

# Financial Management

“Introduction au  
management (financier) des  
entreprises”

Prof. R. Aernoudt

# Practical

- 3 days – 25 hours
- Interactive and case-based
- Evaluation:
  - 50% case (last course)
  - 50% end exam.
- Course book: Financial Management in practise, intersentia, 2017

# module :Stratégies et financement des entreprises en Europe

Politiques  
monétaires et  
régulation du  
système financier en  
Europe

- Prof. Esther Zana-Nau

Marché financiers  
en Europe, les  
marchés d'actions,  
les marché  
d'obligations et les  
marchés des dérivés

- Prof.  
Vincent Fromentin

Management  
(financier) des  
entreprises

- Prof. Rudy Aernoudt

# Content

1. Basis concepts Financial Management
2. Investment analysis
3. Credits
4. Value of a company
5. Venture capital
6. Business angels (crowdfunding, lovemoney, BA)
7. Reality cases
8. Wrap-up

# Definitions

## Financial Management:

- *"Increase the value of the company for the shareholders"*
- "Shareholders value approach"
- Corporate governance

# Importance of financial management

- Two main reasons for bankruptcy:
  - Management
  - Financing
- Major obstacle growth:
  - Lack of financing
- CEO versus CFO

# Comments

## 1. Managerial revolution

- Maximising versus satisfying behaviour
- Agency theory (Jensen & Meckling): solution
  - Options/tantièmes
  - Shares
  - Cooperatives (Marx)

## 2. Stakeholders value

- Customers, supplier, staff, region, environment, ..
- ESG score
- Triple bottom approach (people/planet/profit)
- Ex. Nike, Anita Roddick, Shell, ..

## 3. Human resources

- Main value leaves the company in the evening

# What type of company?

# “Not all companies are the same”

five types	Financial needs	Actors	Comments
<b>Mice and SME (85%)</b>	limited	Banks/ subsidies	PBC Garantuees
<b>Eliphants (1%)</b>	NO – are liquid	Play themselves banker	P2P
<b>Zombies (10%)</b>	Survival credits	Banks/ subsidies	Operational pofits < fin. costs
<b>Gazelles (4%)</b>	Equity fin	VC/BA	"Happy few"
<b>Unicorns (0 %)</b>	Scale-up money	Scale-up funds	Scale-up gap

# Not all the money is the same

	<b>Pros</b>	<b>Cons</b>
<b>1. Friends, family &amp; fools</b>	<ul style="list-style-type: none"><li>- easy to get</li><li>- patient</li></ul>	<ul style="list-style-type: none"><li>- limited added value</li><li>- no deep pockets</li></ul>
<b>2. Public sources</b>	<ul style="list-style-type: none"><li>- free</li><li>- patient</li></ul>	<ul style="list-style-type: none"><li>- bureaucratic</li><li>- slow, hard to locate</li></ul>
<b>3. Banks</b>	<ul style="list-style-type: none"><li>- potentially cheap</li><li>- relatively fast</li></ul>	<ul style="list-style-type: none"><li>- unpredictable</li><li>- require security, impatient</li></ul>
<b>4. Business angels</b>	<ul style="list-style-type: none"><li>- fast, unbureaucratic</li><li>- business understanding</li></ul>	<ul style="list-style-type: none"><li>- no deep pockets</li><li>- often unsystematised</li></ul>
<b>5. Private equity</b>	<ul style="list-style-type: none"><li>- deep pockets</li><li>- value added easy to ascertain, clear agenda</li></ul>	<ul style="list-style-type: none"><li>- potentially unpredictable agenda, potentially slow</li><li>- high expectations</li><li>- difficult to get</li></ul>

