

Mikhail Lomonosov  
19.11.1711 – 15.04.1765

The first Russian scientist-naturalist of world importance, lexicographer, chemist and physicist; he entered into a science as the first chemist who gave the definition of physical chemistry, very close to the modern  
A striking example of the "universal man"

He has developed a vertical take-off aircraft - the first prototype of the helicopter with two screws

His discoveries known abroad, his name is often heard in the court of the Empress.

This is Portrait of Peter I. Mosaic. Scored by MV Lomonosov. 1754. Hermitage

Lomonosov was a  
genius. Russia  
remembers about him,  
Russia is proud of him!
