, p.BirthDate  
6
```

Below the query, the results are shown in a table with the following columns: Id, FirstName, SecondName, LastName, BirthDate, Id, PersonID, Date, Time, Diag1, DiagFull, Medication, and NexAppDate. A red arrow points to the 'DiagFull' column in the first row of the results table.

	Id	FirstName	SecondName	LastName	BirthDate	Id	PersonID	Date	Time	Diag1	DiagFull	Medication	NexAppDate
1	1	Алексеев	Иван	Павлович	1986-02-01	1	1	2018-10-01	13:10:12.0000000	Грипп	????????????	3 см3 пенициллин внутривенно	2019-01-10
2	1	Алексеев	Иван	Павлович	1986-02-01	2	1	2018-01-10	14:00:00.0000000	Здоров	NULL	NULL	NULL
3	2	Никаноров	Павел	Петрович	1995-03-02	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL

Убедитесь, что запрос отрабатывается

The screenshot shows the SQL Server Enterprise Manager interface. At the top, there are tabs for 'dbo.View [Data]', 'SQLQuery2.sql *', and 'Form1.cs [Design]'. Below the tabs is a toolbar with a refresh icon, a filter icon, and a 'Max Rows: 1000' dropdown. The main area displays a table with the following data:

	LastName	FirstName	SecondName	BirthDate	Date	Diag1	DiagFull	Medication	NexAppDate	NextAppTime		
▶	Алексеев	...	Иван	...	01.02.1986	01.10.2018	Грипп	...	???????????? ???? ?	3 см3 пеницил...	10.01.2019	13:00:00
	Павлович	...	Алексеев	...	01.02.1986	10.01.2018	Здоров	...	NULL	NULL	NULL	NULL
	Петрович	...	Никаноров	...	02.03.1995	NULL	NULL	NULL	NULL	NULL	NULL	NULL
*	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL

Below the table is a tree view showing the 'Views' folder expanded to 'View'. A context menu is open over the 'View' folder, with the following options:

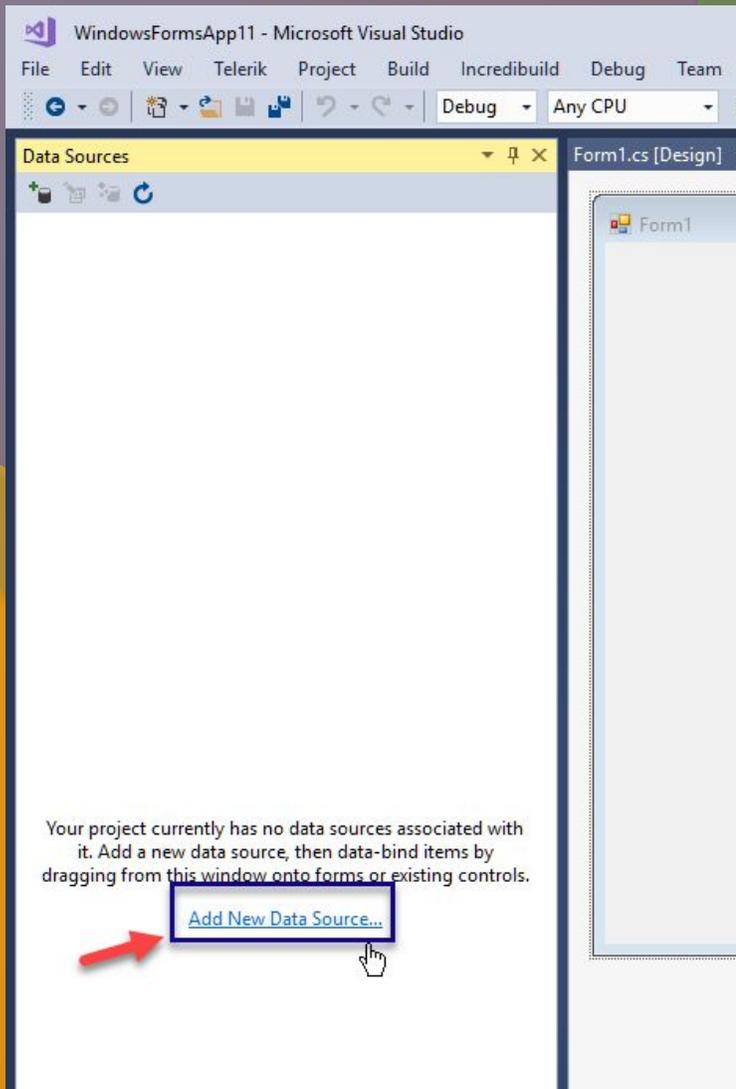

- Add New View
- Add New Trigger
- New Query
- Open View Definition
- Show Results (highlighted)
- Copy (Ctrl+C)
- Delete (Del)
- Refresh
- Properties (Alt+Enter)

Подключение к базе данных

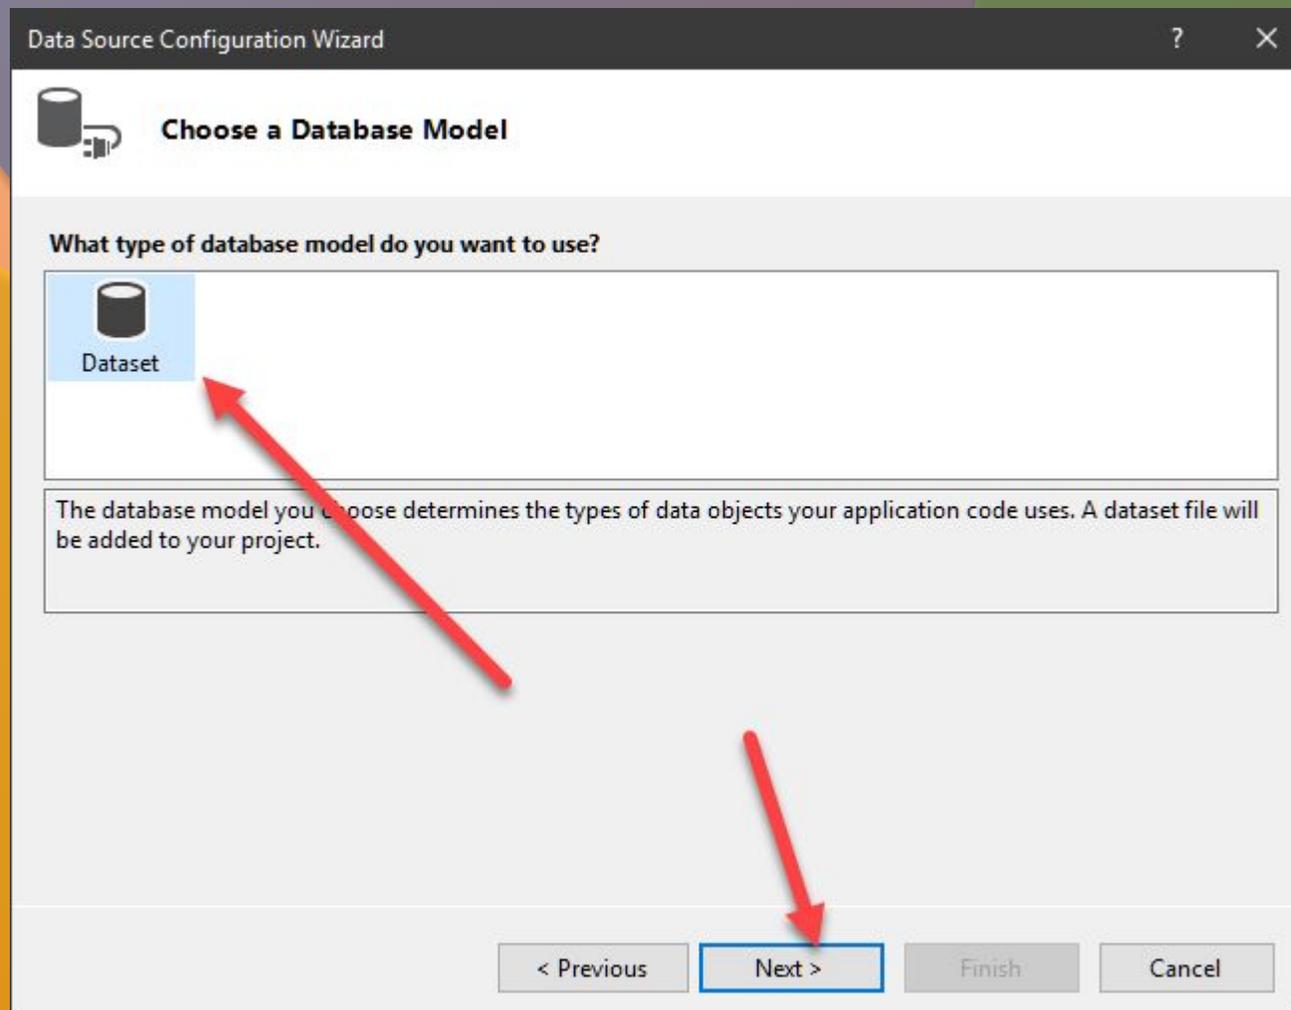

Отображаем окно мастера

Запускаем мастер подключения

Выбираем базу данных

На ее основе будет создана модель данных (Dataset)

Data Source Configuration Wizard

 **Choose Your Data Connection**

Which data connection should your application use to connect to the database?

