

Гусеница

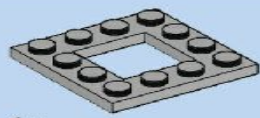

Открытая тема

Гусеницы имеют мягкое вытянутое тело. Крыльев у них нет. Многие имеют яркую окраску и красивое опушение или выросты. Питаются в основном растительной пищей.

Гусеница - это злостный вредитель. У неё много врагов. Она является особым лакомством для птиц, но с помощью различных уловок им удается спастись от гибели. Некоторые гусеницы похожи на ветки и сучки, а другие маскируются под цвет листьев. Гусеница раковидного мотылька способна даже обрызгать врага кислотой.

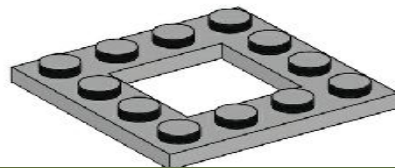

Достигнув определённого возраста, гусеницы окукливаются и скоро превращаются в прекрасное создание - бабочку.
