PRESENT SIMPLE

I EAT – Я ЕМ

YOU EAT – ТЫ ЕШЬ

YOU EAT - ВЫ ЕДИТЕ

Y'ALL EAT – ВЫ ЕДИТЕ

WE EAT – МЫ ЕДИМ

THEY EAT – ОНИ ЕДЯТ

PRESENT SIMPLE

HE EATS – OH ECT
SHE EATS – OHA ECT
IT EATS – OHO ECT

PRESENT SIMPLE

I DON'T EAT – Я НЕ ЕМ

SHE DOESN'T EAT – ОНА НЕ ЕСТ

PRESENT SIMPLE

DON'T YOU EAT – ТЫ НЕ ЕШЬ?
DOESN'T SHE EAT – ОНА НЕ ЕСТ?

PRESENT SIMPLE

1) РЕГУЛЯРНЫЕ ДЕЙСТВИЯ

I OFTEN WATCH YOUTUBE

ANNA STUDIES ENGLISH EVERY SATURDAY

PRESENT SIMPLE

2) ДЕЙСТВИЕ В НАСТОЯЩЕМ

WE LIVE IN KURGAN

YOU LEARN ENGLISH

PRESENT SIMPLE

3) ОБЩЕИЗВЕСТНЫЕ ФАКТЫ

THE EARTH IS ROUND

ONE BYTE IS EIGHT BITS

PRESENT SIMPLE

SHE EATS AN APPLE
YOU PLAY THE GAME
HE LOVES HER
SHE DOESN'T LOVE HIM
THEY ARE NOT HAPPY
HE DRINKS BEER
SHE COMES TO HER MUM

PRESENT SIMPLE

THE BEER TASTES AWFUL
MUM TALKS TO HER
HE SENDS HER FLOWERS
SHE LIKES FLOWERS VERY MUCH
SHE FORGIVES HIM
THEY ARE IN LOVE AGAIN
THE STORY ENDS HERE

PRESENT SIMPLE

ЗЕМЛЯ – ТРЕТЬЯ ПЛАНЕТА ОТ СОЛНЦА

ОН ЕСТ ПИЦЦУ

ОНА СМОТРИТ ТЕЛЕВИЗОР

PRESENT SIMPLE

ОНИ УЧАТСЯ В КОЛЛЕДЖЕ

Я ХОЖУ НА РАБОТУ КАЖДЫЙ ДЕНЬ

ОНА ПРИНОСИТ МНЕ КОФЕ КАЖДОЕ УТРО

Larry Zottarelli, the last original Voyager engineer still on the project, is retiring

While there are still a few hands around who worked on the original project, now the job of keeping this now-interstellar spacecraft going will fall to someone else. And that someone needs to have some very specific skills.

Yes, it's going to require coding, but it won't be in Ruby on Rails or Python. Not C or C++. Go a little further back, to the assembly languages used in early computing. Can you breeze through Fortran? Then you might be the person for the job.

YOU HAVE A FEW TASKS AHEAD OF YOU AND ABOUT 64 KILOBYTES OF MEMORY TO WORK WITH

The stakes are especially high for the financial industry, where an estimated $3 trillion in daily commerce flows through COBOL systems. The language underpins deposit accounts, check-clearing services, card networks, ATMs, mortgage servicing, loan ledgers and other services.

The industry's aggressive push into digital banking makes it even more important to solve the COBOL dilemma. Mobile apps and other new tools are written in modern languages that need to work seamlessly with old underlying systems.

That is where COBOL specialists come in.

R

statisticians are utilizing R for its incredible statistical computing power. R is an open-source programming language, which makes it even more appealing.

Mathematical data miners are also known for using R because you can make all sorts of programs for running through data quickly and mining data without any extra work involved. Because of this, the popularity of R has increased quite a bit in recent years.

```r
# R program for matrix multiplication

# Creating matrices
m <- matrix(1:8, nrow=2)
n <- matrix(8:15, nrow=4)

# Multiplying matrices using operator
print(m %*% n)
```

What is NumPy?

NumPy is the fundamental package for scientific computing in Python. It is a Python library that provides a multidimensional array object, various derived objects (such as masked arrays and matrices), and an assortment of routines for fast operations on arrays, including mathematical, logical, shape manipulation, sorting, selecting, I/O, discrete Fourier transforms, basic linear algebra, basic statistical operations, random simulation and much more.

SciPy library

. It provides many user-friendly and
efficient numerical routines, such as routines for numerical integration, interpolation, optimization, linear algebra, and statistics.

```
# iterate through rows of X
for i in range(len(X)):
    # iterate through columns of Y
    for j in range(len(Y[0])):
        # iterate through rows of Y
        for k in range(len(Y)):
            result[i][j] += X[i][k] * Y[k][j]
```

C

C and C++ provide multiple uses, so you're not only going to find these in the math field. In fact, they are more general in terms of programming, but they stand strong for mathematical programs.

Overall, C has a solid reputation when you're trying to get something done quickly. The processing speed is one of its best qualities, seeing as how many students are known to write small C programs in order to process repetitious problems.

```
void multiplyMatrices(int firstMatrix[][10], int secondMatrix[][10], int mult[][10], int
{
        int i, j, k;

        // Initializing elements of matrix mult to 0.
        for(i = 0; i < rowFirst; ++i)
        {
                for(j = 0; j < columnSecond; ++j)
                {
                        mult[i][j] = 0;
                }
        }

        // Multiplying matrix firstMatrix and secondMatrix and storing in array mult.
        for(i = 0; i < rowFirst; ++i)
        {
                for(j = 0; j < columnSecond; ++j)
                {
                        for(k=0; k<columnFirst; ++k)
                        {
                                mult[i][j] += firstMatrix[i][k] * secondMatrix[k][j];
                        }
                }
        }
}
```
