

FIRST TELEPHONE

A telephone is a vehicle for a transmission and reception of sound in the distance.

ALEXANDER GRAHAM BELL

On this case there were numerous spores about that, who the first invented a telephone.

Alexander Bell gave a request in the Washingtonian patent bureau on the invention of February, 14, 1876. This very day inventor Elisha Gray from Chicago gave a preliminary request on "Device for a transmission and reception of vocal sounds a telegraph method".

on June, 25, 1876. Alexander Bell first showed the telephone on the first World electrical engineering exhibition in Philadelphia.

In the future, we invent many different types of connections : Cell Phone , Field Telephone, Satellite Telephony, IP- phone

Along with the phone , so there were the telephone hooliganism and fraud , spam and echo.

Cell Phone - Communication anywhere

Satellite phone - transmitting information directly via a dedicated communications satellite. The scope of coverage can be either the entire Earth , or only specific regions .

Field Telephone - primarily designed for communication during combat .

IP- phone - to transmit voice , digitized and compressed using digital techniques through networks built IP-enabled . For example, over the Internet.

Before the invention of telegraphs and telephone for passing of messages on large distances ordinary methods were used, like a sing, gong, smoke signals or drumbeat. For example, a shot from a rifle is audible in the distance approximately ten kilometers

Phone - helps