MedDatabase.mdf

This connection string appears to contain sensitive data (for example, a password), which is required to connect to the database. However, storing sensitive data in the connection string can be a security risk. Do you want to include this sensitive data in the connection string?

No, exclude sensitive data from the connection string. I will set this information in my application code.

Yes, include sensitive data in the connection string.

Show the connection string that you will save in the application

```
Data Source=(LocalDB)\MSSQLLocalDB;AttachDbFilename=|DataDirectory|\MedDatabase.mdf;Integrated Security=True
```

В приложении будет строка для указания БД

Data Source Configuration Wizard

 **Save the Connection String to the Application Configuration File**

Storing connection strings in your application configuration file eases maintenance and deployment. To save the connection string in the application configuration file, enter a name in the box and then click Next.

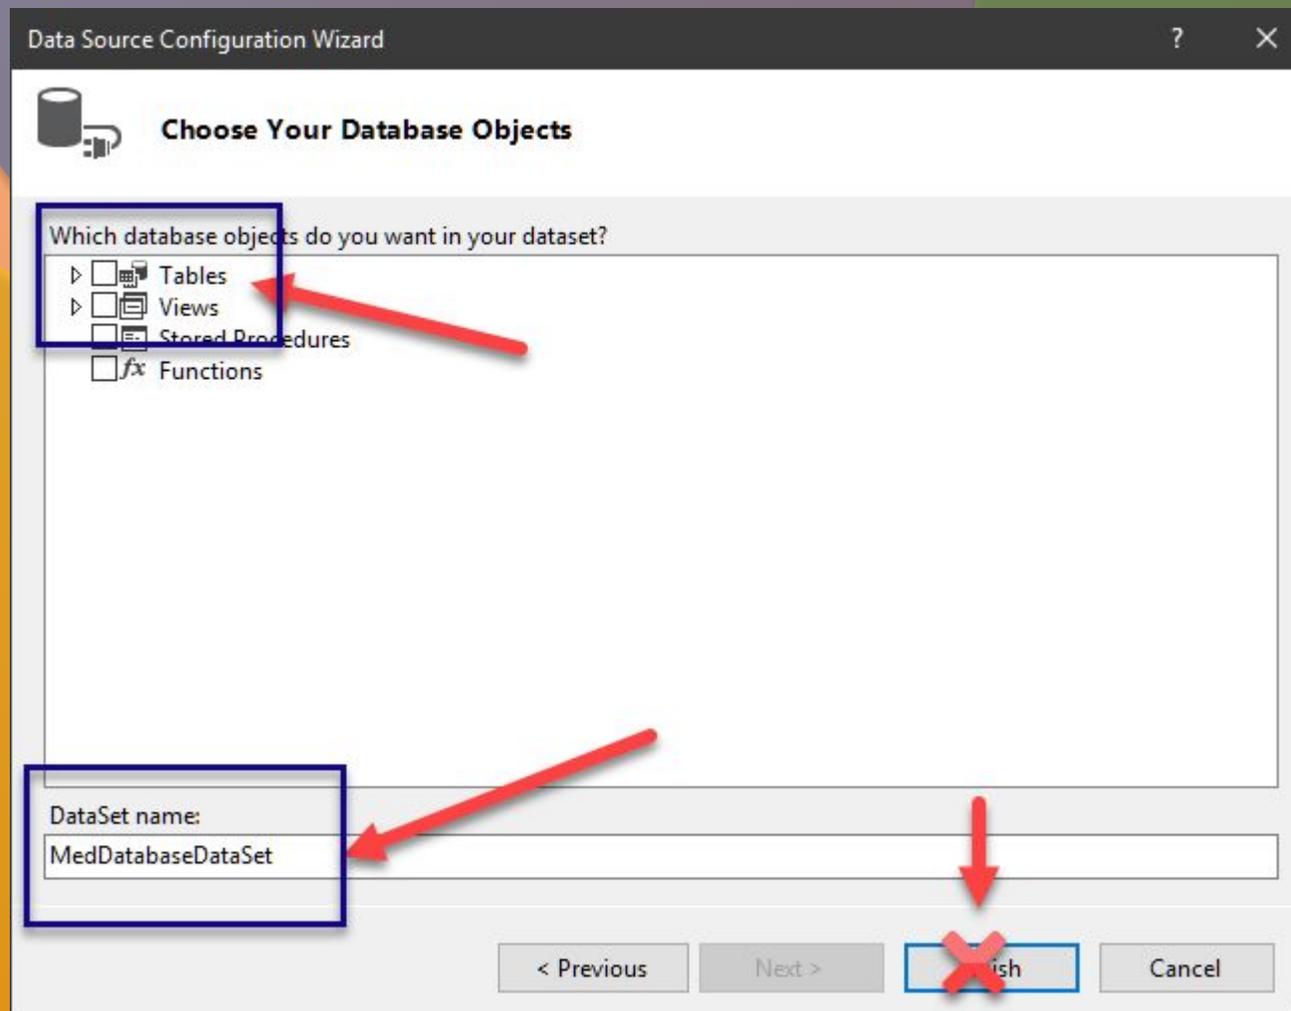

Do you want to save the connection string to the application configuration file?

