

Internet

Definition

The Internet is a global system of interconnected computer networks that use the standard Internet protocol suite(TCP/IP) to link several billion devices worldwide.

Network of networks

It is an international *network of networks* that consists of millions of private, public, academic, business, and government packet switched networks, linked by a broad array of electronic, wireless, and optical networking technologies.

Internet Growth Statistics

As of June 2012, more than 2.4 billion people - over a third of the world's human population - have used the services of the Internet; approximately 100 times more people than were using it in 1995.

Internet Usage

Most traditional communications media including telephone, music, film, and television are being reshaped or redefined by the Internet, giving birth to new services such as voice over Internet Protocol (VoIP) and Internet Protocol television (IPTV).

Internet Usage

Newspaper, book, and other print publishing are adapting to website technology, or are reshaped into blogging and web feeds.

Internet Usage

The Internet has enabled and accelerated new forms of human interactions through instant messaging, Internet forums, and social networking.
