

**Meaning Formation.
Meaning and Notion.
Meaning in Morphemes.**

English Lexicology, lecture 4.
Ecaterina Albu, MA, senior
university lecturer

- 
- **2 approaches to word meaning**
 - **Meaning and Notion**
 - **Types of Word Meaning**
 - **Types of Morpheme Meaning**

Semantics

branch of linguistics which studies **meaning** of words and **word equivalents**

2 Approaches to Word Meaning

- The **Referential** Approach
- The **Functional** Approach

Referential Approach

to understanding meaning

- essence of meaning => **interdependence** between **words** and **things** or **concepts** they **denote**
- distinguishes between **3 components** closely connected with meaning:
 - the **sound-form** of the linguistic sign
 - the **concept**
 - the **referent**

Semantic Triangle

a small animal with fur,
four legs, a tail, and
claws, usually kept as a
pet or for catching mice

Cute, independent, elegant,
intelligent, mean, ancient Egypt,
bad luck,

concept

(thought, reference)

the thought of the object
that singles out its essential
features

sound-form

(symbol, sign)
linguistic sign

/kæt/

猫

Cat (Eng)
Pisica (Ro)
Кот (Ru)
Neko (Jap)
Katze (Germ)
Gato (Sp)

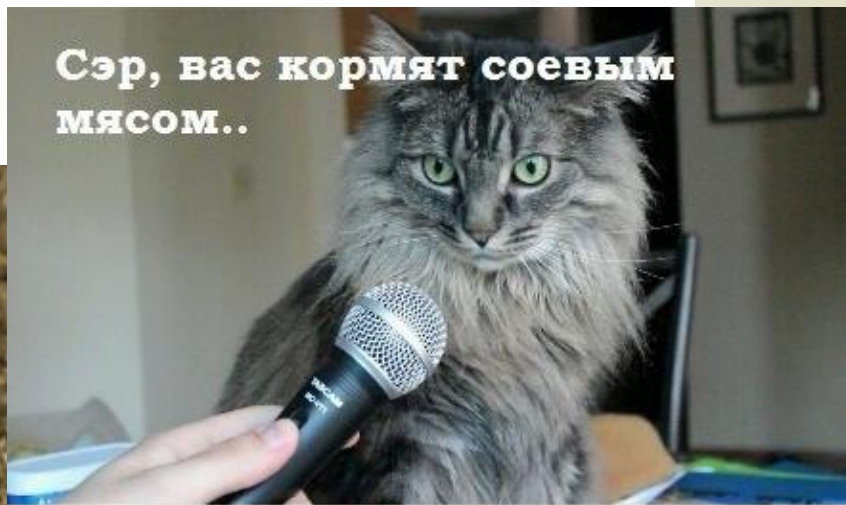

referent

object
denoted by
the word, part
of reality

Сэр, вас кормят соевым мясом..

Meaning and Sound-form

□ are not identical

cat (Eng)
pisica (Ro)
кот (Ru)
Katze (Germ)
gato (Sp)
neko (Jap)
chat (Fr)

different
sound-forms
MAY convey
one and the same
mng

- 
- nearly identical sound-forms may have different meanings in different languages

e.g. [kot] English – a small bed for a child - **cot**

[kot] Romanian – elbow - **cot**

[kot] Russian – a male cat - **КОТ**

- identical sound-forms may have different meanings (**homonyms**)

e.g. **knight** [nait]

night [nait]

□ even considerable changes in sound-form do not affect the meaning

e.g. OE *lufian* [luvian] – love [lʌv]

What's a "cat"?

a small animal with fur, four legs, a tail, and claws, usually kept as a pet or for catching mice

Meaning and Concept

- concept is a category of human **cognition**
- concept is **abstract** and reflects the most **common** and **typical features** of different objects and phenomena in the world
- concept is **almost the same** for the whole humanity in one and the same period of its historical development
- meanings of words are **different** in different languages

- 
- **identical concepts may have different semantic structures in different languages**

e.g. concept “a building for human habitation” – in English HOUSE ≠

in Russian ДОМ (+ “fixed residence of family or household”) => HOME

- **one and the same concept possess meaning which is felt as different in each of the units**

e.g. “young child” – child, baby, babe, infant

Meaning and Referent

- referent is **beyond** the scope of Ige
=has nothing to do with Ige
- one and the same **object** (referent)
may be **denoted** by **more than one
word** of a different meaning

*e.g. cat – kitty, animal, that stupid thing,
monster, pig*

Один иностранец путешествовал по российским глубинкам, и в одной из деревушек увидел, как бабка **гусей** гоняет, приговаривая "Пошли, пошли **собаки**", тот ничего не понимая заглядывает в словарь (нет, все вроде верно - **гуси**), тогда он спрашивает у бабки "Это **гуси**?"