Yes, save the connection as:

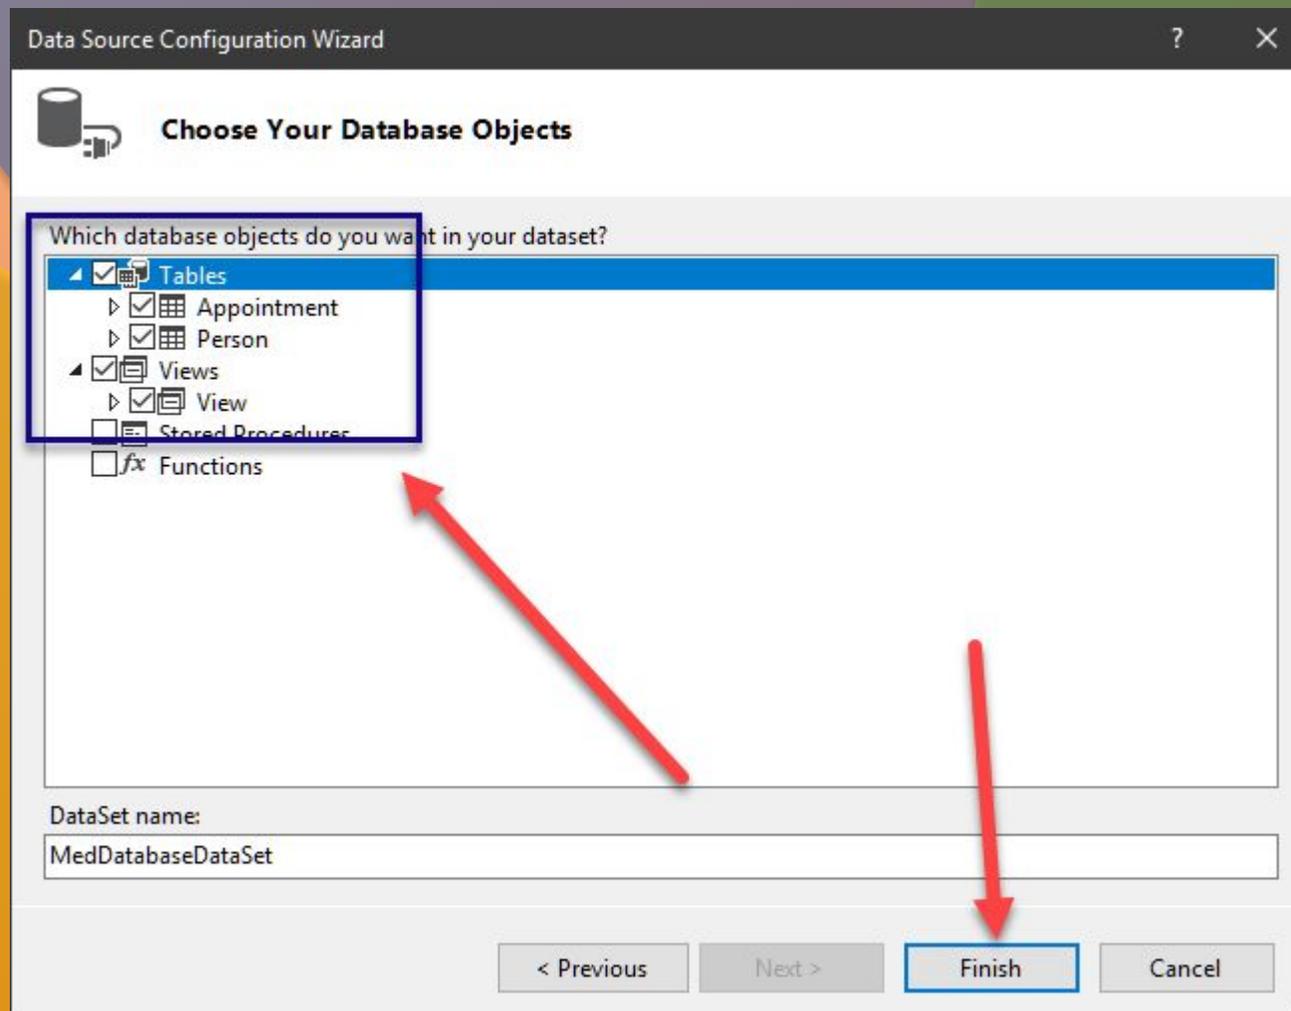

< Previous **Next >** Finish Cancel

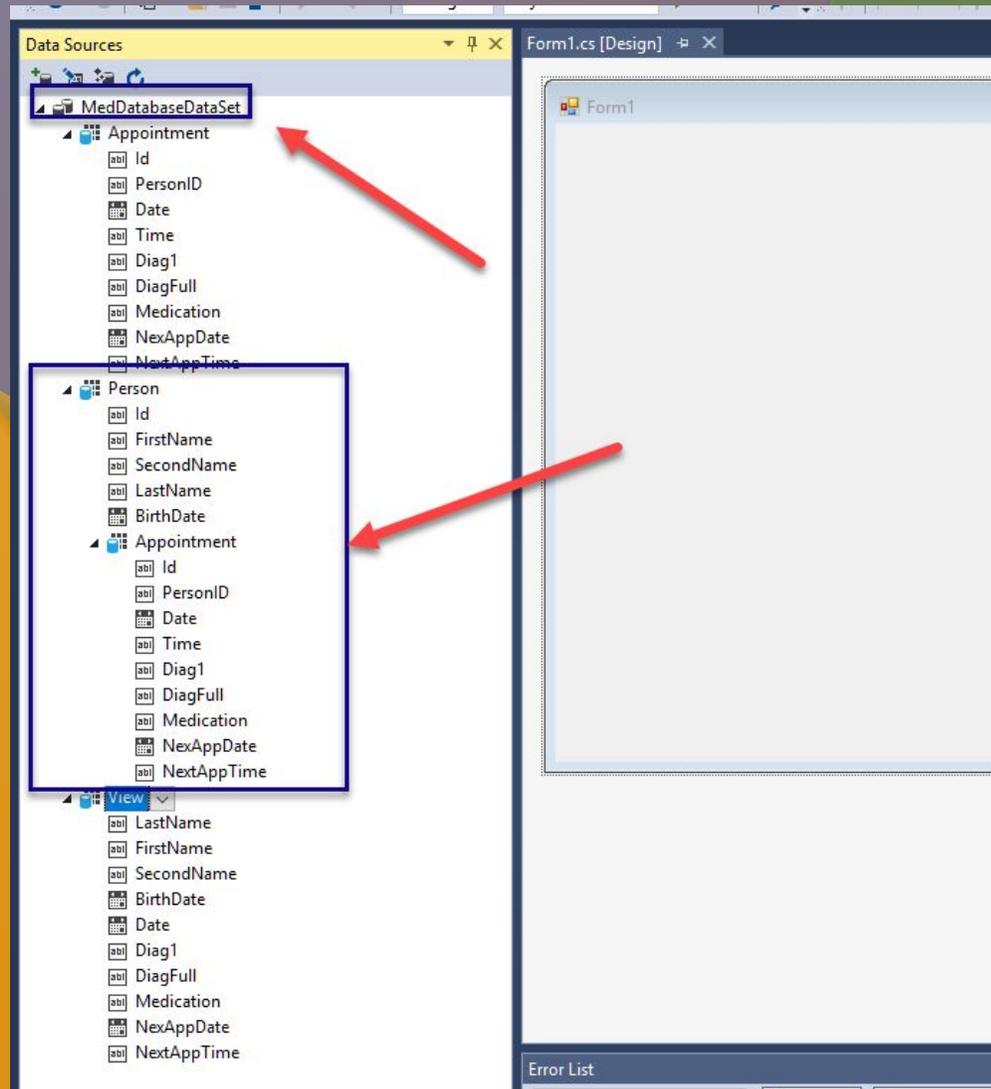

Строка будет сохранена в файле конфигурации

Редактируем датасет

The image displays a Visual Studio interface with a database schema on the left and a file explorer on the right. The schema consists of three tables: Appointment, Person, and View. Each table has a corresponding TableAdapter class. The AppointmentTableAdapter and ViewTableAdapter are marked with a checkmark and the text 'SQL Fill, GetData ()'. The PersonTableAdapter is also marked with a checkmark and the text 'SQL Fill, GetData ()'. A red arrow points from the MedDatabaseDataSet.xsd file in the file explorer to the schema area.

