

COMPRESSOR FUNCTIONAL DESIGN PREVIEW

Functional design

- This document illustrates the key features of the compressor
- The following slides shows the most innovative elements of the compressor design.
- Note that this is a functional representation of the compressor components. The detailed constructive design will be provided.

Key features

- The key features of the architecture are the following:
 1. Oil free main bearings, connecting rod and crosshead

Key features

- The key features of the architecture are the following:
 2. Compact lobe-based crankshaft
 3. Considerable reduction of cylinders' center to center distance.

Key features

- The key features of the architecture are the following:
 4. Single-piece connecting rod with no tie-rods.

Overall performances

- Details of the crankshaft
 - Stroke: 100 mm
 - Connecting rod length: 305mm

- The main performances of the compressor at a rotation speed of 1800 rpm are the following:
 - Mean power per cylinder: 250 kW
 - Maximum piston speed: 9,5 m/s
 - Maximum rod load: 90000 kN
