GC-F439WAQK

Trainer: **Evstratkin Nikita**

Оглавление

GC-F439WAQK

ITEMS		SPECIFICATIONS
DIMENSIONS (mm)		595(W)X656(D)X2010(H)
NET WEIGHT (kg)		82
COOLING SYSTEM		Fan Cooling
TEMPERATURE CONTROL	REFRIGERATOR	Knob Dial
	FREEZER	Button
DEFROSTING SYSTEM		Full Automatic
		Heater Defrost
DOOR FINISH		Pre-Coated Metal or Vinyl Coated Metal
OUT CASE		Painted Steel Sheet
INNER CASE		ABS
INSULATION		Polyurethane Foam
DEFROSTING DEVICE		Heater, Sheath
REFRIGERANT		R600a(58g)
LUBRICATION OIL		HTS-60MT (220cc)

| ITEMS	SPECIFICATIONS
REFRIGERATOR COMPARTMENT	Transparent Shelf(3 EA)
	Vegetable Container(1 EA)
	Vegetable Container Cover(1 EA)
	Fresh Zone Container(1 EA)
DOOR POCKET	Dairy Pocket Cover(2 EA)
	Egg Tray(2 EA)
	Little Pocket(5 EA) 4 or 3 EA
	Bottle Pocket(1 EA)
FREEZER COMPARTMENT	Tray Drawer(4 EA)
	Ice Tray(1 EA)
COMPRESSOR	PTC Starting Type
EVAPORATOR	Fin Tube Type
CONDENSER	Wire Condenser

реле в сборе
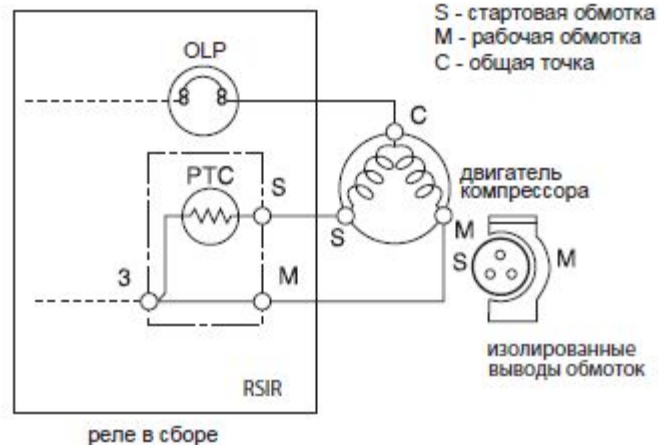

(1) При возникновении какого-либо дефекта, кнопки перестают функционировать. Каждое нажатие кнопки сопровождается сигналом зуммера.

(2) Когда дефект устранен холодильник, возвращается к нормальному функционированию.

(3) Код ошибки (дефекта) холодильной и морозильной камер отображается на дисплее.

(4) Для самостоятельного поиска ошибок необходимо зажать одновременно кнопки REF. Temp. и FRZ. Temp и зажать более чем на 1 секунду. В случае наличия ошибки на дисплей выводится код ошибки. В случае отсутствия ошибок на дисплее засветятся все светодиоды.

NO.	Item	Fault Display	Fault ontent	Remarks
1	Normal	Setting temperature display	None	DISPLAY S/W normal operation
2	Abnormal freezer Sensor	E1	Freezer sensor short or open	Each sensor circuit open /short inspection (Push F key and R key 2S simultaneously, display 5S)
3	Abnormal sensor 1	E2	Refrigerator sensor 1 short or open	
4	Abnormal sensor 2	E3 Cancel	Refrigerator sensor 2 short or open	
5	Abnormal outside sensor	E4	Outside sensor short or open	
6	Abnormal defrost sensor	E5	Defrost sensor short or open	
7	Poor defrost	E6	When the defrost sensor does not reach 7□ or higher after 2 hours' defrost	The temperaturer fuse is broken/The heater is broken/The heater drives RELAY ineffectively (Push F key and R key 2S simultaneously, display 5S)
8	Abnormal freezer BLDC fan motor	E7	When BLDC fan motor drives and no F/B signal for 65s	BLDC MOTOR disconnected and poor DRIVE IC and TR (Push F key and R key 2S simultaneously, display 5S)
9	Abnormal mechanical room BLDC fan motor	E8	When BLDC fan motor drives and no F/B signal for 65s	
10	Poor communication	CO	Poor communication between MainMicom and Display Micom	Interrupted communication and poor transmitting and receiving part (not hide, automatic display)