Appointment

The screenshot displays the Visual Studio IDE with the following components:

- Server Explorer:** Shows a database schema with a table named **Person**. The **Id** column is highlighted with a blue box and a red arrow pointing to the Properties window.
- View:** Shows the columns of the **Person** table: **Id**, **FirstName**, **SecondName**, **LastName**, and **BirthDate**.
- Properties Window:** Shows the properties for the **Id** DataColumn. A blue box highlights the **AutoIncrement** section, with red arrows pointing to the **AutoIncrement**, **AutoIncrementSeed**, and **AutoIncrementStep** properties.
- Solution Explorer:** Shows the project structure for **WindowsFormsApp11**, including **Form1.cs**, **Form1.Designer.cs**, **MedDatabase.mdf**, **MedDatabase_log.ldf**, **MedDatabaseDataSet.xsd**, **MedDatabaseDataSet.Designer.cs**, **MedDatabaseDataSet.xsc**, **MedDatabaseDataSet.xss**, and **Program.cs**.
- Properties Window (Detailed View):**

Property	Value
AllowDBNull	False
AutoIncrement	True
AutoIncrementSeed	-1
AutoIncrementStep	-1
Caption	Id
Data type	System.Int32
DateTimeMode	UnspecifiedLocal
DefaultValue	<DBNull>
Expression	
MaxLength	-1
Name	Id
NullValue	(Throw exception)
ReadOnly	True
Source	Id
Unique	True

Первичный ключ настроен для генерации на стороне сервера

The screenshot displays the Visual Studio interface with three data model views: Appointment, Person, and View. The Person view has 'SecondName' highlighted. A red arrow points from this field to the Properties window, which shows the 'Caption' property set to 'Отчество'.

