Scripting Engine
Portscan Script
Version Info Script
Exploit Script
Professional Output
Database Processing
Reporting
Conclusion

Introduction

Introduction 2/3: Presentation Goals

- are:
 - Presentation of Nmap Scripting Engine
 - Development of NSE scripts
 - Data processing within security tests
- are not:
 - Generic introduction to Nmap
 - Generic introduction to Lua programming

Introduction
 Scripting Engine
 Portscan Script
 Version Info Script
 Exploit Script
 Professional Output
 Database Processing
 Reporting
 Conclusion

Introduction 3/3: The Problem

- Vulnerability assessments deserve only a limited amount of resources/time:
 - Scans must be very fast
 - Results must be *very accurate*
- Large networks produce a lot of low-profile scan results; which are still required for systematic exploiting
- ⇒ This is why we use NSE to automate things!

Introduction
 Scripting Engine
 Portscan Script
 Version Info Script
 Exploit Script
 Professional Output
 Database Processing
 Reporting
 Conclusion

Nmap Scripting Engine 1/2: What is NSE

- NSE stands for Nmap Scripting Engine
- NSE is a modular system to enhance Nmap
- NSE is using Lua to run scripts (similar to NASL for Nessus)
- NSE scripts are usually located at:
 - /usr/share/nmap/scripts (Unix/Linux)
 - %ProgramFiles%\Nmap\scripts (Windows)

Introduction

Scripting Engine
 Portscan Script
 Version Info Script
 Exploit Script
 Professional Output
 Database Processing
 Reporting
 Conclusion

Nmap Scripting Engine 2/3: What does NSE

- NSE scripts are executed conditionally
- NSE scripts can access basic scan data
- NSE scripts are able to do vulnerability scanning
- NSE scripts are able to do exploiting

Introduction

3 categories = { "default", "safe" }
 5 require "shortport"
 7 description = [[ This simple script identifies open web server ports ]]
9 portrule = shortport.port_or_service(
10
                             {80},
                             { "http" },
11
12
                             {"tcp"}
13
14
15 action = function ()
                           define
                                  und on port " .. port.number
16
           return "Wel
                          when to
17 end
                            run
                                     write
                                     output
```

Introduction
Scripting Engine

Simple Portscan Script 5/5: How it Benefits

- This first script was just an example
- No big benefits from such simple scripts
- Basic data collection and processing demonstrated

Introduction
Scripting Engine

Version Info Script 1/6: Goal

- Use output of version fingerprinting scan
- Further processing of data
- Generation of vulnerabilities as results
- This is a very(!) simplistic and static version of my nmap nse vulscan script posted on 06/03/2010 at the Nmap dev mailing list (http://seclists.org/nmap-dev/2010/q2/726)

Version Info Script 2/6: How it Looks

```
maru@debian:~$ nmap -sV --script=hashdays www.sendmail.org -p25
Starting Nmap 5.21
                       p://nmap.org ) at 2010-10-29 09:51 CEST
Nmap scan report
                            dmail.org (209.246.26.22)
                    enable
Host is up (0.19
                    version
rDNS record for
                            2: services.Sendmail.org
                   detection
PORT STATE SEI
25/tcp open smtp
                     Sendmail 8.14.2.Alpha0/8.14.1
 smtp-fingerprinting: You are using an updated version of Sendmail.
Service Info: OS: Unix
Service detection performed. Pla
                                             ny incorrect results at http://nmap.
                                    validated
org/submit/ .
                                   name and
Nmap done: 1 IP address (1 host
                                             in 2.54 seconds
                                     version
maru@debian:~$ 📙
```

Version Info Script 3/6: How it Works

- Define to test smtp ports and Sendmail only
- Analyze identified software version
- Use data to identify vulnerable software
- Output possible vulnerabilities

Introduction

Database Processing 1/8: Parse xml2db

- The output files of Nmap need to be parsed
- At the moment we are using Ruby scripts
- Parsed results go to desired destination:
 - CSV
 - Excel
 - Access
 - SQL
 - 0
- XML output of Nmap is solid:
 - Valid, flawless and sound XML (unlike Qualys)
 - 99% of Nmap data available (always use -vv)
 - Dedicated accessibility of data fields
 - Aborted scans produce broken XML :(

Database Processing 2/8: XML Example

