# Human body

- The human body is the physical structure of a person, the human body. The human body is formed by cells of various types, which are characteristically organized into tissues that form organs, fill the space between them, or cover the outside. The body of an adult is made up of about thirty trillion cells. Cells are surrounded by an intercellular substance that provides their mechanical support and carries out the transport of chemicals.

# Human skeleton

- bone
- jaw
- joint
- rib
- skeleton
- skull
- spine

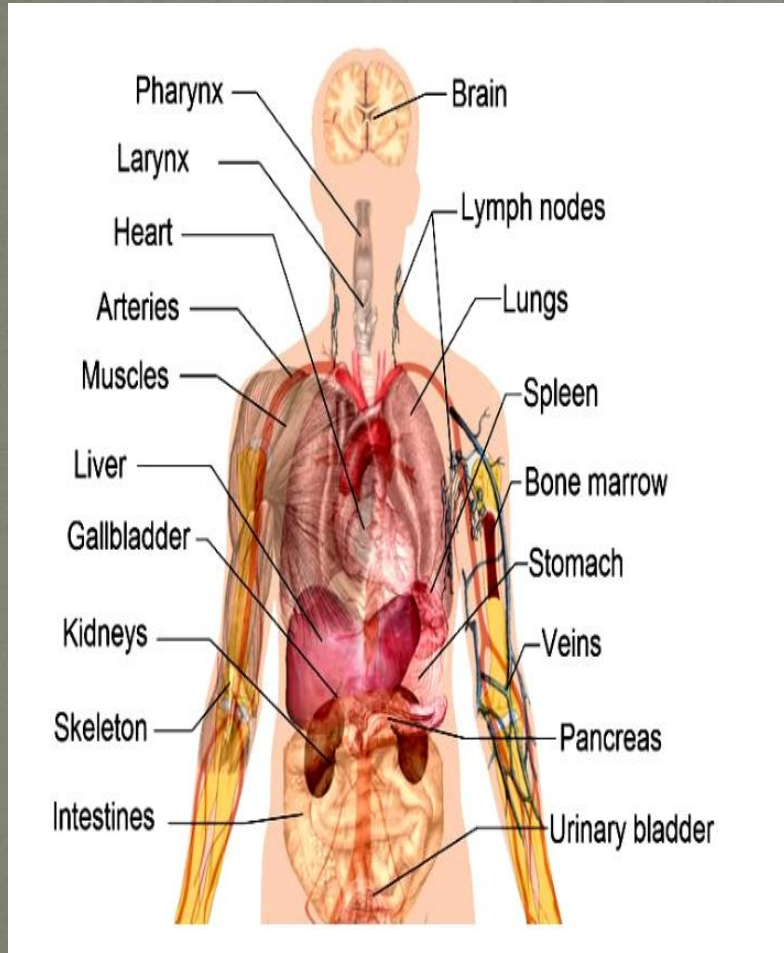

# Body

- back
- belly
- breast
- buttocks
- chest
- genitals
- button
- neck
- pelvis
- shoulder
- waist

