# PROJECT:THE WAS I'D LIKE TO IMPROVE THE SYSTEM OF EDUCATION

Yadryshnikov and Brylin

9B class

The teachers

- I would like to see teachers teach students according to their individual needs.

- If start teaching students at the level they are at in ways that they can learn so they can is successful in the workplace.

- We need to stop trying to fit all students in the same mold and teach them all the same was.

Resources and time

- I would like to see schools cut down on waste .

- By this i mean waste resources and time.

- I see too much redundancy in paper work when we have computers that can genetate the same pepoгeы we are expected to fill our on paper.

- School marks could be posted on special website, homework and schedule should be there.

The most important thing

- The most important thing that needs to be changed is that children should be taught not simple subjects, but also how to spend and manage their money, how to become successful and other.

THANKS FOR ATTENTION

Have a nice day
