

TECHNOLOGIES OF THE TOMORROW

Robots

- A robot is a mechanical or virtual artificial agent, usually an electro-mechanical machine that is guided by a computer program or electronic circuitry. With the development of science, robots are becoming an important part of our life.

GADGETS

- A gadget is a small tool such as a machine that has a particular function, but is often thought of as a novelty.
- In the software industry, "Gadget" refers to computer programs that provide services without needing an independent application to be launched for each one, but instead run in an environment that manages multiple gadgets. There are several implementations based on existing software development techniques, like JavaScript, form input, and various image formats.

Electrocars

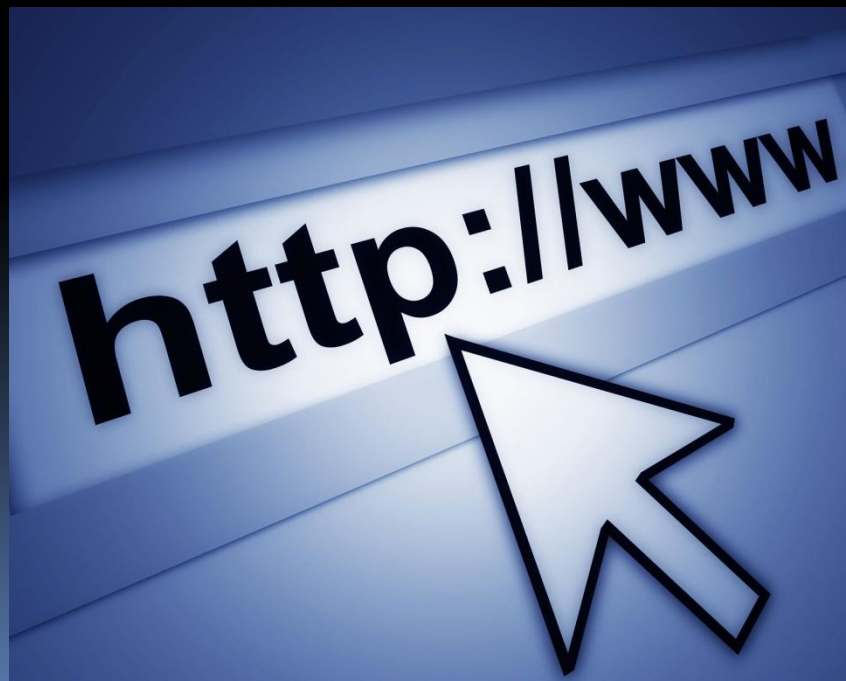

- **Electrocar** is an electric vehicle, typically a small cart with an electrical driving gear and a storage battery. Nowadays, more and more electric vehicles produced. The largest producer of electric cars is the Tesla Motors.

THE NET

- We are all familiar with the World Wide Web. More than 2.5 billion people use the Internet.
- How much time do you spend online?/
