

Global warming

We live

in a time of technological progress, use the benefits of civilization and do not think about the consequences

Meanwhile, the climate on Earth is changing very quickly

□ **Glaciers are melting...**

□ **Volcanoes are waking up...**

□ **New ozone holes are appearing.**

People contribute to all this.

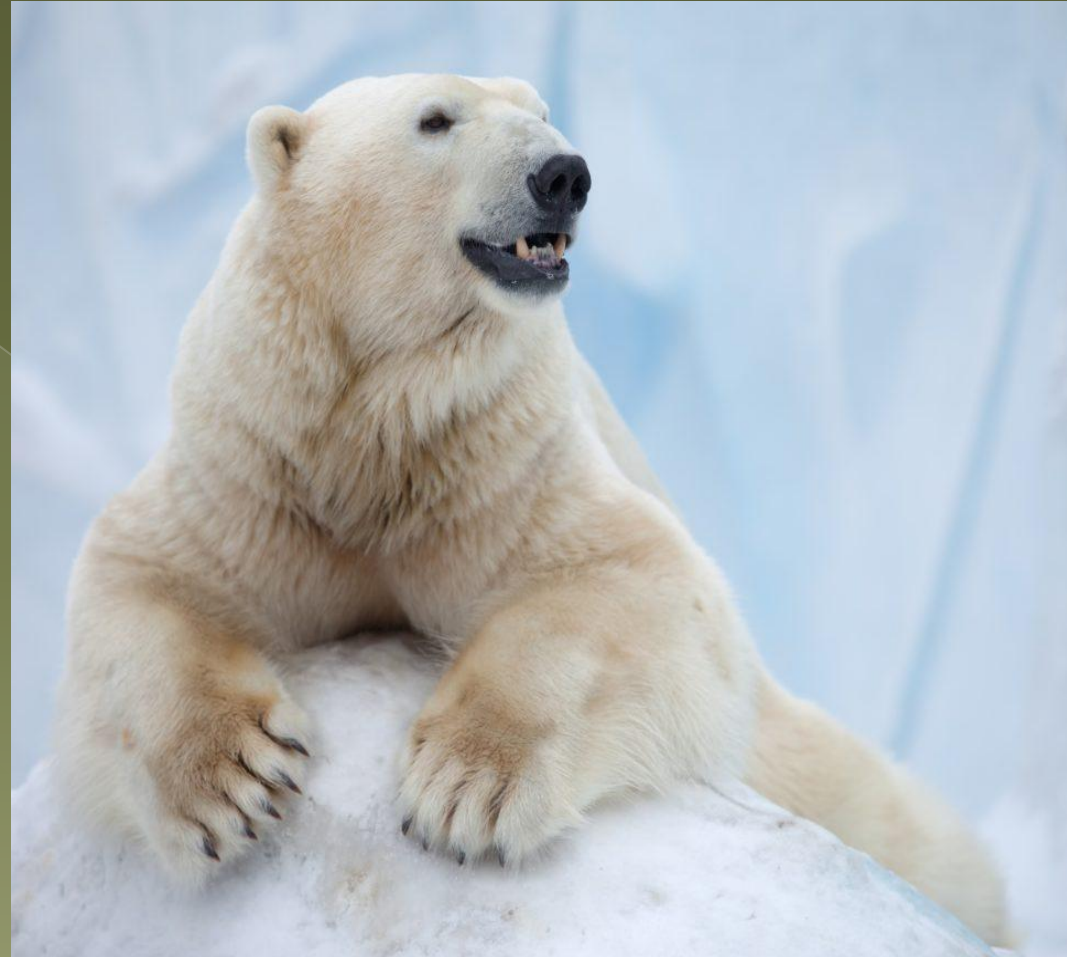

- ✓ We need everyone to think about the consequences of global warming and start taking care of our planet. Needed to follow the consumption of gasoline and electricity, and dispose of garbage as intended.

- In this year we received another warning about global warming. For the first time in the history of observation, the Laptev sea did not freeze in time. What happens if it doesn't freeze at all?

- **Polar bears will not be able to migrate to the other side of the land where seals live!**

**We must
stop global
warming
and save our
planet!**

Thanks for attention! <3