Press simultaneously

```

Wiring diagram

Does it show E1 on DISPLAY?

FRZ TEMP   REF TEMP
-E1°C   °C

↓ Yes

Does the display PCB become loose? → NO → Reconnect

pin7 pin8   CON4

↓ YES
Power OFF

Tip : To protect MICOM

Is the resistance of Pin7~8 as shown in the following table when seperated con4 from PCB → No → Change F senser

pin7
pin8

Test point	Result
Pin7 to Pin8	1 ~ 150 kΩ

↓ Yes
Insert CON4 again power on

If E1 appears again, replace the main PCB and also explain to the customer!

R senser1 Error

CON4 — Main PCB
3 — purple — R1-Sensor
4 — purple

Wiring diagram
Does it show E2 on DISPLAY?

FRZ TEMP **E2**°C   REF TEMP °C

↓ Yes

Does the display PCB become loose?

→ NO → Reconnect

pin4 pin3 CON4

↓ YES

Power OFF
Tip : To protecct MICOM

Is the resistance of Pin3~4 as shown in the following table when seperated con4 from PCB

→ No → ChangeR1 sensor

→ pin3
→ pin4

Test point	Result
Pin3 to Pin4	6 ~ 300 kΩ

↓ Yes

Insert CON4 again power on

If E2 appears again, replace the main PCB and also explain to the customer!

RT sensor Error

CON5   RT-Sensor
Main PCB   4 Green   [RT-Sensor]
            5 Brown

Wiring diagram
Does it show E4 on DISPLAY?

FRZ TEMP   REF TEMP

↓ Yes

Does the display PCB become loose? → NO → Reconnect

CON5

↓ YES

Power OFF
Tip : To protecct MICOM

Is the resistance of Pin4~5 as shown in the following table when seperated con5 from PCB? → **No** → Change RT senser

→ Pin4
→ Pin5

Test point	Result
Pin4 to Pin5	5 ~ 400 kΩ

↓ Yes

Insert CON5 again power on

If E4 appears again, replace the main PCB and also explain to the customer!

Be First, Do it Right, Work Smart!

DEF-Heater

Wiring diagram
Is the display showing E6?

FRZ TEMP REF TEMP

Yes

Does the display PCB become loose? — NO → Reconnect

CON2

YES

Enter the **TEST 2** mode
Is the voltage **230V AC** between **PIN3** and **PIN9**? — No → Change MAIN PCB

pin3
pin9

Measure	result
pin3 To pin9	230Vac

Yes

Reset TEST 2 MODE（normal）
Is the voltage 0V AC on Pin 3 and Pin9? — No → change MAIN PCB

pin3
pin9

Measure	result
pin3 To pin9	0-2Vac

Yes

Is the resistance as shown in the following table between Pin3 and Pin9? — Yes → **Normal**

pin3
pin9

Measure	Result
Pin3 To Pin9	300 ~ 350 Ω

No

Is the resistance the same value as shown in the following table? — No → **Change the fuse**

(1)red (2) brown

Measure	result
(1) to (2)	0 Ω

Yes

Is the resistance of heater the same value as shown in the following table? — No → Change the heater

(1)brown (2)black the resistance of heater

Measure	result
(1) To (2)	300 ~ 350 Ω

Yes

Is the resistance of the defrost sensor the same value as shown in the following table? Calculate the resistance value based on the temperature — No → Change the defrost sensor

(3) Orange
(4) Orange

the resistance value based on the temperature

| Measure	Result	Measure	Result
-30℃	129.3 kΩ	10℃	19.53 kΩ
-20℃	76.96 kΩ	20℃	13.03 kΩ
-10℃	47.34 kΩ	30℃	8.896 kΩ
0℃	30 kΩ	40℃	6.201 kΩ

Yes

Explain to the customer!
Possible causes: Door seals leaking or too many hot foods are placed in the unit.

F FAN Motor fault

Wiring diagram

Main PCB — CON3:
- 1 — pink
- 2 — green
- 3 — Purple

Housing:
- 5 3 — black → F-FAN
- 4 2 — red