# I. Financial management (narrow)

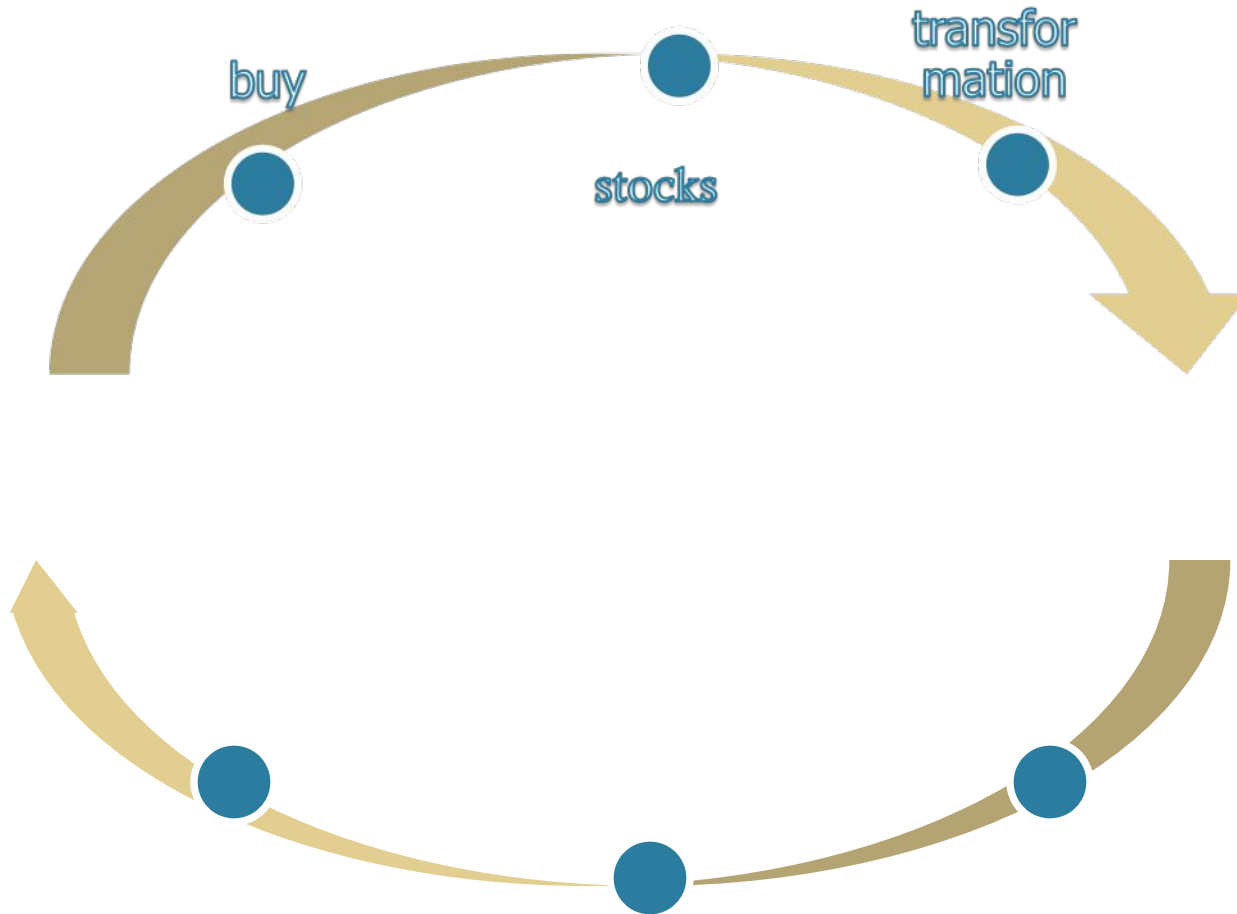

## **How to finance my company?**

- Own funds
  - Capital
  - Reserves
  - Reported results
- Mezzanine (quasi-own funds)
  - Subordinated
  - Convertible
- Debts
  - Short term
  - Long term

# Balance sheet

<b>Assets</b>	<b>Liabilities</b>
<b>Fixed assets</b>	<b>Own funds</b>
<b>Floating assets</b>	<b>DLT</b>
	<b>DST</b>

# Entreprise cycle

# P&L

<b>Costs</b>	<b>Revenues</b>
<b>Buys</b> <b><u>Added value</u></b> <b>BRUTO MARGIN</b> <b>COSTS</b> <b>GROSS PROFITS (EBITDA)</b>	<b>TURNOVER</b>
<b>DEPRECIATION</b> <b>PROFIT BEFORE FIN RESULTS (EBIT)</b> <b>FIN RESULTS</b> <b>GROSS PROFITS (EBT)</b>	$CF = CIF - COF$ $= \text{Result} + \text{Depreciation}$
<b>TAXES</b> <b>NET PROFIT</b>	P&L impact on own fund

# II. Financieel management (broad)

## 1. **Management working capital:**

**How big is it?**

**How influence level**

**Hoe influence the need**

## 2. Dividendpolicy:

Payout ratio

Miller-Modigliani

## 3. Investeringsanalysis

DCF methode

Payback methode

$$WC = OF + DLT - FIXED$$

$$WK = FLOATING - DST$$

<b>Assets</b>	<b>Liabilities</b>
<b>Fixed assets</b>	<b>Own funds</b>
----- <b>Working capital</b> <b>Floating assets</b>	<b>DLT</b>
	<b>DST</b>

# Financial plan

- Means are bigger than needs
- Objective: determine financing modalities
- Case: CVBA Lakatos (p. 62)
- Make exercises 1 & 2!

# Bankruptcy prediction Models

## DEFAULT RATE

1. Alarm levels
2. Altman
3. Multiple regression-analysis

# Summary

	NORM	AL	Comments
OF/TA (solv)	1/3	15%	Quasi-capital
WC (liq)	Acid test Turnover	WC: 10%	Liquidity trap
CF/TA (rend)	8 à 12% PBC	6%	Gearing; $CF/TA = CF/Turnover \times Turnover/TA$

# II. Financieel management (broad)

## 1. Management working capital:

How big is it?

How influence level

How influence the need

## 2. **Dividendpolicy:**

**Payout ratio**

**Miller-Modigliani**

## 3. Investeringsanalysis

DCF methode

Payback methode

## II. Financial management

- Dividendpolitiek: Payout ratio
- Three theories:
  - Letzenburger-Ramaswany: paying div. Increases taxes
  - Gordon: "bird in the hand"
  - Miller-Modigliani:
    - Value of the company =  $f(\text{profit capacity})$   
=  $f(\text{investment policy})$   
Not dividend policy of financing policy
    - comments:
      - Fiscality
      - Perfect financial markets

# II. Financieel management (broad)

## 1. Management working capital:

How big is it?

How influence level

Hoe influence the need

## 2. Dividendpolicy:

Payout ratio

Miller-Modigliani

## 3. **Investment analysis**

**DCF methode**

**Payback methode**
