

# LLC "Volynspetstekhnika LTD" (Ukraine, Lutsk)

has been carrying out activity on peat briquettes supply since 2014.

**WE'RE OFFERING YOU TO GAIN AN ADVANTAGE IN EUROPEAN SOLID FUEL MARKET BY PURCHASING ENVIRONMENTALLY FRIENDLY PRODUCT – PEAT BRIQUETTES AT FACTORY PRICES.**

**COMPARED TO OTHER TYPES OF SOLID FUEL WITH SIMILAR COMBUSTION HEAT CHARACTERISTICS, PEAT BRIQUETTES ARE 25-35 % LESS COSTLY.**

# Peat briquette is a solid biofuel at an affordable price

It is characterized by high energy efficiency, for instance increased caloric content, long burning and heat production duration. All of these things prove that peat briquettes are perfect for heating. Moreover they help to cut costs significantly during winter.

extraction of peat

# The advantages of peat briquettes include:

- ▶ ecological cleanness (it is worth buying peat briquettes as biofuel);
- ▶ possibility of application for different types of solid fuel boilers, fireplaces, stoves etc .;
- ▶ high caloric value as well as high heat output and long burning duration, and as a result – significant reduction in heating costs;
- ▶ using for both production premises and living quarters heating;
- ▶ convenient and simple ignition;
- ▶ possibility of round-the-clock heating (no need to put some more for 6 hours)
- ▶ combustion without release of harmful substances and odor that makes it possible to use these briquettes for house heating;
- ▶ low prices;
- ▶ high heat output – up to 5500 kcal/kg (one briquette burns for 9 hours!);
- ▶ being a completely organic, natural material without chemical impurities and therefore with no harm to health;
- ▶ high moisture resistance;
- ▶ possibility to use ash as a natural fertilizer for soil after combustion (it improves soil structure, promotes absorption of microelements by plants, protects them from pests).

# LLC "Volynspetstekhnika LTD" offers beneficial cooperation and effective relationship. Product quality meets the characteristics such as below.

Peat briquettes characteristics:

- ▶ – length 188 mm
- ▶ – width 20-75 mm
- ▶ – height 50-75 mm
- ▶ – humidity 18,6%
- ▶ – ash content up to 17%
- ▶ – content of volatile agents 69,0%
- ▶ – average combustion heat 4500 kcal/kg, 18.76 MJ/kg

# Price List

as of 19.11.2019

Product	Price, €
<b>Peat briquettes:</b>	-
in heat-resistant packaging on pallets (t)	95,00
in Big Bags (t)	85,00
embankment (t)	75,00
