

Electric guitar

What is this?

An electric guitar is a guitar that uses one or more pickups to convert the vibration of its strings into electrical signals. The vibration occurs when a guitar player strums, plucks, fingerpicks, slaps or taps the strings. The pickup generally uses electromagnetic induction to create this signal, which being relatively weak is fed into a guitar amplifier before being sent to the speaker, which converts it into audible sound.

Short history about Electric Guitar

First pickup was constructed by Lloyd Loar in 1924 (Lloyd was engineer in firm called Gibson. This firm most popular firm that's make high quality electric guitar.) First electric guitar made in 1931 by firm 'Electro String Company' and was called 'frying pan' because she look's like this.
