

Wonders of nature

Red Beach

- In China, in the delta of the Liaohe River near the city of Panjin, there is a beach of the same name. In summer, this beach is not much different from other beaches on the planet. But with the onset of autumn, Panjin beach is colored in blood-red.

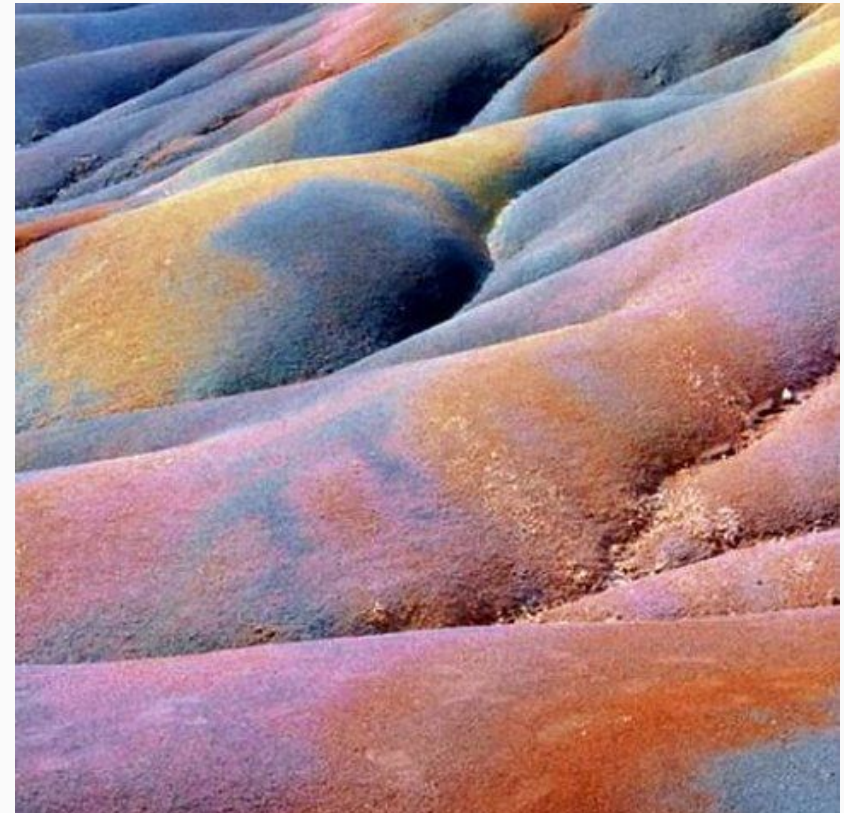

Devil's Tower

- In the United States in Wyoming, in the heart of the Great Plains, a mysterious tower called the Devil's Tower is located, above the origin, which is still argued by scientists. Besides the fact that this natural monument is striking in its size (the height of the tower is 1556 meters above sea level), its relief is no less mysterious.
- The entire surface of the tower is cut through straight grooves, looking at which it is difficult to imagine that it was not man who created them.

The seven-colored lands of Chamarel

- On the island of Mauritius, near the village of Sharmel, there are multi-colored sand dunes, looking at which it is difficult to believe that nature created them without human intervention. It still remains a mystery how the sands of seven colors manage to create various fancy patterns, while maintaining a prerequisite - not to mix with each other.

Geyser Fly

- Fly Geyser is located in Nevada, USA. And let the beginning of the geyser was due to the actions of people (in search of oil, drillers reached the underground lake, realizing that there is no oil, stopped the exploration), 40 years later, nature completed the people started and created an unusual beauty geyser. Therefore, we boldly attribute Fly Geyser to the wonders of nature.

Lake Hiller

- The pink pearl of Australia is a beautiful lake! It is located on about. Middle, near the western coast of Australia. Framed by white white crystals of white salt, the lake resembles a large gem. Until now, scientists can not solve the riddle of this lake - why it has such an unusual pink color?

Danxia landform

- This phenomenon is called the Danxia landform (Pink Cloud) and is located in northwestern China, near the village of Zhangye.

Eye of the Sahara

- Name of this miracle of nature is Eye of the Sahara. Located in Mauritania. Now this large natural formation of an ideal round shape, resembling the eye, attracts photographers and tourists from all over the world. But for the first time, the Rishat Structure was captured from space. The astronauts were quite surprised when they saw how the eyes of the desert were fixed on them.

Grand Prismatic Spring

- A large Prismatic spring is located in Yellowstone National Park in the United States. Another eye of the Earth is the sky-blue in the center, turning into emerald green and bordered with brightly fiery divorces. This is truly anomalous zone on our planet.
- Compared with other sources, its temperature when immersed inside increases several times faster. For example, in springs located in Central Russia, when diving at 100 m, the temperature rises by only 2-3 degrees, while with the same immersion in the Grand Prismatic Spring, the temperature rises already by 60 degrees. As a result, at the very epicenter of the Great Prismatic Source, the temperature reaches 800 degrees!
