Definitions

- **Cross-platform** – software running on more than one hardware platform or operating system.
- **GNU General Public License** – license for free software, by which the author transfers the software to public property.
- **Proxy** – program complex that acts as an intermediary between the user and the target server, allowing clients to perform indirect queries to other network services.

Telegram protects freedom and confidentiality

© DUROV

Advantages

- 1) Privacy and Security
- 2) Information transfer rate
- 3) Cloud structure
- 4) Editing messages
- 5) Design
- 6) Full version for PC.

Components

- Group - chat with several people.
- Supergroup - interest group
- Secret Chat - messages with a delete timer. The history of such chats is stored only on the devices of participants.
- Channel - mass mailings
- Bot - special accounts in the system that execute your commands and automate routine operations.
- Stickers - a set of pictures with which you can replace some words or even suggestions in communicating with friends.

Reasons of blocking in Russia

- 1) the telegram leader's refusal to give the FSB the keys to decrypt messages
- 2) idea to develop its own crypto currency
- 3) communication operators
- 4) struggle against opposition

Make your choice through discussion

Are the reasons fair?

Thanks for your attention!
