

# GLOBAL WARMING G

The background of the slide is a high-angle, wide-area photograph of a natural landscape. The terrain is covered in a dense, textured layer of vegetation, appearing as a mosaic of light and dark green and brown tones, characteristic of a savanna or prairie. The horizon is visible in the upper third of the frame, with a clear, bright blue sky above it. The overall scene is bright and clear, suggesting a sunny day.

The atmosphere already has  
a natural supply of  
“greenhouse gases”

They capture heat and keep Earth  
warm enough for us to live in

uninhabitable frozen wasteland

# Factories

# Burn more and more

# fossil fuels

to run our cars

# Planes

Gases can stay in  
the atmosphere  
for at least 50  
years and even up  
to centuries

The globe is heating up

Is it a big  
difference?  
Let's  
consider this

## Temperature change in last 100 thousand years

Ice is rapidly  
disappearing

Mountains  
are melting

# Coral reefs

# Paris Climate Summit

The heads of state or government of more than **100** countries

We will cut our emissions by 40%, compared with 1990 levels, till 2030

We will cut our emissions by 28%, compared with levels, till 2025

We need financial help that will enable us to invest in clean technology to cut our emissions

**THANK YOU**