# Human organs

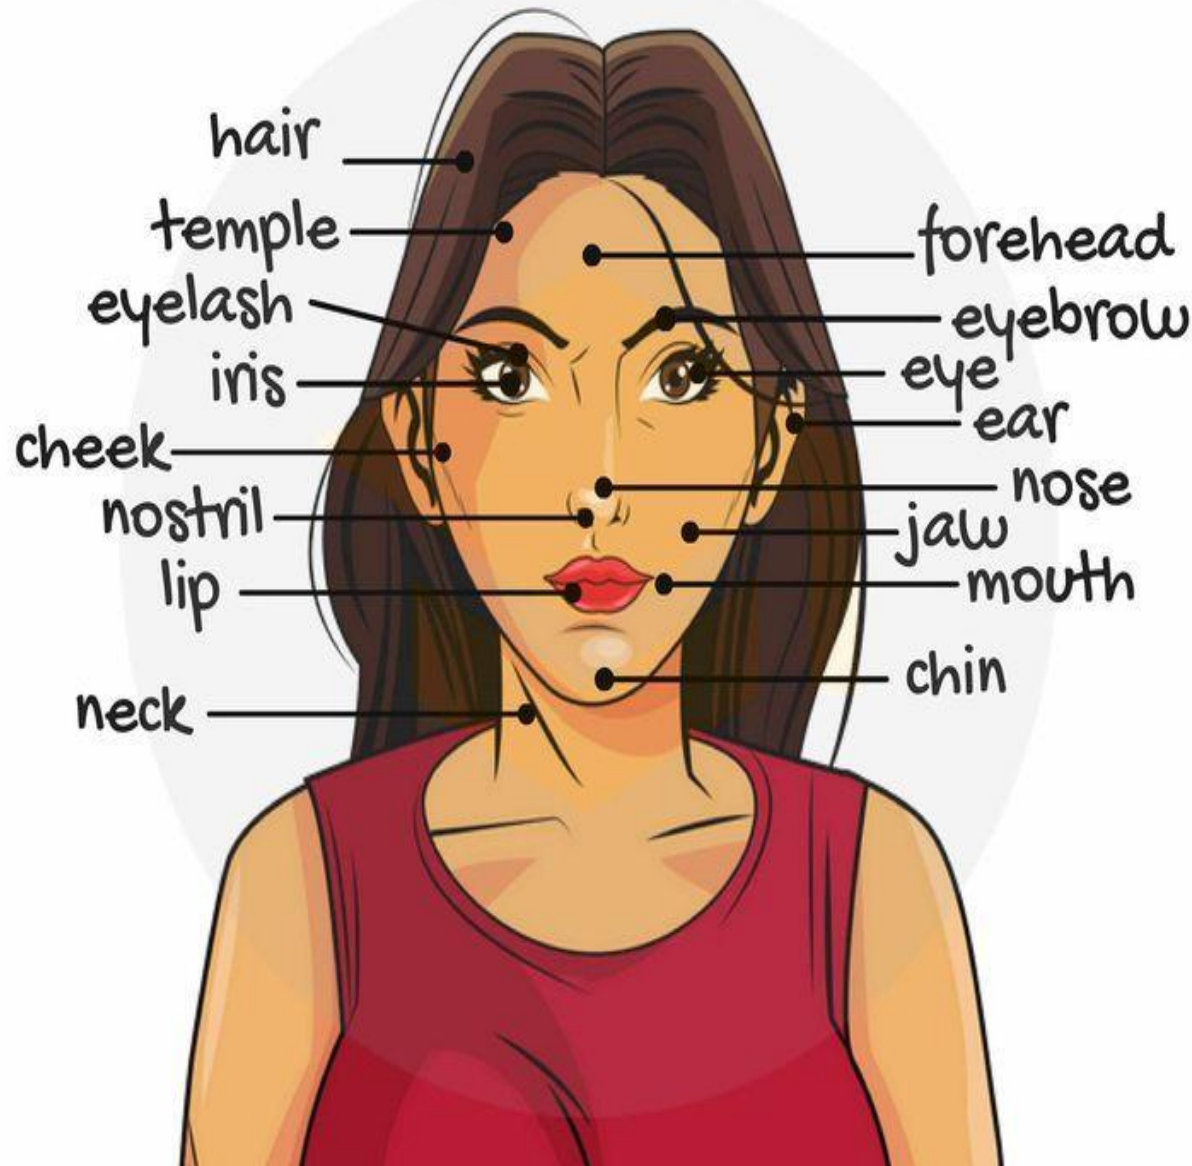

- brain
- gallbladder
- heart
- kidney
- large intestine
- liver
- lungs
- pancreas
- skin
- small intestines
- spinal chord
- spleen
- stomach
- urinal bladder

