Carton Wheel Flow – Floway II

Hervé MERIEAU Interroll La Roche-sur-Yon

#### Carton flow bed presentation

Maxi load: 200kg/m<sup>2</sup>

Adjustable drop-out tray

15° drop-out tray

5° drop-out tray

Standard bed with end stop

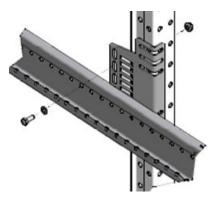

max. cantilever on loading\*:200 mm

\*500 mm on demand

Fits easily in any racking with universal connectors

32mm in std – 23mm in option

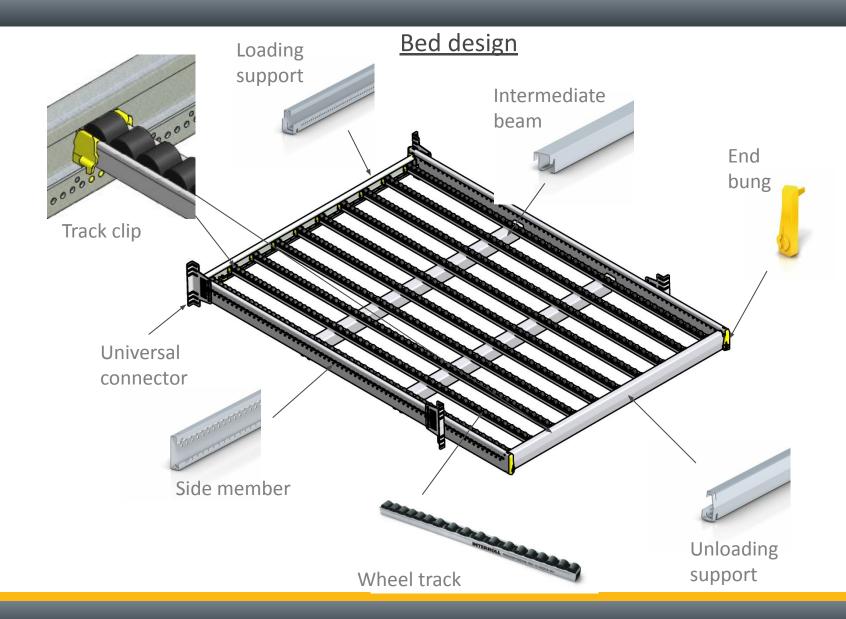

#### Loads / limits of use

- ☐ Mostly for
  - Cartons with 5,5% slope
  - Plastic boxes with 3,5% slope
  - Max. 25 kg (see Ergonomic norms)
- ☐ Temperature range: 30 °C to + 45 °C

Intermediate beam

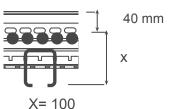

X = 67

X = 79

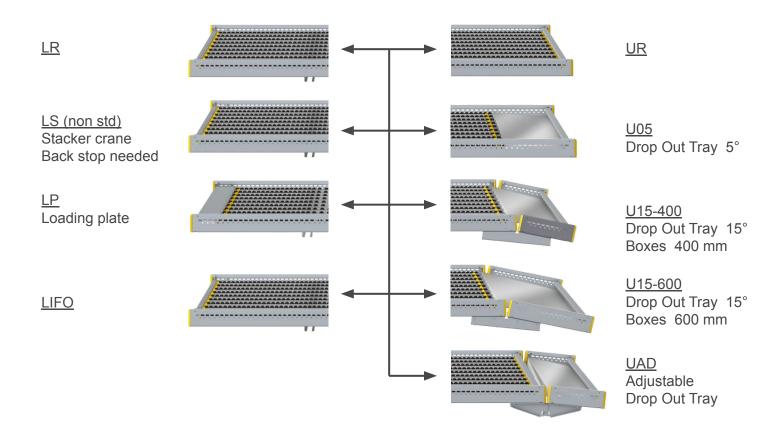

X= 88

Beam height automatically defined by calculation program

#### The different configurations

#### The wheel track

- Pyramidal shape to never open under heavy loads.
   The heavier the load, the better the profile is closing
- ☐ Full width steel axle 3mm diameter
- ☐ Strong polymer bearing Y shape design
- ☐ Galvanized finish for better <u>protection against corrosion</u>

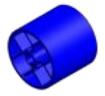

Std color

Non std color

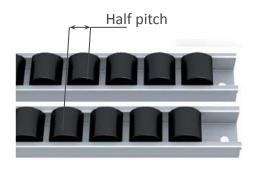

#### Possibilities of optimisation

#### Staggered wheel tracks

- Better restart
- To reduce the noise

#### Bed frame

- Adaptable to the required load with a large choice of intermediate beams
  - □ 66mm
  - □ 54mm
  - □ 45mm
  - □ 33mm

#### Possible combinations

Stand alone Rack

Picking tunnel

Integrated conveyors

#### To summarize

#### Beds

- Compatible with any racking Universal connector
- Many possible configurations
   Combination with Conveyors, automatic loading system

#### **Tracks**

- Never open under loads
   Pyramidal shape
   The heavier the load, the better the profile is closing
  - Excellent flowability
     Full width steel axle
     Reduced slope:
    - More space
    - Less noise
    - Reduced impacts
    - Reduced lane pressure
    - Additional level possible

#### Guides

#### Brake clip
