

INTRODUCING THE
EB76CNC3 S Line

IMPROVEMENTS ON CURRENT EB76CNC6 V5

- ✓ *LONG OPERATING LIFE AND MORE RELIABILITY*
- ✓ *INCREASED MACHINE CAPACITY*
- ✓ *IMPROVED REPEATABILITY*

Thanks to.....

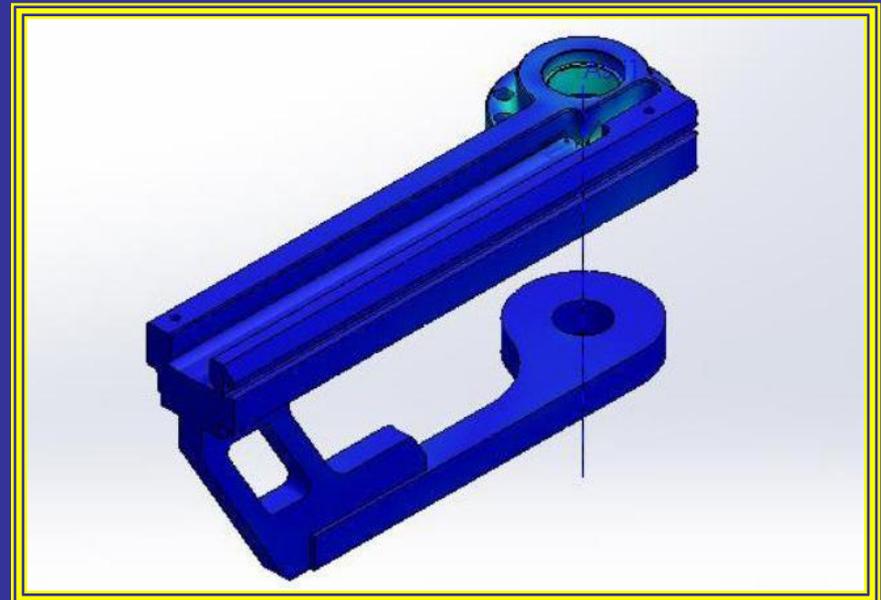

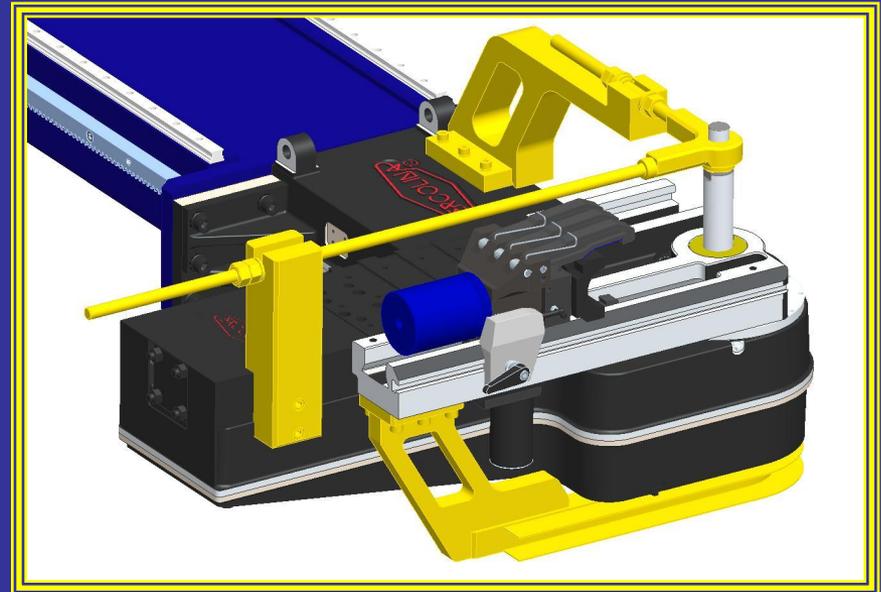

IMPROVEMENTS ON CURRENT EB76CNC6 V5

***Redesigned bend axis supported
by oversized heavy duty tapered
roller bearings.***

IMPROVEMENTS ON CURRENT EB76CNC6 V5

Additional tie bar that supports the bend arm from under the bend axis eliminating flection of the bend arm while bending, along with a “dual vector” tie bar in stainless steel to support the bend shaft.

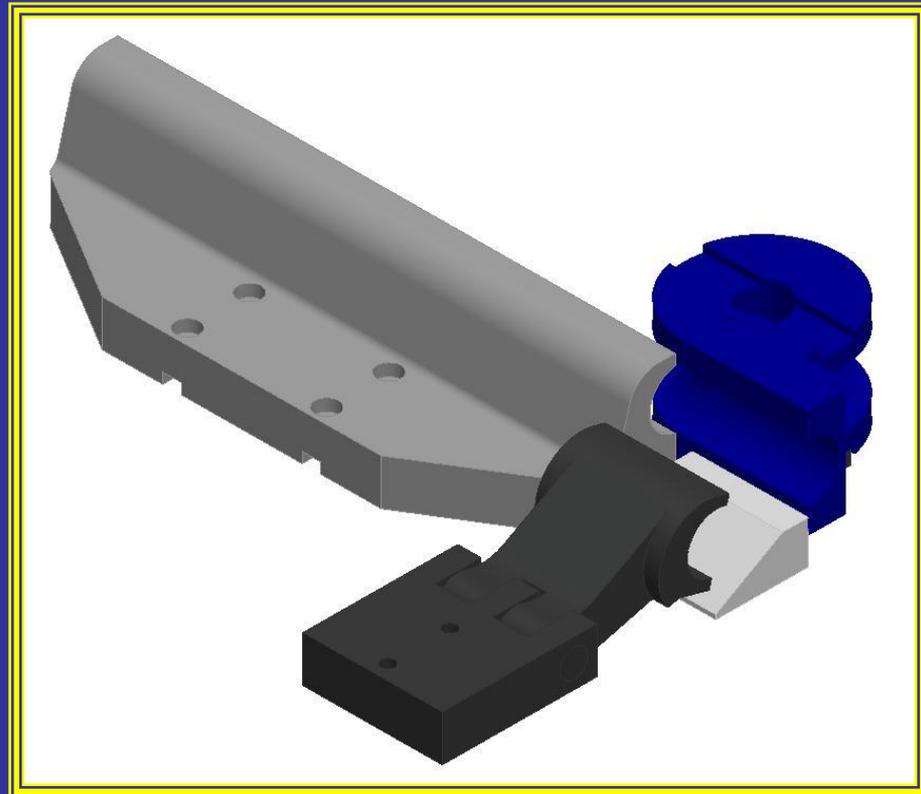

EB76CNC3 S Line

INTRODUCING NEW EB76CNC3S

Designed and developed to bend serpentine profiles, 180-degree bends, for refrigerator's condensers or evaporators and other applications, with minimum radii $2 \times \varnothing$.

New EB76CNC3S basically allows to produce serpentines thanks to a new kit of tools specifically developed.

In addition the Ercobender S-Line, with Y and B electrically controlled by brushless motors and C Bending Axis hydraulically driven, has been further improved with respect to the already high performance V5 currently in production.

FURTHER IMPROVEMENTS ON NEW EB76CNC3S

- ✓ *New Slide with recirculating balls guideways*
- ✓ *New Improved Booster*
- ✓ *More powerful Brushless Motors increasing B&Y axis speed*
- ✓ *Enhanced Hydraulic System makes bending speed faster*
- ✓ *New control system*
