Competent and professional design of the model of the future instructor of foreign languages

Adopting 21st century pedagogy requires teachers to rethink their reasoning about *what* they teach and *why*, and to rethink *who* they are as teachers.

It requires them to 'resituate themselves professionally, not as a traditional teacher, but as a highly skilled advanced learner'

Information and communication technology

ICTs must be
integrated into teacher education
programmes and become
commonplace as a tool used throughout
teaching careers

Virtual Reality: The Next Generation Of Education, Learning and Training

❖   For the education sector, VR is an opportunity to finally connect with both learners and teachers in a novel and meaningful way.

❖   VR can enable experiential learning by simulating real-world environments. Students can test their skills, record their work and interact with experts all within VR.

The benefits of incorporating VR/AR tech into educational experiences include better, more immediate engagement and the opportunity for learners to "feel" the experiences and better remember and express what they learned.

A student can experience what was not possible to experience before and become better prepared for when such experiences occur in the real world.

Merits

- Life-like environment
- Interaction with native speakers
- Virtual games
- Visit learning language-focused locations
- Easy to memorize with the help of visual aids
- Tech-centered world
- VR is entertaining

A recent study shows that *"93 percent of teachers say their students would be excited to use virtual reality and 83 percent say that virtual reality might help improve learning outcomes."*

Samsung's statement

Samsung is committed to empowering students and teachers through technology, and we're excited to work with educators to create new learning opportunities with virtual reality."

In summary

• *Virtual reality can provide an immersive, avatar-based environment where you can meet individuals from different countries, learning language, culture, and pronunciation from native speakers*

• *Overcome distance by working via an avatar from your own computer*