# Head

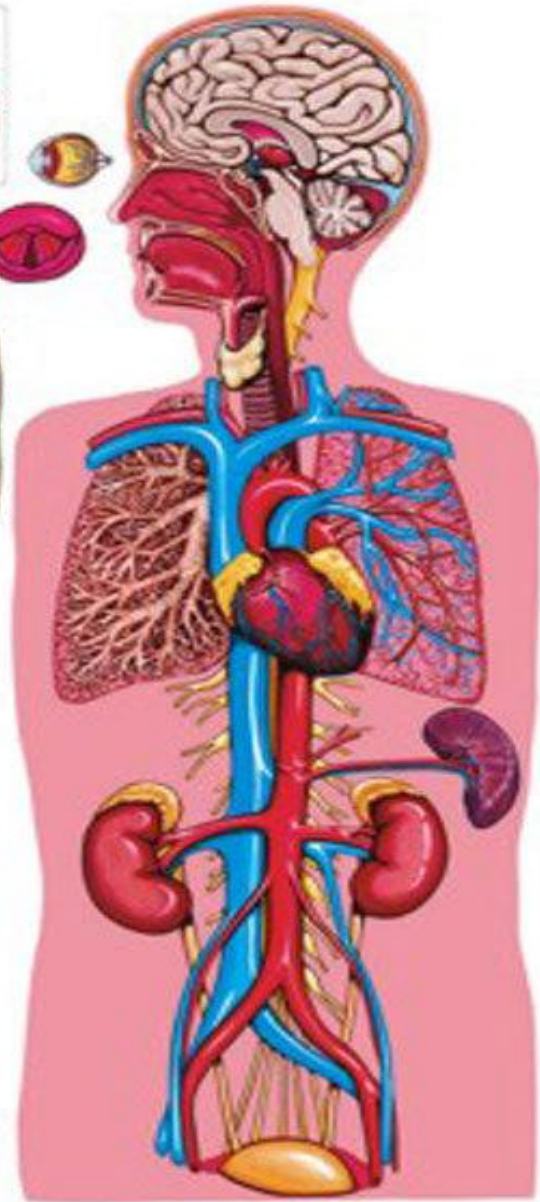

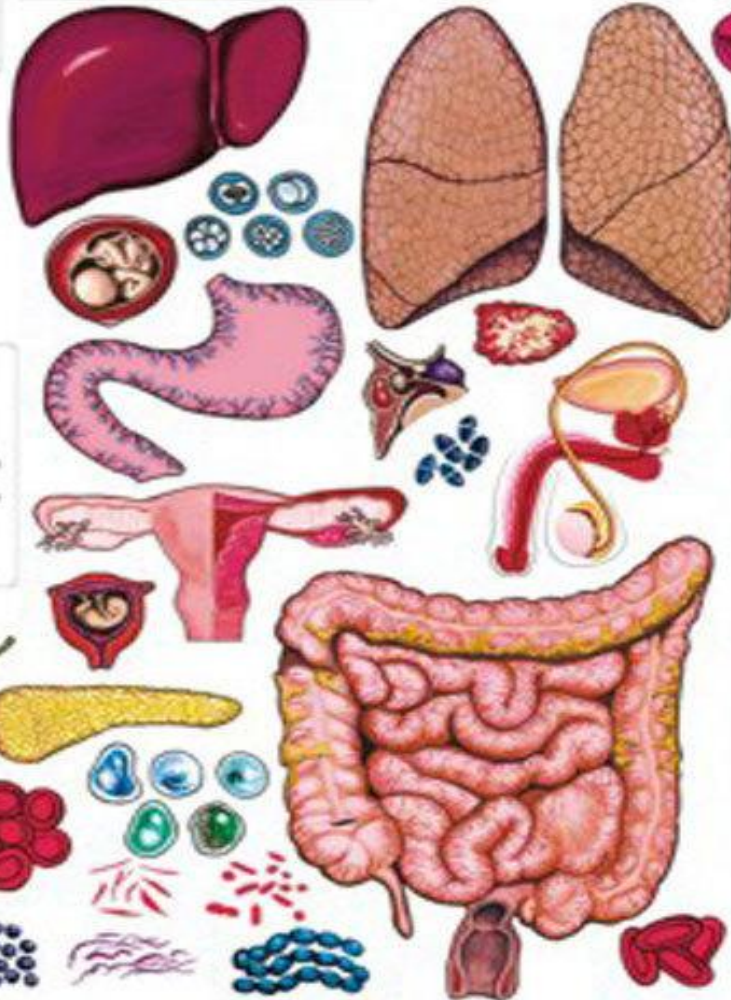

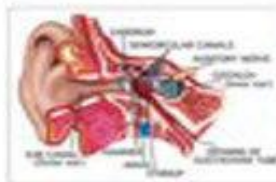

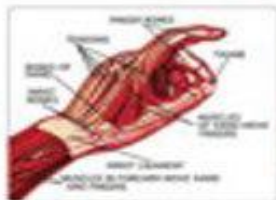

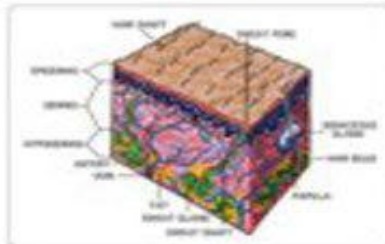

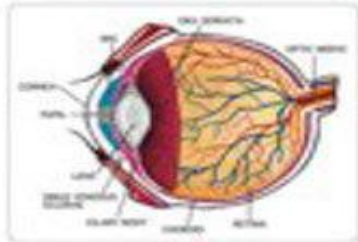

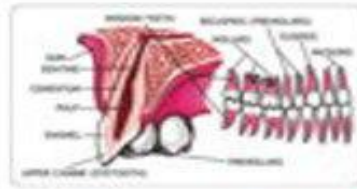

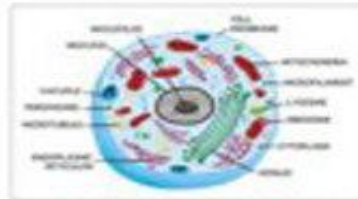

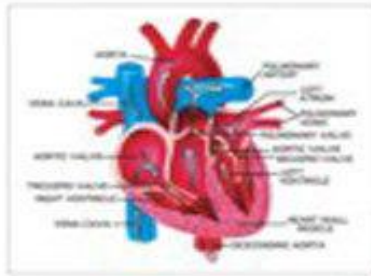

- ☐ cheek
- ☐ cheekbones
- ☐ chin
- ☐ ear
- ☐ eye
- ☐ eyebrow
- ☐ eyelid
- ☐ eyelash
- ☐ forehead
- ☐ hair

- ☐ iris
- ☐ lip
- ☐ mouth
- ☐ nape back of the head
- ☐ nose
- ☐ nostril
- ☐ pupil
- ☐ tongue
- ☐ tooth
