

# Crafts from waste

The work performed student 8 "B" class Korobtsov  
David

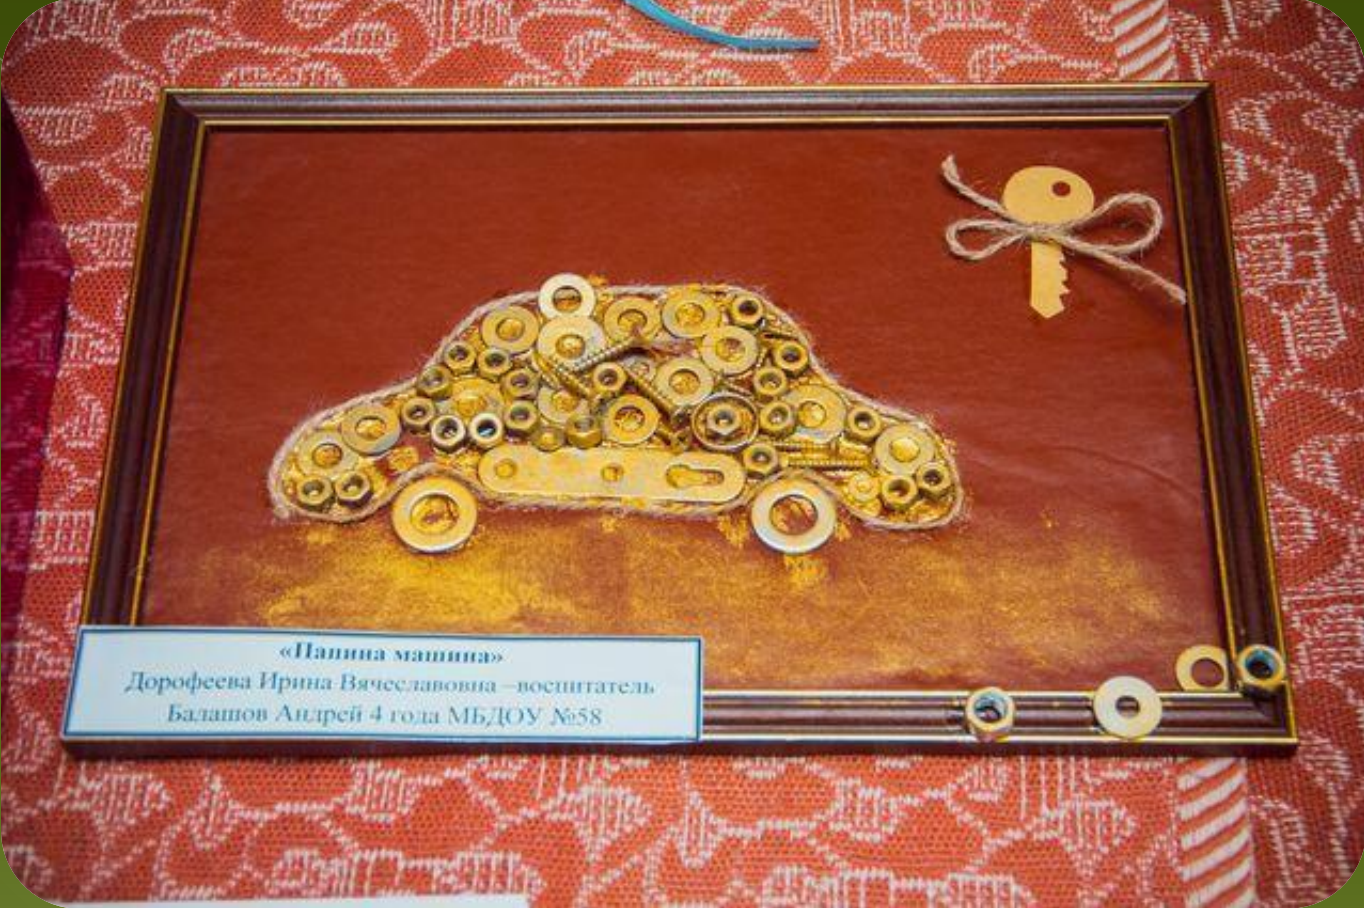

These works are carried out in the art of weaving from the newspaper tubes. Such beauty! You would not believe that the material for them served as the old newspapers. A large number of hand-made articles from newspapers indicating the growing popularity of this type of work. If you want to learn the art of weaving from the newspaper tubes, on the Internet there is a sea of materials and workshops on this topic.

Many crafts can be made from plastic waste. It is terrible to imagine how much we throw away plastic bottles, packaging of products, packages and so on. If the paper is naturally processed relatively quickly for 3 months, the maximum - 1 year, the plastic - for 200 years! Everyone can reduce the amount of waste discharged into the plastic. For example, it is possible to give preference to products in cartons and grocery shopping than with a plastic bag, and the bag with durable fabric. More can be made from waste plastics various crafts.

Many fathers and grandfathers in the closet you can find some very interesting little things, such as radio, cogs, shurupchiki. This is - the whole scattering of jewels to the young wizard. Of these, you can build anything on a technical topic that is sure to please boys.