Appointment Table:

- Id (Primary Key)
- PersonID
- Date
- Time
- Diag1
- DiagFull
- Medication
- NexAppDate
- NextAppTime

Person Table:

- Id (Primary Key)
- FirstName
- SecondName
- LastName
- BirthDate

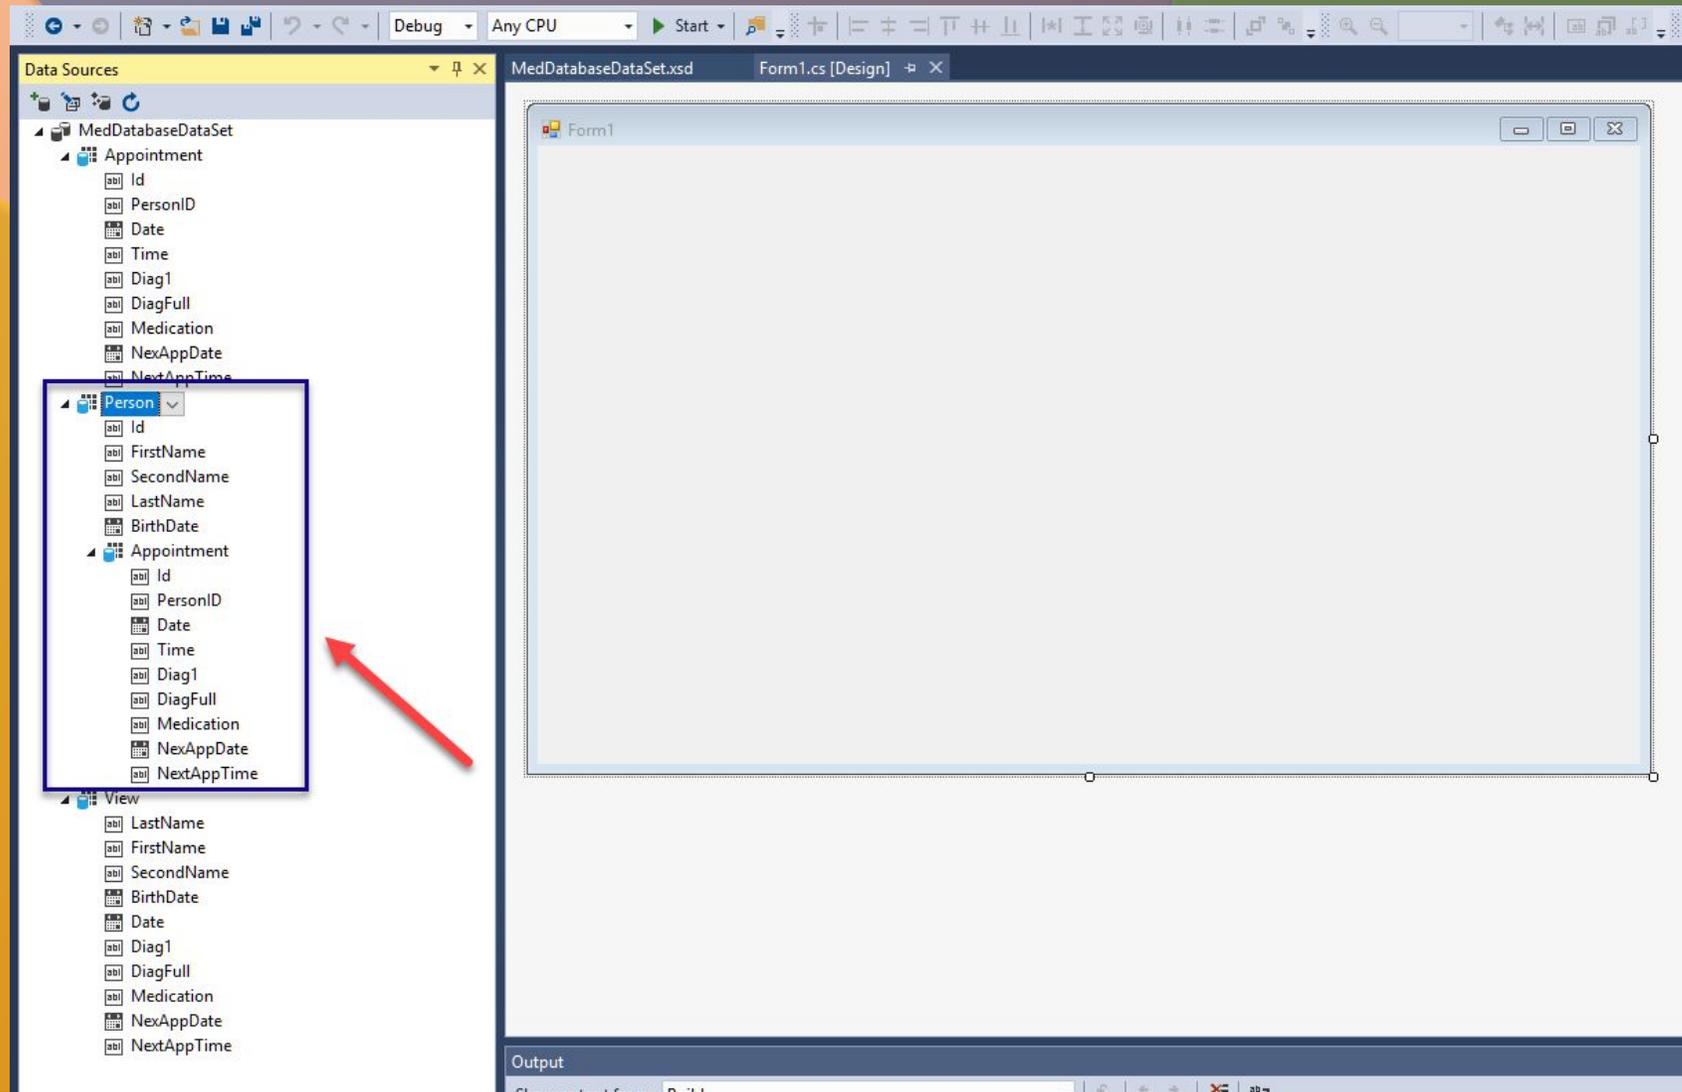

View Table:

- LastName
- FirstName
- SecondName
- BirthDate
- Date
- Diag1
- DiagFull
- Medication
- NexAppDate
- NextAppTime

Properties Window (SecondName DataColumn):

AllowDBNull	True
AutoIncrement	False
AutoIncrementSeed	0
AutoIncrementStep	1
Caption	Отчество
DataType	System.String
DateTimeMode	UnspecifiedLocal
DefaultValue	<DBNull>

MaxLength	32
Name	SecondName

Добавьте заголовки полей

Переместите на форму таблицу данных
Person

The screenshot displays the Visual Studio IDE with two main windows. On the left is the 'Data Sources' window, which shows a tree view of data sources. The 'MedDatabaseDataSet' is expanded to show two tables: 'Appointment' and 'Person'. The 'Person' table is highlighted with a blue box, and a red arrow points from it to the 'Person' table in the design view on the right. The design view shows a 'Form1' window with a data table. The table has five columns: 'Id', 'FirstName', 'SecondName', 'LastName', and 'BirthDate'. A red arrow points to the table, and another red arrow points to the 'BirthDate' column. The table is currently empty, with a single row containing a star icon in the first column.

