

Dream

what you're
dreaming about

Made by

LucidCatcher, a startup product, is a headband with electrodes that transmit electrical signals to the brain during sleep. Receiving these signals, the person understands that he is sleeping and sees a dream, and therefore, can control them

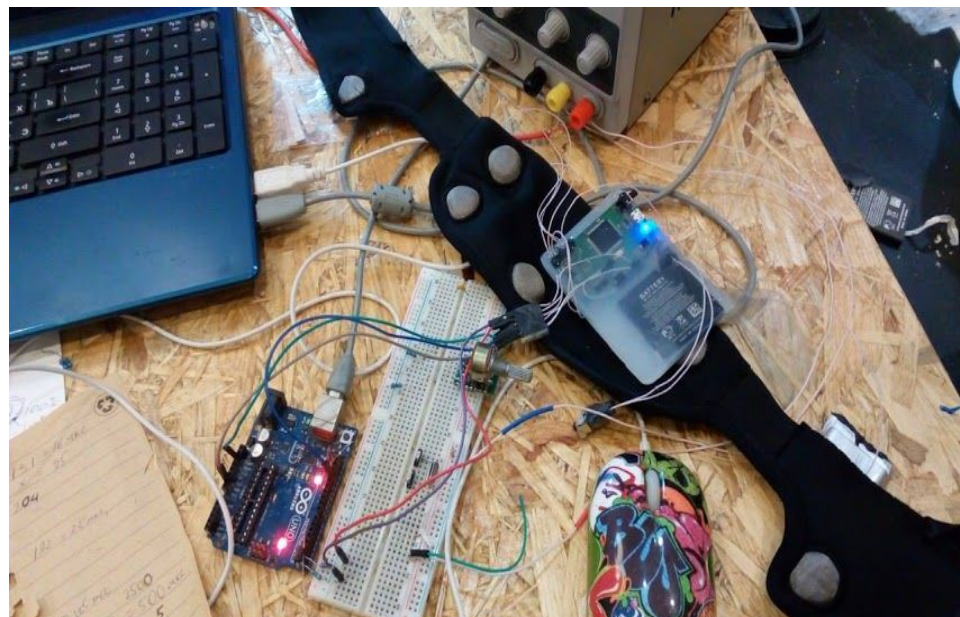

We have a bandage on the forehead with electrodes, which recognize when the dream is dreaming, and transmit the signal through the cerebral cortex. It directly affects the neurons, which increases the activity of the brain and produces a state of higher awareness

Before falling asleep with a bandage on your head, it is recommended that you plan in advance a short plan of action so that in a dream, do not concentrate on it, and immediately begin to implement it without losing time

We let people try to do something in virtual reality

Nikita Annt

CEO, Lucid Dreamer

Project Manager

On the development of the gadget, the startup team spent about 8 months and \$ 10,000. Today, the device Luciding can be bought by pre-order and it will cost \$ 240.

Main investments:

- \$ 15,000 - WannaBiz Business Incubator
- \$ 20,000 is a former Google employee Jack Levin
- \$ 20,000 - Accelerator iQspace
- \$ 87,000 - campaign on Kickstarter
