- Manned (logistic/combat) Ground Vehicles

<u>Due to their size & (multi-physics)</u> <u>signatures</u>

RMA Planning "Shortfalls" (NPS)

• "Indications of the innovative paths adversaries might take or how they might adapt technologies from the civilian world"

(Being worked in the "Technical War Games")

• "The path from todays systems and capabilities to those hypothesized for the future (2020+)"

What is needed is a "Then Year" (~2030) Serious/Holistic Vision of Warfare Changes Resulting from the On-going IT/Bio/Nano/Virtual Technological Revolutions

- Such does not exist, "bumper sticker" attempts extant.
- All are agreed, warfare will become increasingly robotic and probably more affordable, swarms of sensors/shooters are a given.
- A longer term "Vision" of these changes would enable "mapping" from the present, NOT AT ALL CLEAR HOW TO "Get There From Here" as do not know where "there" is!