Она ему отвечает

"Да **гуси, гуси**" - "А почему же вы их тогда **собаками** называете?"

- "Да потому что они мне, **свиньи**, весь огород вытоптали!!!!!"

angel

Meaning

- a component of a word through which a concept is **communicated**, in this way giving the word the **ability** to **denote objects, qualities, abstract notions**

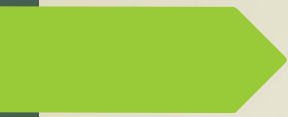

Functional Approach

to understanding meaning

- studies the **functions** of a word in speech
- meaning of a word is studied through **relations of it with other linguistic units**

e.g. **to move** (we move, move a chair)

movement (movement of smth, slow movement)

□ Notion denotes the **reflection in the mind of real objects** and phenomena in their relations

□ Notion is a **unit of thinking**

□ Lexical meaning is the realization of a notion by means of a **definite language system**

□ Word is a **language unit**

Lexical Meaning and Notion

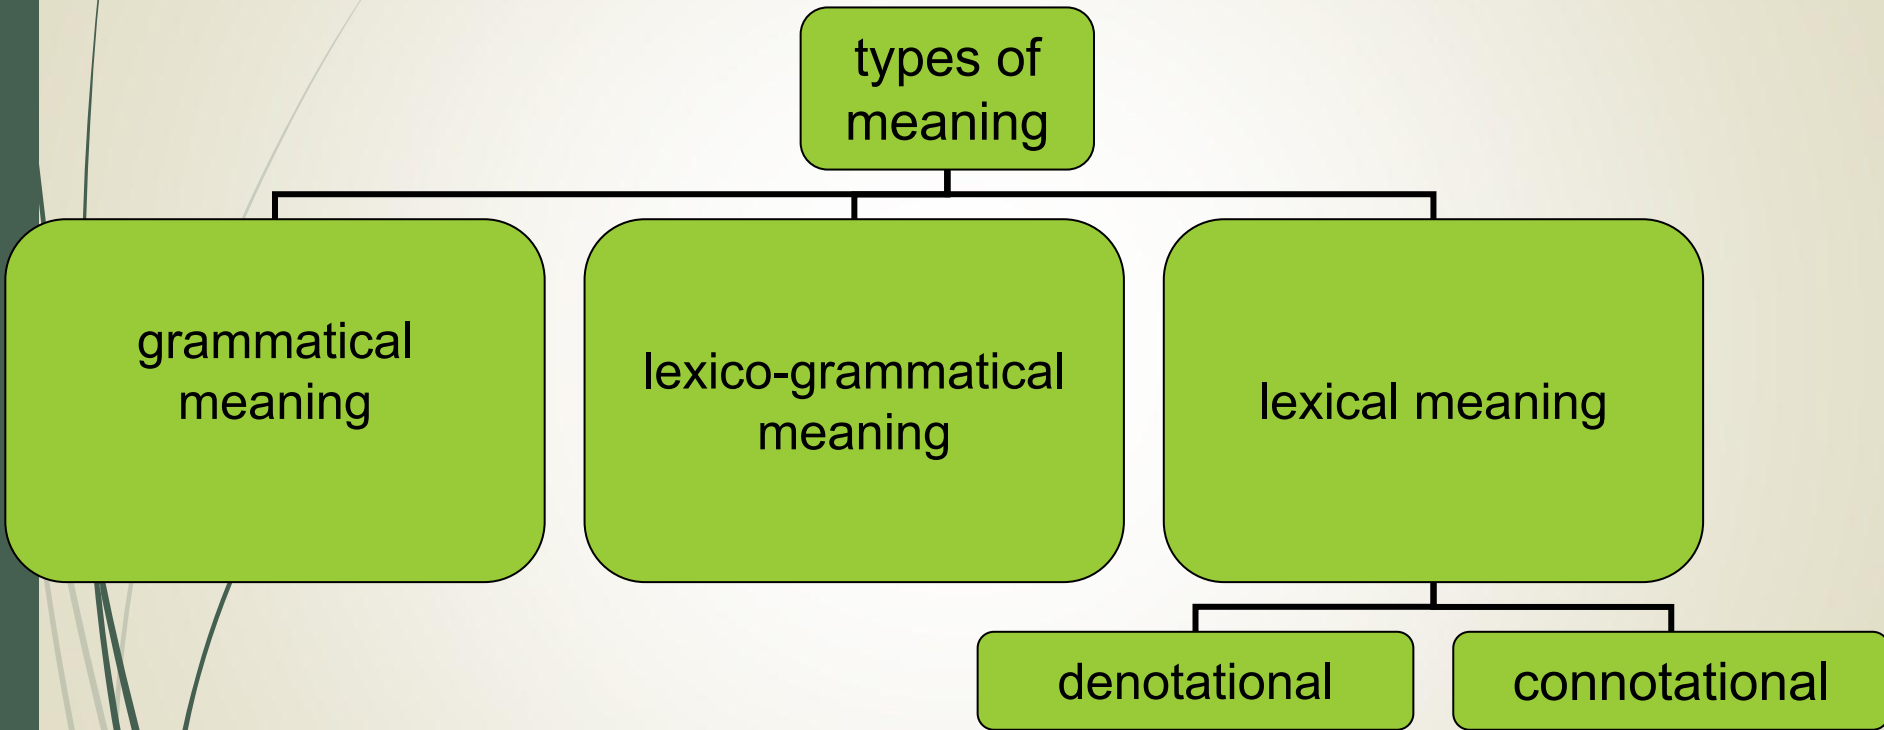

□ Notions are always **emotionally neutral** as they are a **category of thought**.

child

□ Lexical meanings convey not only reflection of objective reality but also the **speaker's state of mind** and his **attitude** to what he is speaking about.

kid, brat, sweetie

Types of Meaning

Grammatical Meaning

- component of meaning recurrent in identical sets of individual forms of different words

e.g. **girls, winters, toys, tables** –

grammatical meaning of **plurality**

asked, thought, walked – meaning of **past tense**

Grammatical inflection	MEANING
-ed	Past simple
-ing	Continuous aspect
-s / -es	Present Simple, 3rd person, singular
-s	Plural
-'s	Possessive case
-er	Comparative degree
(the) -est	Superlative degree

Lexico-grammatical meaning

- Name of all the meanings of words belonging to a lexico-grammatical class

