

Cyberfork 100

Description

Cyberfork 100 is state-of-the-art pallet forklift utilizing AC driver motor for quick response, precise control and prolonged battery life. The fork is especially design for remote operations with 360 degree natural vision camera along with a suite of safety features for avoidance detection and safe handling within a customer's facility. The device is connected through standard Wifi protocols, or 5G where available. CONNECTIVITY is what distinguishes the Cyberfork from all others. For efficient operation, the forklift is equipped with two-way voice communication to provide immediate instructions on the work floor. Furthermore, the Cyberdrone platform enables the customer to conveniently communicate with the operator in real-time through voice, text, and file transfer to provide work instructions. The pallet lifts stream vital performance data to insure long life operation as well as uninterrupted service. Cyberfork 100s are offered in three capacities for light, medium and heavy duty operation.

Cyberfork 200
