

Green transport is any way or organizational form of transportation.

Our planet suffers from pollution of water, air, atmosphere due to exhaust gases of automobiles, which are billions around the world. In order not to pollute the planet, people came up with a "green" transport that does not pollute the environment.

People create cars that will run on electricity, create environmental cars. For instance:

Tesla is an American company, a manufacturer of electric vehicles and solutions for storing electric energy. The company was founded in July 2003 by Martin Eberhard and Mark Tarpenning, but the company itself considers Elon Musk, Jeffrey Brian Strobel and Ian Wright its co-founders.

In many countries of the world there are such bicycle parking, where by paying money you can sit on it and go wherever you want. This is to make people less likely to use a fuel vehicle.

The first picture shows a car on gasoline, and the second picture shows an electric car.

People, don't let the Earth
become like that!

Remember that your health and surroundings are in your hands. You choose in what conditions your children will live so that do everything good not only for yourself, but also for them.

The end
