Maxim

# WHO IS IVAN PETROVICH PAVLOV

Ivan Petrovich Pavlov (September 14, 1849 – February 27, 1936) was a Russian physiologist, psychologist, and physician. He was awarded the Nobel Prize in physiology or medicine in 1904, for research pertaining to the digestive system. Pavlov is widely known for first describing the phenomenon of classical conditioning, which led to great advances in understanding learning as studied in comparative psychology, and to the school of psychology known as behaviorism. His work was outstanding as a pioneer researcher of human nature and behavior using scientific techniques. Although he held strong views about human nature, especially denying dualism between mind and body, and rejecting the spiritual aspect of human nature, he was a true scientist who was always willing to modify his theories based on the evidence.

# PARENTS

---

## Varvara Ivanovna Yspenskay

*Helena Koenich  
(From the Koenich Museum archives)*

- info about Varvara Ivanova-
- She lived in Russian.
- She birthday 1890 year. She worked housewife.
