Introduction

Etiquette is defined as a "code of polite behaviour in society and social groups".

Origins of Internet Ethics

Begun as a vehicle for experimental network research in the mid-1970's, the Internet has become an important national infrastructure.

RFC 1087 went on to state that: "access to and use of the Internet is a privilege and should be treated as such by all users of this system".

“DO NOT” list

- 1) Seek to gain unauthorized access to the resources of the Internet.*
- 2) Disrupt the intended use of the Internet.*
- 3) Waste the resources of the Internet.*
- 4) Destroy the integrity of Internet based information.*
- 5) Compromise the privacy of Internet users.*

Expanded List of Netiquette

Netiquette tends to comply with the 'five pillars of ethics' provided by the Internet Activities Board (IAB) in 1989.

How Netiquette Has Evolved?

Netiquette, as a term, was probably first recognized upon Usenet; one of first systems on the Internet that provided open discussion and debate.

Internet Grammar: Emoticons and Abbreviations.

Emoticons are images, inserted into text communications, that help to disfuse misunderstandings and convey mood.

Abbreviations are commonly used in text communication: as they help to save time and effort for commonly written phrases.

Conclusion

Summing up our work, we would like to note again the importance of implementing the rules of networks etiquette behaviour and ask everyone not to forget about it in real life.

Because “All human beings have feelings”