- 3 1 — pink

Is the display showing **E7**?

FRZ TEMP | REF TEMP

Yes

Does the display PCB become loose?

CON3

NO → **Reconnect**

YES

Enter the **TEST 1** mode
Is the voltage as shown between **PIN1** and **PIN2**?

N0 → **Change MAIN PCB**

Pin2   Pin1
F room FAN Voltage

Measure	Result
Pin1 To Pin2	7~16 Vdc

Yes

Enter in TEST1 mode, Is cold air coming out of the refrigerator upper air outlet?

N0 → Check if th fan is freezed or other things

Yes

Is the voltage between PIN2 and PIN3 the same as shown in the table below?

Pin3   Pin2

Feedback Voltages

Measure	Result
Pin2 To Pin3	1~4 Vdc

No → **Change MAIN PCB**

Yes

Explain to the customers

Mechanical Room Motor Fault

Wiring diagram

Main PCB CON3		Housing		C-FAN
4	brown	3 — 3	black	
5	yellow	2 — 2	red	
6	red	1 — 1	pink	

Is the display showing E7?

FRZ TEMP   REF TEMP

↓ Yes

Does the display PCB become loose?

CON3

→ **NO** → Reconnect

↓ YES

Enter the TEST 1 mode
Is the voltage as shown between PIN4 and PIN5?

→ **NO** → Change MAIN PCB

Pin5   Pin4
M FAN Voltage

Measure	Result
Pin4 To Pin5	7~16 Vdc

↓ Yes

Enter TEST1 mode, check the M room if the fan go round.

→ **N0** → Check th fan (Connector, Locked mouse)

↓ Yes

Is the feedback voltage of PIN 5 and 6 as shown as below

Pin6   Pin5

→ **No** → Change MAIN PCB

Feedback Voltages

Measure	Result
Pin5 To Pin6	1~4 Vdc

↓ Yes

Explain to the customers

Communication error

Diagram / Housing

Is the display showing **CO**? — Yes

Does the display PCB become loose? — NO → Reconnect (CON1)

Is the voltage between PIN1 and PIN3 the same as shown in the table below? — YES → Change the PCB

Pin3green   Pin1red — DISPLAY PCB voltage

Measure	Result
Pin1 To Pin3	0 V or 5 V

NO

Is the voltage between PIN3 and PIN5 the same as shown in the table below? — YES → Change the PCB

Pin5 purple   Pin3 green — DISPLAY PCB voltage

Measure	Result
Pin3 To Pin5	0 V or 5 V

NO

Do the connectors on the hinge become loose? — Yes → Reconnect

No

Does the display PCB become loose? — Yes → Reconnect (CON5)

No

Main PCB Is the voltage between PIN4 and PIN6 the same as shown in the table below? — YES → Replace Main PCB

pin6   Pin4 — Transmitting End Voltage

Measure	result
Pin4 To Pin6	0 V or 5 V

NO

Main PCB Is the voltage between PIN4 and PIN7 the same as shown in the table below? — YES → Replace Main PCB

pin7   pin4 — Sending End Voltage

Measure	result
Pin4 To Pin7	0 V or 5 V

NO

If **CO** disappears after connecting the power, and didn't showed after 2 mintues, explain to the customer!

Be First, Do it Right, Work Smart!

Note

1. How to remove a TPA

After repairing the refrigerator, must reattach all TPAs.

2. How to activate the test mode?

Press the test button on the main control panel, and you can enter the test mode.

Test button

Press the test button once: "P1" is displayed, the compressor starts to work, the C-Fan is on, the F-Fan is on, and the air damper of the refrigerator is open.

Press the test button twice: "P2" is displayed, the compressor stops working, the defrost heater is on, the air damper of the refrigerator is closed, the F-fan is off, and the C-Fan is off.

Press the test button three times: return to the normal mode.
