

Ecology is one of the most important sciences nowadays.

People have been polluting the planet on which they live for many years. The result is very sad.

A large, vibrant green leaf with detailed vein structure is the central focus. It is positioned above a blue water surface that shows concentric ripples, suggesting a recent splash. The background is a gradient of blue, transitioning from a lighter, almost white glow behind the leaf to a deeper blue at the bottom. The overall composition is clean and natural, emphasizing environmental themes.

The world is our home and we want to see it
clean and beautiful!

**At the same time we take from nature as
we can....**

We cut down forests and build farms, houses, roads and factories on the land.

We make a lot of waste some of which is toxic.

We dump domestic and industrial waste in the country and pour toxic waste into our rivers, seas and oceans.

Cars and factories, plants and power stations pollute the air and make it dangerous to breathe...

**People have to
think about all
these ecological
problems if
they want to
survive.**

РАЗМАЦЬНО НЕ ВЪДНО !

K. D. D. D.

There are some ecological organizations nowadays.

WWF and Greenpeace-are some of such organizations.

They help endangered animals. For example, if the population of some species is very small, it means they can become extinct. Ecologists protect them and try to make their population larger.....

They stop those
people who kill
endangered
animals and
destroy their
habitats.

Countries can open national parks. They are big and usually very beautiful places without buildings. They are homes for animals living freely and also for birds, trees and flowers.

**WE ALL MUST WORK
TOGETHER TO MAKE OUR
PLANET A SAFE AND
BEAUTIFUL PLACE TO
LIVE!!!**
