

How to save electricity.

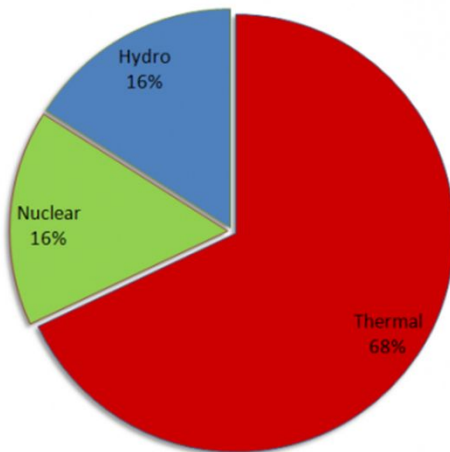

By Ilia Martynovich

This chart shows where Russia gets its electricity

Most electricity in Russia is generated by burning coal and other fossil fuels. That are very bad for environment. The other part by harmless Hydro and atomic power plants.

Russian Electricity Production by Source (2008)

A large offshore wind farm is shown in the ocean. The wind turbines are arranged in a long line, receding into the distance. The sky is a deep blue with wispy white clouds. The water is dark blue with some whitecaps. The text is overlaid on the left side of the image.

As opposed to Russia, Denmark set up a record of using wind turbines. It reached over 42% PERCENT of all generated energy. But its not surprisingly for the country, where winds are blowing during all the year.

Saving electricity doesn't just save money, it also saves energy.

It means less pollution. You don't see or smell any pollution when something runs to no purpose. But the pollution is there—it just happens at the power plant, not on-site.

You got the situation and want to know how to save energy at home.

First of all turn off the electrical appliances in your house if they are running unnecessarily. Turn them on only when required.

Do not put your television set on the standby mode. Instead, turn it off completely when you are not watching it.

Turn off the lights and fan when you leave the room.

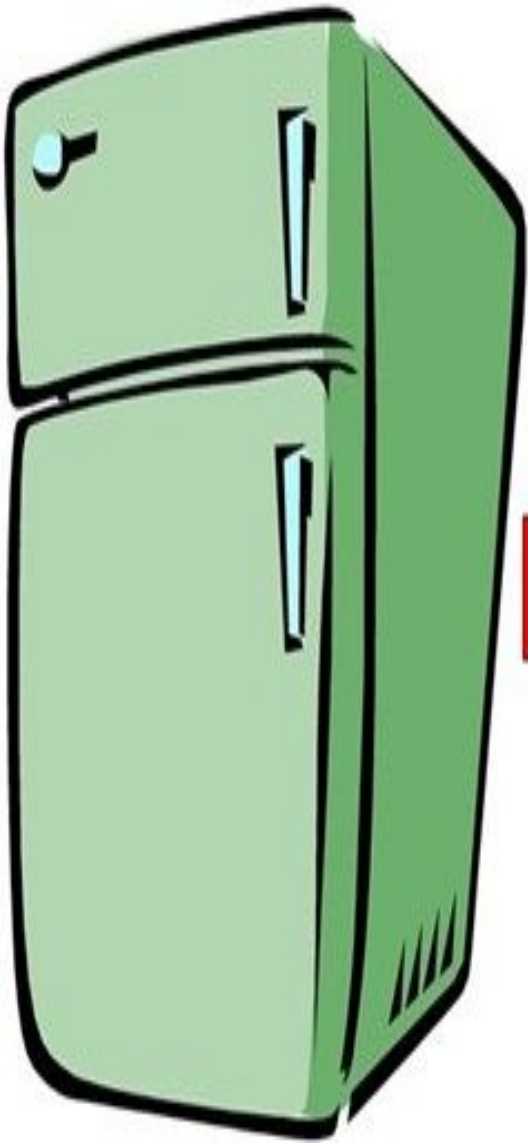

Turn off the computer when you are not using it.

Replace all the halogen and incandescent bulbs with Compact Fluorescent Bulbs. They are useful for cutting down the electricity bills and are also less harmful for the environment.

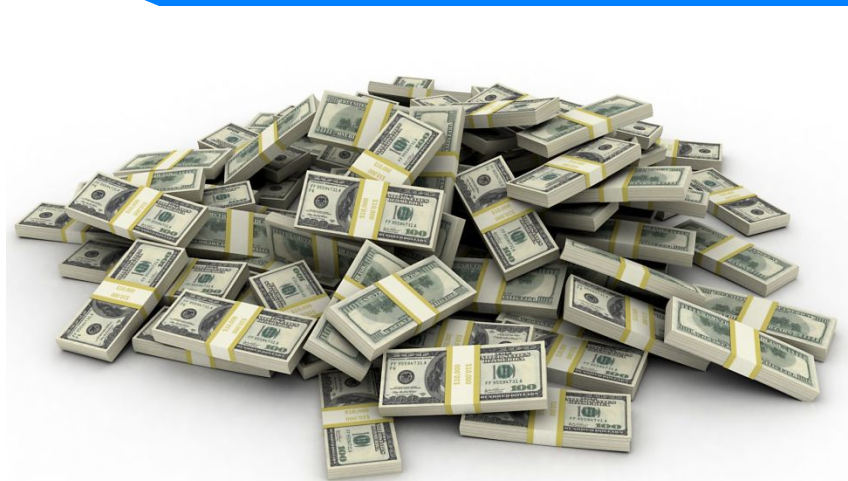

Try to use the fan instead of the air conditioner so that less electricity is consumed. while washing the dishes you should avoid the use of dish washer machine.

Replace the old household electrical appliances with new and more efficient gadgets, which use less power while running.

If you want you can set own solar system. The big advantage is selling this energy another companies. So making money from electricity is possible too.
