THE HISTORY

National Geographic, formerly ***The National Geographic Magazine***, is the official magazine of the National Geographic Society. It has been published continuously since its first issue in 1888, nine months after the Society itself was founded. It primarily contains articles about geography, history, and world culture. The magazine is known for its thick square-bound glossy format with a yellow rectangular border and its extensive use of dramatic photographs.

The magazine is published monthly, and additional map supplements are also included with subscriptions. It is available in a traditional printed edition and through an interactive online edition. On occasion, special editions of the magazine are issued. As of 2015, the magazine was circulated worldwide in nearly 40 local-language editions and had a global circulation of approximately 6.5 million per month according to data published by The Washington Post (down from about 12 million in the late 1980s) or 6.7 million according to National Geographic. This includes a US circulation of 3.5 million.

The first issue of *National Geographic Magazine* was published on October 22, 1888, nine months after the Society was founded. Starting with its January 1905 publication of several full-page pictures of Tibet in 1900–1901, the magazine changed from being a text-oriented publication closer to a scientific journal to featuring extensive pictorial content, and became well known for this style. Among its more recent issues, the June 1985 cover portrait of 13-year-old Afghan girl Sharbat Gula, shot by photographer Steve McCurry, became one of the magazine's most recognizable images.

Sharbat Gula - **Afghan Girl** is a 1984 photographic portrait by journalist Steve McCurry which appeared on the June 1985 cover of *National Geographic*. The image is of a young woman with green eyes in a red headscarf looking intensely at the camera. It has been likened to Leonardo da Vinci's painting of the Mona Lisa and has been called "the First World's Third World *Mona Lisa*". The image became "emblematic" of "refugee girl/woman located in some distant camp" deserving of the compassion of the Western viewer.

Gilbert Hovey

Grosvenor (October 28, 1875 – February 4, 1966), father of photojournalism, was the first full-time editor of *National Geographic Magazine* (1899-1954).

Grosvenor is credited with having built the magazine into the iconic publication that it is today.

As President of the National Geographic Society, he assisted its rise to one of the world's largest and best known science and learning organizations, aided by the chronicling in its magazine of ambitious natural and cultural explorations around the globe.

ALEXANDER GREK

The chief editor of the Russian magazine National Geographic. Since October 2003, the magazine is published in Russian («National Geographic Russia”).

ON WHICH OF LANGUAGES THE MAGAZINE IS PUBLISHING AROUND THE WORLD