Id	FirstName	SecondName	LastName	BirthDate
*				

Добавлены таблица и навигатор данных

датасет,
связанный с датасетом и формой
источник данных,
адаптер таблицы,
менеджер (если таблиц несколько) и
навигатор по записям

Form1

	Id	FirstName	SecondName	LastName	BirthDate
*					

of {0}

medDatabaseDataSet personBindingSource personTableAdapter tableAdapterManager personBindingNavigator

**Добавлены
компоненты:**

Датасет читает данные из БД

«Раскладывает» данные по классам

Передает массивы в источник данных

Источник раздает данные по визуальным
элементам, в частности – таблицам

За состоянием данных в таблицах следит адаптер
таблицы и менеджер таблиц (например, он
реагирует на изменения данных)

Одна из записей в таблице является
«выбранной», на нее указывает курсор

За курсором следит навигатор

The screenshot shows a Visual Studio design view for a form named 'Form1'. The form contains a table with the following data:

Id	FirstName	Second name	LastName	BirthDate
1	Алексеев	Иван	Павлович	01.02.1986
2	Никаноров	Павел	Петрович	02.03.1995

At the bottom of the design view, the following components are visible in the component tray:

- personBindingSource
- personTableAdapter
- tableAdapterManager
- personBindingNavigator

Red arrows indicate the flow of data and control: from the text blocks on the left to the table in the form, and from the text blocks to the corresponding components in the component tray.

При запуске

The screenshot shows the Visual Studio IDE with two windows. On the left is the 'Data Sources' window, which displays a tree view of data sources. Under 'MedDatabaseDataSet', there are two entities: 'Appointment' and 'Person'. The 'Person' entity is expanded, showing five fields: 'Id', 'FirstName', 'SecondName', 'LastName', and 'BirthDate'. The 'BirthDate' field is highlighted with a blue box, and a red arrow points to it from the right. On the right is the 'Form1' design window, which shows a table with five columns: 'Id', 'FirstName', 'SecondName', 'LastName', and 'BirthDate'. The table is currently empty. A red arrow points to the right side of the table, indicating the area to be freed up for a control.

Освободите место (под таблицей или сбоку)

The screenshot shows a Visual Studio environment with two windows. On the left is the 'MedDatabaseDataSet' data source tree, which includes a 'Person' table with fields: Id, FirstName, SecondName, LastName, and BirthDate. The 'BirthDate' field is highlighted with a blue box. On the right is a 'Form1' window displaying a data table with columns: Id, FirstName, SecondName, LastName, and BirthDate. A red arrow points from the 'BirthDate' field in the table to a date picker control in the form. The date picker is labeled 'Birth Date:' and shows the date '18 марта 2019 г.'.

The image shows a Visual Studio interface with two main windows. On the left is the Solution Explorer, and on the right is a form window titled 'Form1'.

Solution Explorer (Left): Shows a project named 'MedDatabaseDataSet'. Underneath, there are two tables: 'Appointment' and 'Person'. The 'Appointment' table is selected and highlighted with a blue box. Its fields are: Id, PersonID, Date, Time, Diag1, DiagFull, Medication, NexAppDate, and NextAppTime. A red arrow points from the 'Appointment' table in the Solution Explorer to the table in the form window.

Form1 (Right): Shows a data table with the following columns: Id, FirstName, SecondName, LastName, BirthDate. The table is currently empty, showing only a header row and a single row with an asterisk in the 'Id' column. To the right of the table is a 'Birth Date:' label and a date picker control showing '18 марта 2019 г.'. Below this table is another table with the following columns: Id, PersonID, Date, Time, Diag1, DiagFull, Medication, NexAppDate, and NextAppTime. This table is also empty, showing only a header row. The form window has a status bar at the top showing '0 of {0}' and navigation icons.