e.g. **action** – *generic term for verbs*

- words of one lexico-grammatical class have the same **paradigm (set of all grammatical forms)**

Lexical Meaning

- component of meaning proper to a word as a linguistic unit met in all word-forms

e.g. **go-goes-went-gone**

lexical meaning – **process** of movement

grammatical meaning – **tense** and **person**

Morphemes have

- **lexical** mng
- **differential** mng
- **functional** mng
- **distributional** mng

Lexical Meaning in Morphemes

□ **root-morphemes** that are **homonymous** to words possess **lexical** meaning

e.g. **boy** – **boyhood** – **boyish**

□ affixes have lexical meaning of a more **generalized** character

e.g. **-er** – *agent, doer of an action*

*teacher**er**, worker**er**, writer**er**, computer**er***

Lexical Meaning in Morphemes

□ has **denotational** and **connotational** components

e.g. **-ly, -like, -ish** – denotational meaning of similarity – **womanly, womanlike, womanish**

connotational component - **-ly**
(positive evaluation), **-ish**
(derogatory)

Differential Meaning

- a semantic component that serves to **distinguish one word from all others** containing **identical** morphemes

e.g. **cranberry, blackberry, raspberry, strawberry**

Functional Meaning

- found **only** in **derivational** affixes (suffixes, prefixes)
- a **semantic** component which serve to refer the word to the certain **part of speech**

e.g. just, adj. – justice, n.

effect, n. – effective, adj.

Distributional Meaning

- the meaning of the **order** and the **arrangement** of morphemes making up the word
- is found in words containing more than one morpheme
- **different arrangement** of the same morphemes would make the **word meaningless**

*e.g. sing- + -er = singer,
-er + sing- = ?*
