

**PRESENTATION ON THE
TOPIC : “INTERESTING
ANIMALS”**

Penguins

I want to talk about birds that can't fly. These are penguins.

Underwater penguins can move with the speed of 40 km/h and dive to a depth of 100 m. On land they can walk with the speed of 2 km/h, but they can walk 100 km without relaxing.

PENGUINS EAT FISH AND
DRINK SEA WATER.

TO HAVE OFFSPRING
THEY LAY EGGS.

Penguins live in the Southern Hemisphere. There are about 18 different types of them. The largest penguin is the Emperor.

Many scientists believe that these extraordinary birds are most mysterious and interesting creatures in the world.

**THANKS FOR
ATTENTION.**
