

The harm of plastic to our planet

How do we fix it?

A large amount of plastic is used for packaging food products and household chemicals

Every year 8 million ton of used plastic is thrown to the Ocean!

- Every year 400 000 mammals die because of plastic pollution

Plastic poisons the Earth with toxic chemical substances. Some types of plastic also produce methane

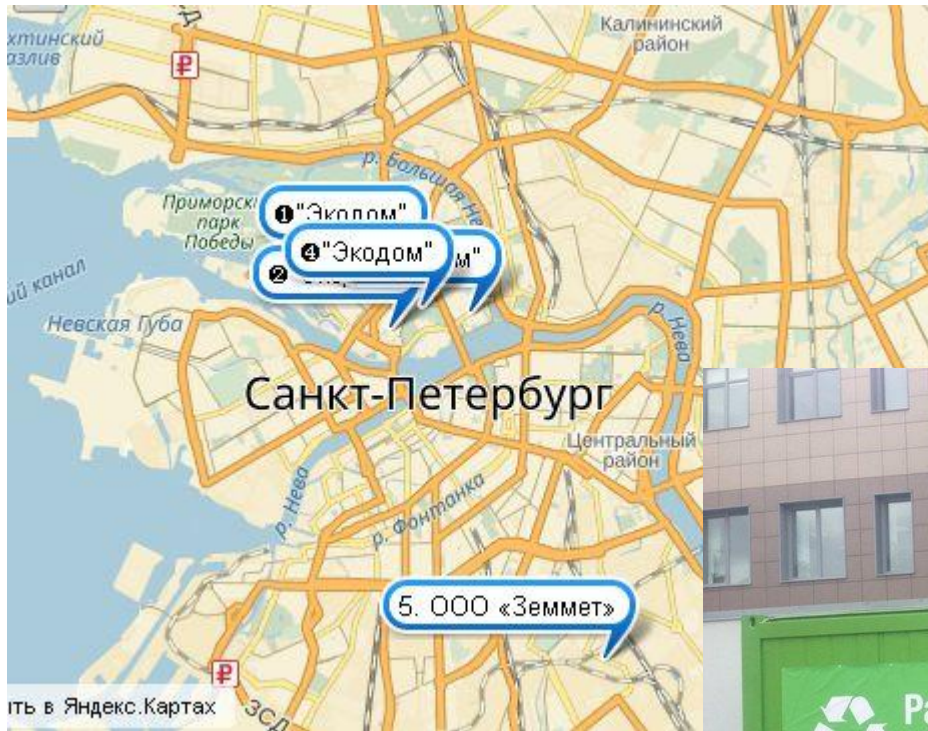

**What can we do with
it?**

The best way to fight plastic pollution is to recycle!

To help this process, we have to sort our garbage and deliver all plastic to special collection point.

Thank you for your attention!
