

FUTURE OF TECHNOLOGY AND NEWEST INVENTIONS

The future of technology

- ▣ will be determined by usability combined with simplicity.
- ▣ Technology has changed the way we communicate, the way we socialize, the way we travel, it has simplified the way we learn, it has changed our homes and lifestyles and it has created many opportunities.

Future of Computer Technology:

- ▣ This is a fancy computer for the future. In the coming future, computers will have applications which will allow users interact with them using electronic sensors like web-cams.

HOLO Next Generation Wearable Computer:

- ▣ This will be a great invention, this computer device is wearable and portable, forget about the so called slim note books, this wearable computer is portable and has a fabulous design. It is equipped with ecological power source.

Future of watch technology:

This is one of the most fabulous watches of the future designed by F.Bertrand. It has a very simple and unique design. The functions of this watch are so amazing

The future of home technology : Integrated automated systems

- With this technology, home owner will be in position to automate their homes and control their homes via smart phone. That sounds good and flexible. Future technology must be user friendly and applicable in our daily lives.

Future Classroom technology:

- ▣ All lessons in this future classroom are conducted with electronic educational tools, the class uses electronic interactive white boards as well personal display monitors for each student. A teacher can be in position to monitor a students performance and assist them as. All subjects will be in real-time and example or lessons will be more visual and personalized

**Thanks