```
1<?xml version="1.0" ?>
2 <?xml-stylesheet href="file:///usr/local/share/nmap/nmap.xsl" type="text/xsl"?>

Database Processing 8/8: Database Example

finding_id□	host_id□	secissue_id□
1	1	3
2	1	4
3	2	3
4	3	6

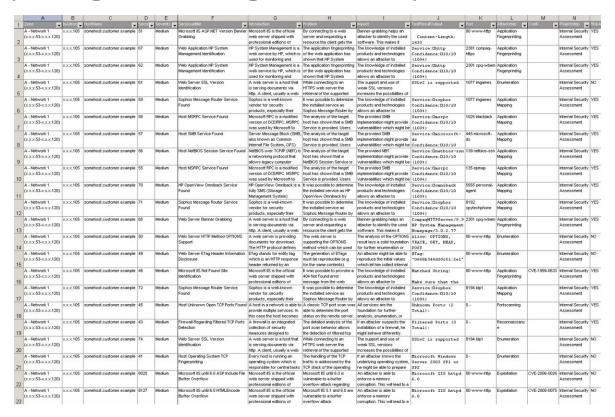

Reporting 1/5: Database Example

tbl_findings. finding_id□	tbl_host. host_ipaddr	tbl_secissues. secissue_title
1	192.168.0.10	Web Server 2.x Found
2	192.168.0.10	Web Server 2.3 Directory Traversal
3	192.168.0.11	Web Server 2.x Found
4	192.168.0.12	FTP Server 4.2 Found

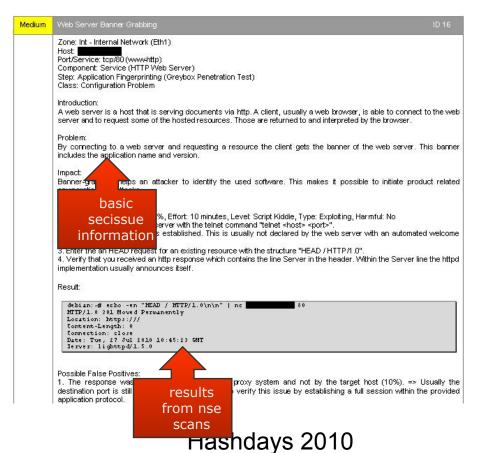

Reporting 2/5: Straight Excel Export

Reporting 3/5: Nice Report Document

Reporting 4/5: Advantages

- Successful handling of a lot of data
- Statistical analysis
- Comparison of:
 - services, hosts, zones
 - products, vendors, releases
 - projects, customers, industries
 - owners, administrators, maintainers
- Trend + performance analysis

Reporting 5/5: Performance Optimization

- Our record of large-scale assessments:
 - 3.212 Hosts
 - \circ 10.278 Ports [=3.1 Ø Port/Host]
 - 27.751 Secissues [=2.7 Ø Secissue/Port]
- Multi-step scanning:
 - (1) Ping sweep (arp, icmp, tcp, udp)
 - (2) Syn scan only (no udp scans, please!)
 - (3) Version detection & script scan
 - (4) Improve scripts ⇒ goto (3)
- Derivative results:
 - No further tests if version detection is accurate
 - Pre-serve results from prior script runs

Conclusion 1/2: Summary

- NSE stands for Nmap Scripting Engine
- NSE is using Lua to provide modular scripts
- NSE allows further data processing
- NSE allows additional request attempts
- Output as XML allows further data processing
- Output wrapper prepares data for processing
- Database allows handling of large data sets
- Database exports are possible (e.g. Excel, PDF)
- Multi-stepping improve flexibility
- Derivative plugins improve performance

Conclusion 2/2: One more Thing ...

- Why do we choose Nmap:
 - Great project from clever people (Thank you!)
 - Very stable releases
 - Frequent development progress
- What we will release after this talk:
 - These slides ;)
 - scip Top 10 Vulnerabilities NSE Scripts
 - Basic Ruby parser xml2csv
