

Highway construction.

Prepared by: Maruschak V.V.

Highway construction.

- Highways have always been one of the oldest forms of transportation.

The Structure of human society is closely connected with highway communications. The highway has always been an important part of the economy, and life in General.

A highway is a way of communication; a strip of land for movement; an integral part of the transport infrastructure.

Highway construction is a construction industry that deals with the design, construction, repair, and maintenance of highways.

Highway around the world are so full of their diversity that they are usually classified into different categories.

Depending on the value:

- Federal significance.
- Regional or intermunicipal significance.
- Highways of local importance.
- Private highways owned by various individuals and legal entities.

Highway construction.

- Highways construction is a complex, expensive activity, even in the most favorable natural and climatic conditions. The highway must meet a variety of requirements for quality, reliability, durability, throughput, ease of use and maintenance, and much more.

Highway classes.

Highways can be divided into three classes:

1. Motorway.
2. Speedway.
3. A non-high-speed highway or a regular highway.

- At all times, highways have always contributed to the growth and formation of States, the development of trade and the economy, and the social structure of society.

Insufficient density and high level deterioration of highways communication have already become serious problems for the development of export-import relations with other countries.

A well-developed highway system can turn the geographical features of Russian into its advantages.

Russian without highways is a territory, and with highway it is a power.

Thanks for your
attention.
