

# Presentation about a fox

Veremeenko Andey 8B

# Appearance

- To start with, fox has a long tail and white-orange fur which protects it from rough wind and heavy snow in winter. It has a cute face with triangular ears. Furthermore, fox uses short legs to run quite fast.

# Nutrition

- What does fox prefer eating? The fox hunts small rodents, hares, birds, reptiles, beetles. In winter, field mice make up the diet. Although, fox does not hunt big mammals, but if fox does not have any ways, fox will try to hunt roe deer.

# Results

- To sum up, fox is the most common animal in a forest or taiga. It has special appearance which any animals does not have. Fox has almost the same nutrition as forest animals. Honestly, the fox looks the same as lynx, but lynx has leopard color, so do not confuse them.

- Thanks for your attention!
